BERRY'S ORIGINAL GENUINE

GRO-COATED[®] FARM

TO PRODUCE BETTER STANDS

GUARANTEE

We guarantee that our Gro-Coated Brand Grass and Legume seed will give you better stands than any other commercial seed of similar quality sown and grown under the same conditions. If it does not, we will refund you any extra seed cost per acre that you invested in our seed. Reports on stands to be made within 60 days after seeding. Legume seeds are to be inoculated. See page 31.

MOST SENSATIONAL SEED GUARANTEE EVER MADE

You buy and sow seeds because you want stands of grasses and clovers in your fields. That is where your seed investment pays off. We have learned that farmers gladly will pay a little more per pound for seed, if necessary, providing they definitely feel that they will get greater assurance of better stands. That is exactly what we are guaranteeing to you.

This is our fifth year of selling Gro-Coated brand seed. The farm reports have given a tremendous endorsement to this seed. What we have done, in short, is to protect each seed with a special private formula fungicide. The finest seed you can buy may be killed or weakened in the soil by fungi while it is germinating. Seeds with Gro-Coat protection generally make from 15% to 150% more plants because they are protected. That is why we can guarantee them.

TESTED AND PROVED ON THOUSANDS OF FARMS

Gro-Coated 6 Inches Higher

We sowed 60 acres of Gro-Coated seed and it was at least 6 inches higher than the rest of the field. We've always had perfect stands since using Gro-Coated seed.

John Krueger, Kankakee, Ill.

Gro-Coated Amazes Neighbors

My neighbors wanted to know what I did to get such a good stand and why my Alfalfa looked so much thriftier than theirs. I told them that it was Gro-Coated.

Paul Will, Murphysboro, Ills.

Gro-Coated Far Superior

I sowed all kinds of Gro-Coated seeds last spring. Also sowed some non-Gro-Coated seed, but your Gro-Coated seed was far superior. We got better stands, quicker growth and heavier foliage.

Mrs. A. E. Cerveney, Prairie Grove, Ark.

Gro-Coated Seed Is Stronger
The crop from Gro-Coated seed grew more vigorously and didn't die in hot weather. I think the treated seed is stronger seed.

Ethel Carr, Greenfield, Iowa.

First Good Seeding
This is the first time I have ever had a good seeding in a heavy crop of Wheat. It made 42 bu. per acre. I believe the Gro-Coating of the seed caused the crop to come through.

C. Woodward, Tecumseh, Mich.

Gro-Coated Alfalfa Better
I sowed Gro-Coated Alfalfa seed this spring and got an excellent stand. I consider it grew better than non-Gro-Coated seed. The Alfalfa is making a very thick growth.

Wilbur Bell, Cedar Rapids, Iowa.

Gro-Coated Far Ahead
I got a wonderful stand of Alfalfa and Red Clover from Gro-Coated seed. My stand and growth is far ahead of my neighbors who used non-Gro-Coated seed.

Frank Sullivan, Salem, Ind.

No Rain But Good Stand
We sowed Gro-Coated Alfalfa seed. It came and produced a very good stand. Alfalfa seed sowed under similar conditions before made no stand.

M. D. Slaymaker, Warsaw, Ind.

Gro-Coated Surpasses All
The Gro-Coated seed I purchased last spring surpassed anything I have ever tried both in stand and growth. I sowed some this fall, and now have a green carpet all over the field.

H. L. Van Sickle, Farmington, Mo.

Only Gro-Coated Seed From Now On
I sowed Gro-Coated Alfalfa seed at a lighter rate than usual and have a very nice stand. From now on my orders will be for Gro-Coated seed.

Frank J. Fischer, Wacoma, Minn.

Gro-Coated Best Ever Had
Gro-Coated Red Clover and Grass Mixture seed produced an excellent stand. The best I ever had. I sure want it again if I can get it.

Bailey Farms, Marietta, New York.

Gro-Coated Alfalfa Best
In April I planted 6 acres of Gro-Coated Alfalfa seed. I have already taken off 3 crops and the 4th crop is about 10 inches high. It beats anything I ever saw.

J. C. Rice, McCook, Nebr.

Gro-Coated Best Yet
I think your Gro-Coated seed is the best thing yet. I had a lot of Alfalfa and Clover in my Oats straw this year, and I attribute the faster growth to the Gro-Coated seed.

Clyde Beaulieu, Holcombe, Wisc.

Gro-Coated Is Insurance
Your Gro-Coated cost very little. We think it is insurance in a farmer's seedling. Our Gro-Coated Alfalfa grew much faster than non-Gro-Coated seed. The plants have more pep and vigor.

S. C. & C. L. White, Bigelow, Mo.

READ WHAT EXPERIMENT STATIONS SAY

Iowa Experiment Station states: "Always plant treated seed to get better stands of healthier plants." Tests made there also bring out that treated legume seed can be successfully inoculated if applied just before seeding. Pennsylvania states: "Work to date indicates certain seed treatments are of value in increasing Red Clover and Alfalfa stands." Also "Seed treatment may reduce seeding rate considerably." A West Virginia report tells how seeds can be destroyed by rotting and young growing plants may die. The simplest way to

guard against this is to coat the seed with material that is toxic to fungi. The Oklahoma Station says: "Seed treatments increases percentage of seeds that produce plants." In some of their tests with treatment and inoculation they got increased nodulation. Michigan says: "With Alfalfa seed prices high, seed treatment is a wise practice." Colorado got "highly significant increase in stands of grass and Alfalfa by treating seed." These are but a few of many.

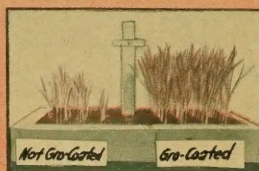

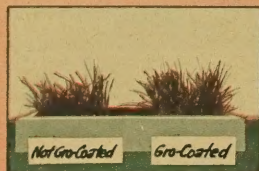

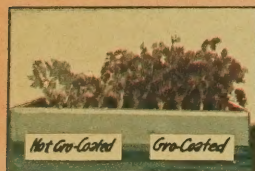

RED CLOVER. Red Clover in greenhouse photo above shows 87% more plants from the GRO-COATED Brand Seed than untreated.

BROME. Brome Grass is different to treat, but it pays off in returns. GRO-COATED brand here made 92% more plants.

OATS. The GRO-COATED brand Seed Oats in this test produced 42% more plants than untreated grains. Note bigger plants.

ALFALFA. GRO COATED brand Alfalfa seed made 58% more plants from the same number of seeds and were more vigorous.

SWEET CLOVER. The GRO-COATED brand Sweet Clover in this test produced 60% more plants than same number of untreated seeds.

UNCONDITIONALLY SEEDS GUARANTEED

STANDS THAN ANY OTHER SEED

THE GREATEST NAME IN SEEDS

This private formula treatment is one of the greatest steps in seed improvement ever made. The name Gro-Coated is a trade-mark registered in the U. S. Patent Office. That term is your assurance of getting seed that will give you more satisfactory results in your fields. Whenever you see the tag and seal described below on a bag, you know you are getting the Genuine time tested protection. Also look for the certificate inside of the bag.

MOST ECONOMICAL SEED YOU CAN SOW

You will probably find that the cost of Gro-Coated brand seed is a little more per pound. The treatment is rather expensive. It requires special machinery to apply it. There is extra handling cost which means more labor. The difference is not great and compared with some prices Berry's Gro-Coated seed may be cheaper.

The real economy comes in two ways — Many farmers have told us they sow less seed per acre. Since more seeds make plants they get excellent stands from lighter seeding rates. Therefore the cost per acre is generally lower. There are other farmers who say they sow at normal rates and get so much heavier stands that they profit in that way. Anyway you look at it, you will find Gro-Coated the most economical seed you can buy. If you judge by results, you'll agree this is true. If you don't get those results, our Guarantee protects you on any extra investment you have made in our seed. How can we be more fair.

MORE THAN A SEED TREATMENT

Gro-Coat treatment has a rooting hormone incorporated into it. That is designed to stimulate root development in the young plants. Look at the color pictures on our catalog envelope. That shows what Gro-Coat protection means. The seeds are left free to produce strong, healthy plants because diseases that might kill the seed are controlled. That's why so many farmers report plants come up quicker and grow faster.

EXTRA CROP INSURANCE

The pictures on the envelope in which this catalog came show how the Gro-Coat treatment disinfects not only the seed, but the area around the seed. It also shows the results that are obtained. Bigger root system—more plants from the same number of seeds. Larger stronger plants. You definitely get greater assurance of better crop stands. Since the development and phenomenal success of Gro-Coated brand seed much "treated" seed is being offered under one name or another. Look at the picture of the dishes to the right. Each one contained a sterile jelly called Agar. On each we placed two seeds. In the top one no protection was given the seed. The second was treated with a nationally known seed treatment, the third with Gro-Coat. Each dish was sprayed with a culture of seed destroying fungi. The top dish was completely covered by the fungus mold. The middle one had some protection, but not enough to kill the fungus. The Gro-Coated brand seed is entirely free of it. Demand it. Accept nothing less.

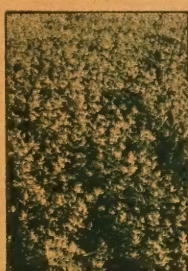

OUR PRICES ARE ALL FOR GRO-COATED SEEDS

Our prices are all for Gro-Coated brand seed. Read our catalog descriptions. All seeds are Gro-Coated brand, excepting some grain crops. The special requirements of some crops make the cost of Gro-Coat quite high in proportion to cost of seed. All of our Clovers, Grasses, Forages, Oats and Corn have the Gro-Coat protection. Please remember that when you compare prices. When you buy seed it isn't so much the cost of the seed, but what do you get in your fields that counts.

Seed rotting organisms are generally most active if cold, wet weather sets in after seeding or planting. You can't control the weather, but you can control the disease by insisting and demanding and sowing only the Original Genuine, Time-tested Guaranteed Gro-Coated brand seed.

UNTREATED GRO-COATED BRAND ALFALFA FIELD PLOTS

Photos below show actual field plot tests. Both are 1/100 of an acre. The GRO-COATED brand Alfalfa plot, at right, had a heavy growth of strong, healthy Alfalfa plants. Untreated plot was thin and spotty with considerable weed growth.

GRO-COATED TAG

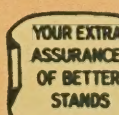

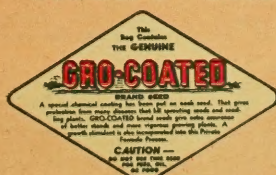

Every bag of genuine GRO-COATED Brand Seed carries the diamond shaped tag and the metal seal attached. Look for this identification on the seed you buy. They are your assurance of getting the one and only genuine GRO-COATED Brand Seeds.

GRO-COATED SEAL

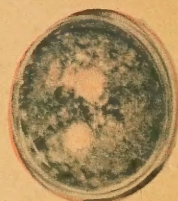

GRO-COATED CERTIFICATE

Inside every bag of genuine GRO-COATED Brand Seed you will find our GRO-COATED certificate. It is your added assurance of getting original GRO-COATED Brand. Instructions regarding inoculation of legume seeds are also included. Look for this certificate in your bag of GRO-COATED Brand seed.

ONLY THE GENUINE GRO-COATED BAGS CARRY THESE ACCEPT ONLY THE GENUINE

BACK FRONT

UNPROTECTED SEED TOTALLY DESTROYED

Laboratory photo above shows unprotected seed kernels that have been killed by disease organisms. It was once a healthy, live seed, but will never make a plant. Entire kernels are covered with disease organisms.

ORDINARY "TREATED SEED" PARTIALLY DESTROYED

There have been many imitations of our famous GRO-COAT process. Above photo shows an ordinary "treated seed." Note that disease organisms have already begun to surround and attack the seed. "Treatment" was not sufficient to destroy the organisms attacking the seed.

GENUINE GRO-COATED BRAND SEED COMPLETELY PROTECTED

Here's further proof of GRO-COAT brand protection. Both kernels have already started to sprout. No disease organism is attacking these GRO-COATED seed. Our special GRO-COAT formula has destroyed the disease organisms. These GRO-COATED kernels will make healthy plants. (Area around seed stained for easier photographing.)

CERTIFIED RESELECT NEMAHA SEED OATS

Has Outstanding Characteristics

This beautiful, big grained heavy meaty oat has been purified through a reselect strain. This variety was developed through the combined efforts of the Iowa, Nebraska and Kansas Experiment Stations working with U.S.D.A. It is a selection of Victoria-Richland with Morota-Bond. Thousands of selections were discarded before this one was chosen. It should also do well in states to east of Iowa. While the original line had some varietal impurities it still was the choice of thousands. The grain resembles Cherokee but the straw is a little taller. Grows about as high as Clinton. Matures two to five days earlier. Straw is heavy. They stand up even when dead ripe.

Grain is light in color shading to a pinkish ivory. Hulls are very thin. The feeding value is high. You will be delighted with the wonderful appearance of this seed.

The variety has resistance to Helminthosporium (Victoria) blight and to common races of smut, crown and stem rust. Has tolerance for races 45 and 57 rust. One processor reports these oats have a larger vitamin B₁ content than any other oat.

Since this reselection has higher varietal purity it can be certified in Iowa and we are proud to offer you this beautiful heavy weight certified seed. We have gone beyond the specifications for certification to produce a truly super quality which is better than most certified seed. You can't buy anything finer. It has the Special Grain formula Gro-Coat protection. They are priced very reasonably considering quality. See item 168 on our price list.

Certified LASALLE OATS

This is a selection from a cross of the excellent oats, Marion, and Clinton. It is about 3 days earlier than Clinton. In Illinois tests it has been higher in yield than Clinton in all parts of the state. In some cases the test weight was a little lower but the percentage of groats, which are the meat of the kernel, were equal.

It has medium stiff straw. Not quite as strong as Clinton, but above most varieties in tests 1947-1950. Grows to about same height. It is tolerant to Race 45 of crown or leaf rust to which most Bond crosses are susceptible. It is resistant to stem rust race 7 and is resistant to smut. The increase of this variety has been delayed due to a severe hail storm destroying most of the crop being grown for seed increase. Now additional supplies are again available. We have been fortunate in getting a fair supply for our trade this year. It is our opinion that this should be a good variety for Indiana, Ohio and other eastern states. It has some susceptibility to septoria blight. The excellent yield records it has made show that it has great merit. We are sure many of our customers will want to get started with them.

Our seed is State Certified stock. You will find it top quality. Since supplies are limited, please order as early as possible. See item 167 on our price list.

The Great New...

MISSOURI O-205

STATE CERTIFIED SEED

A Highly Recommended New Variety

You, no doubt, have read about this variety during the past year, and you will be hearing more about it as spring approaches.

The Mo. O-205 Oats were developed especially for areas where the Columbia oats had been largely grown. They have proven themselves adapted not only to that area but throughout the entire oat belt. This variety has been outstanding. It was reported as the highest yielding

variety in the U.S.D.A. nursery test in 13 states with a yield of 66.4 bushels per acre compared with 53.9 for Clinton. In Iowa tests, this variety produced 73 bushels per acre in central Iowa location as compared with 67 for Clinton, test weight run 3 pounds per bushel heavier. Maturity is a little earlier, the straw is slightly shorter, but only by about two or three inches. The finest characteristics of this Mo. O-205 oats, are the extremely high yielding ability, plus the heavy test weight. The grain is borne on a medium stiff straw. It has resistance to crown rust, stem rust and Victoria blight. Perhaps one of the most important characteristics is its resistance to the new races of Crown rust and Stem rust which are now infesting some of the other well known varieties. We strongly recommend to you that you sow at least a portion of your acreage to this variety. If these new races of rust come into your area they can be thoroughly damaging and may give you a very substantial reduction in yield. Where you have Mo. O-205 Oats in your production you are assured of having some good seed oats available.

Finest Blue Tag Quality

Our seed is certified stock. When a new variety first comes on the market, the demand is always the greatest for certified seed. That gives you complete assurance of varietal purity required by state certifying agencies, and also the good quality from the standpoint of germination. The Mo. O-205 oats therefore, that you will obtain from us will give you the finest quality available.

These seed oats are not as nice to look at as some of the other varieties of oats. The color is not quite as attractive. It is a sort of grayish-white. This is due to the Columbia parentage. For just strictly eye appeal an oat like the Nemaha, described above, or one of our Clintons, or Cherokee would look nicer. However, where you have a serious infestation of these new races of crown and stem rust, these other varieties are not as resistant or as tolerant to it. We therefore, urge the growing of this variety because you don't know how soon these diseases are going to hit your area. If that happens in your section you will thank us for urging you to sow these certified Mo. O-205 Oats.

This variety is still in extremely short supply. These oats have been selling through agents for prices ranging up to \$3.00 a bushel. Remember when a new variety of merit such as this is available Berry's will always have it at prices way below what most others are asking. This is not Gro-Coated Brand but Certified. Sacked 3 bushels per bag. Supply limited so please order at once. See Item 165 on price list.

4 . 2

Dear Sirs:

The Gro-Coated Hubam Sweet Clover grew to a height of 4 feet 3 inches when cut early in September and is making a new growth. Had wonderful germination.

Appleton, N. Y.

D. J. Mandelare

Gentlemen:

I have cut 11 acres of Honest John Alfalfa so far this year. I've cut about 20 tons from 2 cuttings and still have a third cutting to make later.

Bloomfield, Iowa

Palmer Hargrove

Golden Beauty
BRAND

Berry's Special EXTRA HEAVY CLINTON OATS

**Guaranteed to Outyield any
other Clinton Seed Stock**

CLINTONS AT THEIR BEST

We have done a lot of experimenting with seed Oats. Through this experimenting, we have developed a special grading process. Insofar as we know no one else has ever used this method in exactly the same manner or degree that we have used. This method removes at least 30% of the Oats from the average seed harvested. This goes far beyond the requirements for cleaning certified seed. This special handling shows up in the crop to a very noticeable degree.

RESULTS OBTAINED

We sowed our Golden Beauty brand of Clintons next to certified Clintons and they looked like a different variety of Oats. The soil was the same, but the Golden Beauty brand stood about 6 inches higher in the field. Many farmers sowed those Oats and we have yet to hear from one who was not enthusiastic. Some of our most prominent farmers in this area who grow different varieties have told us our Golden Beauty brand Clintons were the best they had on their farm. Yield increases of 10 to 15 bu. per acre were reported.

In the official Story County Iowa yield contest, these Oats were first and about 15 bu. ahead of the second best which were Cherokee. Certified Clintons were third. Many farmers spoke to us early, to be sure of getting some more of this seed for next year. Very few dealers are set up to process Oats as we do our Golden Beauty brand. Those who have seen it grow figure they are money ahead by feeding their own crops and using this specially graded seed.

CHARACTERISTICS OF CLINTON

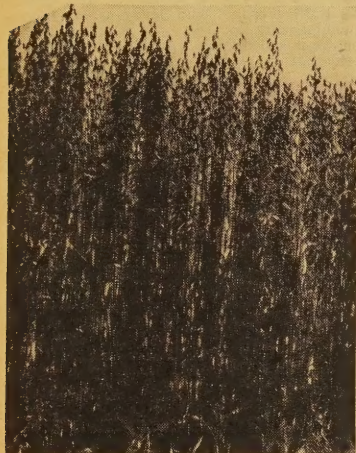

A number of different Hybrids have been developed in the past few years. For a consistent performance over the largest territory, we consider the Clintons still in the first rank. Produced up to 123.8 bu. per acre. Fine, meaty, thin hulled grains. Strong straw that stands up even after grain is dead ripe. Widely adapted to different soils and growing conditions. Highly disease resistant. Resist smut, most traces of rust and perhaps most important of all, resistant to blight. That is what has caused such tremendous damage to many of the older varieties in the past few years. You can't afford to take chances. The extra profit in these Oats is a big thing.

MORE BUSHEL PER ACRE GUARANTEED

In preparing our Golden Beauty brand of Clinton Oats all of the small weak immature kernels are eliminated. You get the strongest largest grain. They are the kind that make vigorous big healthy plants. It is true that a pound of this extra stock does not contain as many grains as the small seeded kind. Therefore you should sow at a fairly good rate of around 2½ bu. per acre. We have seen what these Oats can do, and back up our belief in their superiority with this guarantee. "Sow Berry's Golden Beauty Brand Clintons next to any other Clintons. Keep a record of yields at harvest time. If our Golden Beauty do not outyield the other, we will refund you the difference between what you paid us for our Oats and the cost of our ordinary non certified Clintons." Therefore this brand will cost you no more than our ordinary Clintons unless they yield more per acre. You take no chance whatsoever on your extra investment. You have every assurance of getting much larger profit.

GOOD GERMINATING SEED SCARCE

A lot of the Oats that were harvested last summer are not too strong in germination. Don't take any chance on sowing seed that does not test high and strong in germination. Our seed oats are largely of our own contract growing. Every lot gets a very accurate test, so we know they will grow well. The extra money that you spend for better seed, will come back to you several times over in the way of increased yields. Compared to some seed that will be sown this spring, it will mean the difference between success and failure. It will pay you to demand Berry's Golden Beauty brand. See Item No. 174 on Price List. This seed is GRO-COATED.

OTHER CERTIFIED CLINTON SELECTIONS

CERTIFIED CLINTON RE-SELECT

The Clinton Re-Select Oats is a variety or strain that has been selected from the original Clinton production because it showed improvement over the old. It is recognized as a distinctly different variety and is certified under this new name, Clinton Re-Select. Other States also have made such selections and called them by different names, such as Clinton 11 and Clinton 59 which are also described on this page. They are very similar to the Clinton Re-Select, but in our opinion the Iowa Re-select is the best of the three.

OUTSTANDING ADVANTAGES

This variety ripens more evenly than the ordinary Clintons. It has straw that stands up even after the grain is dead ripe. The grain has thin hulls giving higher feeding value. This variety is adapted to Illinois, Ohio, Indiana, Minnesota and to all of the spring oat areas.

STATE CERTIFIED SEED

Our Iowa-Re-select are all State certified seed. But please keep this in mind that Berry's certified seed is superior in grade to regular certified seed on the market. To meet certification standards, seed must have high varietal purity, free of noxious weed seeds and of good strong germination. See Item No. 177 on Our Price List. The seed is GRO-COATED.

NON CERTIFIED CLINTON

We also have extra fine, heavy graded GRO-COATED Non Certified Clinton Oats at very attractive prices. See Item 178 on Price List.

Dear Sir:

I can truthfully say that I don't believe I could possibly get better service or seed anywhere else. I would recommend Berry seed to anyone.

Very truly yours,

Clarence W. Graham

Devon, Kans.

CERTIFIED CLINTON 59

Different States have been working on the Clinton Oats to make some refinement especially in the way of more even maturity. They have endeavored to produce a better Oat plant selection, rather than through the special grading such as we use in our Golden Beauty brand of Clintons described at the top of the page. There is no question that this selection has brought with it improvement. The Clinton 59 is a selection that was made by the State of Indiana. The Clinton Re-Select described to the left was developed by the State of Iowa. The stock which we have is genuine certified Clinton 59 and is top quality, heavily graded, blue tag seed. See Item No. 175 on Price List.

CERTIFIED CLINTON 11, SELECTION 25

This is a selection out of a Re-selection and represents perhaps the greatest refinement in the variety. In Illinois where this work was done this variety has a tremendous popularity. It is so widely adapted that we can recommend it as a splendid selection for the spring oat section wherever Clintons are grown. We are indeed fortunate to have such a fine supply of State Certified seed this year, when good seed oats are really scarce. See item No. 176 on price list.

Dear Sir:

I have bought all my grass from Berry's for the past 10 or 12 years. Have always been well satisfied. There is no question about saving money. I always receive my seed in due time, and in perfect shape.

Very truly yours,

Henry W. Engelen

Carroll, Ia.

Improved Quality-Heavier Grains-Bigger Yields

GRO-COATED BRAND SEED OATS

INCREASES RESULTS

The sensational performance of Gro-Coated seed has been clearly established. Its value has been demonstrated on tens of thousands of farms. Seed oats, however, required a different formula than that used for Clover and grasses and corn. They have not been Gro-Coated before. Last year we developed a special Gro-Coat formula that also gives splendid results on oats. It gives a high measure of control on the fungi that may interfere with the germination of the oat and in the formation of the plant. It also helps to control some of the diseases to which the plant may later be subjected.

We therefore feel that again this year our value in seed oats is greater than ever. Our seed stock is prepared by giving it a very heavy grading and putting it through several processes that make a product which is truly the very best that money can buy. Berry's Gro-Coated Brand seed oats are far superior to the average seed oats offered for sale. In addition to this extra high quality, we give you this Gro-Coat protection, so that you get a combination of values that very definitely gives you greater assurance of satisfactory returns.

JAMES HULLESS OATS

This is the newest variety of Hulless Oats. It comes from South Dakota. It was obtained by crossing different varieties in order to get into one Oat the most desirable characteristics of other hulless oats. The Hulless Oat, you know, is all meat and it is higher in feeding value than other oats for that reason.

The James Hulless is a medium early, stiff strawed hulless oat. It has about the same maturity as the Clinton. It has resistance to lodging, leaf rust, stem rust and is highly resistant to blight. It may be susceptible to a few races of rust like Clinton, but is the most disease resistant hulless oat.

Over a four year test in South Dakota, it showed an average test weight of 45 lbs. per bushel. In comparing yield, allowances have to be made for hulls. When adjustment was made for hulls, the yield of James over this four year period at Brookings, South Dakota, was 82 bushel per acre, compared to 75.4 for Clinton. At Highmore, it was 74.8 for James and 64.4 for Clinton. You will occasionally find a hulled oat in with these hulless oats. The heavy yields that are obtained from this variety more than compensate for this. It is one of the very finest of hulless oats that has ever been developed. Figure on sowing around 50 lbs. per acre. See Item 179 on price list.

CHEROKEE ★ ANDREW

The High Quality Early Oat Has Resistance to Race 45 Crown Rust

This variety has exceptionally fine grain quality. It produces one of the nicest, plumpest grains of oats that you can buy. This is especially noteworthy for such an early variety. It will mature four to five days to as much as a week earlier than Clinton. The grain is an ivory color with sometimes a pinkish tinge. Because of its earliness it is a great favorite in sections of the south where they want an early maturing oat.

Because of its earliness is perhaps one reason why it shows resistance to the crown rust 45 which comes on a little late. To have an oat that matures before hot weather is in many seasons vitally important. It is our suggestion to our customers that they plant two varieties of oats because the variation in conditions may make a variation in your crop. We will guarantee you as fine a quality of Cherokee oats as you have ever seen. See Item 171 on our price list.

A yellow seeded oat with a fine yield record

This oat was developed by the Minnesota station. Has been grown over a wide area. Illinois, Iowa, Dakotas have all found it to be a very good oat. It is a good yielder. It has a stiff straw. It is slightly taller than the Clinton, and approximately the same maturity. This variety has some tolerance to race 45 crown rust and is resistant to race 7, but susceptible to race 8 of stem rust. This variety heads out quite early but the grain ripens somewhat more slowly than some other varieties.

This is especially a good selection on soil that is normal or below normal fertility because it puts out a taller straw. The grains are plump and yellow. They have a good weight per bushel and a low percentage of hulls. You will find it to be an excellent feeding oat as the blood lines of both the Bond and the Rainbow are excellent. The quality of our seed is tops. See Item 173 on our price list for quotations.

TALLER STRAWED — BONHAM — BIG PLUMP GRAIN

This variety is also a Bond Cross like the Cherokee and the grain resembles it very much. The straw however is taller and that is advantageous especially on thinner soils. The original cross was made in Iowa but this strain was named and distributed by the Michigan experiment station.

This variety has been sold in a good many areas at very fancy prices. The farmers probably were satisfied because it is a splendid oat. However it is not new and can be bought at around the same basis as other similar varieties.

Bonhams have about the same maturity as Cherokee. It is almost identical to it in disease resistance and the yields are about alike. The heavy meaty grains also look like them. The straw height is 2 to 3 inches taller. It is a variety that has a wide appeal.

We have grown these oats ourselves and have supervised them from planting time until they got the Gro-Coat protection and put in bags for shipment to you. The quality is superb — See Item 166 on our price list.

Twenty Years of Satisfactory Dealings
Eaton, Ohio

Dear Sirs:

I have bought Berry Seeds for almost 20 years and have been more than satisfied. You have fine values and they are always at reasonable prices.

Sincerely yours,

Myron S. Burch.

Finds Seed Exactly as Advertised

Fulton, Ill.

Dear Sirs:

I have used your seed for a number of years and have always found it very satisfactory. We have always been able to depend on the seed being exactly as you have advertised it.

Very truly yours,

Robert W. Lockhart.

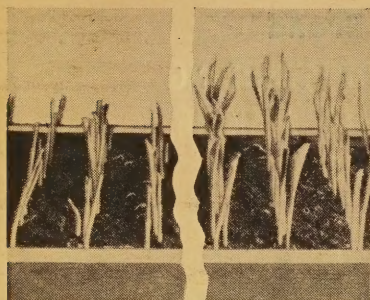

EVERY KERNEL OF BERRY CORN IS-

The Best Blood Lines

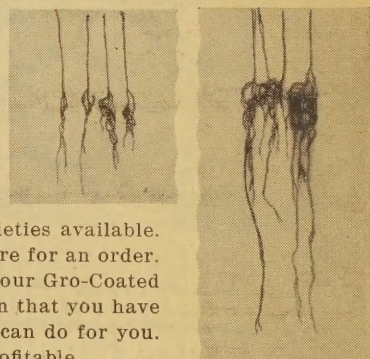

GRO-COATED[®] BRAND SEED CORN

Carefully Protected

This shows the difference between the same variety of corn planted in the same soil on the same day in the same plot. The Gro-Coated Brand side came up quicker and grew faster.

The real secret of our corn is the blood lines or the germ plasm that is used. It is by getting the right combination of the best blood lines that the maximum results can be obtained. Upon this depends the strength of the stalk, the depth of the root, the size of the ear, the depth of the grains, the feeding value, resistance to disease and to insects including corn borers. We strive in our work to obtain for our customers the very best combination. You read about many varieties of corn and there are many varieties available. We cannot sit down and talk with you and put on the pressure for an order. We do ask that for your own benefit that you plant some of our Gro-Coated Brand Hybrids in the different numbers next to the best corn that you have found so far. Let them prove on your own farm what they can do for you. We are certain you will find them highly satisfactory and profitable.

Protected Against Unfavorable Weather

There is no way of telling when you plant your corn as to what kind of weather you may get after planting. It may turn wet and cold. Under such conditions disease organisms that tend to rot the seed become active. Seed Corn may have perfect germination and yet fail to come if these disease organisms destroy it. Berry's Gro-Coat protection gives you the very best of assurance that your seed is protected against these organisms, therefore it will stand much more unfavorable weather. In this way these high quality blood lines that you plant have the best possible assurance of making strong, vigorous, healthy, rapid-growing plants. It is the same protection that is given to all of our grass and clover seeds and the results have been sensational.

Farmers Report Quicker Germination, Faster Growth

Berry's Gro-Coat protection is more than a chemical coating. We incorporate into this treatment a root growth stimulator. This is designed to make a larger root growth, which in turn assures a more vigorous plant. A plant that gets off to a fast start is generally the most profitable plant, the same as a young pig or any other animal. Note the picture above. That was taken from two stalks of corn of the same size and variety. They were planted in the same soil, under identical conditions at the same time. Note that the larger roots coming from the Gro-Coated Brand plant were over twice as long and over three times as heavy. It had brace roots well formed and the secondary root system was well developed while on the other there were no brace roots and only the primary roots were there, the secondary roots just barely started. This has been another evidence of the care taken by Berry's in the preparation of seed corn to give you better results in your fields.

Our Guarantee of Better Stands
applies to Corn also—See pages 2 & 3

CORN

FOR *Top Yields*

ON *Different* SOILS

All Our Corn Is "GRO-COATED"

BERRY'S 800

A Top Quality Hybrid

One of the best in 120 day class

This great hybrid can be grown wherever U. S. 13 is adapted. It is a little earlier than that well known variety which makes it adapted to even a little wider area. It also holds its ears better, and that is becoming a more important factor in mechanical picking and corn borer damage. It gives you those "extra" quality features that are essential to a top grade hybrid.

This corn has a very, high shelling percentage. It is a very fine feeding corn, too. It is one of those varieties that is always surprising in the way of the pounds of shelled corn. That's what counts most. For a good rugged corn that will go into your fields and do a job year in and year out, you will find Berry's 800 a splendid selection.

Gro-Coated Brand—Flat \$9.90 bu., Round \$7.00. 15c a bu. higher in Illinois or Ohio.

US 13

One of the older hybrids and a splendid one. It is a deep grain, has a fine feeding value, and easy to pick. There are many growers who produce U.S. 13 corn, but the yielding ability of the seed from these different growers can vary widely. We offer you U.S. 13 at its best. Yields are often increased 15 bu. per acre.

Gro-Coated Brand—Flat \$7.75 bu., Round \$4.95.

The Hybrid grown with Extra Inbreds

BERRY'S 813

Has recorded yields of 159.1 bu. per acre

Sensational yields have been obtained with this variety without fertilizer or extra heavy planting. This means it has to produce plenty of big heavy ears that are well filled. In producing this corn we use the regular 800 formula, described in the opposite column and add a certain percentage of another variety in the male line when we are producing the seed. This contains a later pollinator so that we are lengthening the pollinating period. This is an extra insurance feature that is a vital factor in years when hot weather burns pollen in the regular line. Customers tell us this 813 seems to have extra hybrid vigor. It is a single ear, deep grained, strong stalked hybrid. It has shown excellent resistance to chinch bugs and also a tolerance to corn borer. It is a 120 day type. We urge you to try it in connection with your other hybrids. It is something quite different because of this extra line.

Gro-Coated Brand—Flat \$9.90 bu., Round \$7.00. 15c a bu. higher in Illinois or Ohio.

You've Never Grown a Hybrid Like...

Berry's NEW "25" SERIES

Gro-Coated Brand

**COMBINING ALL THE OUTSTANDING
FEATURES THAT GO INTO MAKING
A FINE HYBRID**

Prices all varieties on this page same from all shipping points.

The miracle of progress towards better hybrids never stops in the Berry organization. There is a constant search for improvement. The old time tested varieties are compared with the new. The old can be improved by making slight changes. New ones with different blood lines are thoroughly tested. They must show improvement under a variety of conditions to be accepted and incorporated into our line of hybrids.

THE 25 SERIES ARE AN ADVANCEMENT

It's been five years ago when we first produced these in a limited way. They have proven themselves to be distinctly superior. We have tried many others and could offer you many more varieties but none to equal these. We urge you to grow some of these, side by side, with the best you have found so far. We are confident you will find superiority in these truly great Hybrids.

"825A"

115-120 Day Type

When we brought out the original 825 we thought we had about the best that could be obtained. It was a variety that produced a heavy crop on a strong, sturdy stalk. But we are always aiming for greater perfection and 825A is one that has several refinements over 825. The head of our corn breeding program considers this the best in its maturity class that he has ever developed.

We have many varieties that we do not even offer to our customers. They are good, but in this catalog we sell only the best. This 825A has many refinements. The grain is the finest we have ever seen. Ears hang on well and husks cover the tips well. Good for machine or hand picking. The shank is strong so it resists borer damage. It is adapted to a wide range of soils. Does not have to have rich soil. Farmers who have grown it tell of the great interest that their neighbors have in it. That's a splendid recommendation, to be outstanding among many good varieties. You won't go wrong in picking 825A.

Gro-Coated Hybrid 825A, Flat \$9.75 bu., Round \$7.00.

"625"

A 110 Day Variety

This corn is five days earlier than the 825 but it is still a top yielding hybrid corn, even in the 120 day area. This variety can be grown from southern to north central Iowa across the nation, wherever similar conditions prevail. To the south of us like Missouri and other states farmers who want corn for early maturity or later planting will like 625. This variety has been giving good results all the years we have had it and this year it has been really sensational. Berry's 625 has stood up under wind conditions that have practically levelled neighboring fields. It held its ears when there was a lot of droppage in the other varieties. It will stand a lot of dry weather. The grains have a good depth, the shelling percentage is high. In its maturity class we consider it the very best. Try some of it.

Gro-Coated Brand—Flat Grade \$10.50 bu., Round Grade \$7.50.

"425"

A 90 to 95 Day Type

This is our earliest variety of corn. It is adapted to northern Iowa, southern Minnesota, Wisconsin, eastern South Dakota and northern Illinois, and areas having similar conditions. It makes a wonderful main crop variety in this area. Further south it has been highly popular where early feeding corn is wanted or when conditions required late planting. The plants are strong and sturdy. It has a broad leaf and makes a vigorous growth. In dry seasons it has

always produced more than anticipated. It has been excellent every year we have grown it. The strong ear shank prevents ear droppage. This is helpful when you have high winds or very dry corn. Enthusiastic reports come in even from southern states like Missouri, Kansas and Oklahoma. Be sure to try some of it if you need a corn of this maturity type. It is truly a great Hybrid.

Gro-Coated Brand—Flat Grade \$11.25 bu., Round \$8.25.

"525"

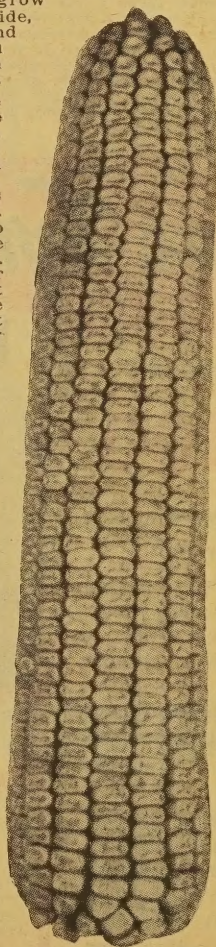

100-105 Day Type

This variety has outperformed any other Hybrid in its maturity class that we know about. In Illinois last year, it outyielded full season 115-120 day types by a considerable margin. That is truly unusual. It has very deep grains and a small cob. It is tolerant to corn borers and root worm. In our experience, has shown practically no lodging or ear droppage.

This is the first year we have sold this commercially. We believe it will become one of our most popular varieties. We consider it a great corn for areas having conditions similar to eastern Nebraska, Central Iowa and all the way through Illinois, Indiana, Ohio to the coast. Even south of this section its earlier maturity and big yields will have a great appeal to many farmers.

Flat Grade \$10.75 bu.,
Round \$8.00.

**"Gro-Coated"
Brand Seed
Gives Greater
Insurance of
Better Yields**

Dear Sir:

We have been using Berry's Seed on our farm exclusively and find no other seed like it. Your 813 is doing exceptionally well in spite of bad weather. Sincerely, Mitchell A. Dupoux.

Westville, Ill.

Gentlemen:

I find your seed exactly as represented and at a savings which means a lot at seed buying time. Your No. 813 Hybrid Corn was the best I ever raised.

Tulsa, Okla.

Yours very truly, Winston E. Fellers.

BERRY'S SEED CORN GIVES BEST ASSURANCE OF EXTRA PROFITS

BERRY'S 405

**A Beautiful Big Yields
For Richer Soils
95-105**

A heavy producing, early maturing hybrid, 95 to 105 day type. This comes next to our 425 for early maturity. It is a very remarkable variety, in that it has given such wonderful results over such a wide area all the way from Northern Iowa down into Oklahoma. We have had splendid reports on this Corn. For Northern Iowa it is a main crop, for the South, of course, for late planting or for early feeding Corn.

405 makes a nice leafy growth, has kernels of good depth and ear size very satisfactory for a Corn of this maturity. Its big feature is its big yield, that's where the extra profit bushels come in. It grows vigorously in the spring, and that's a big advantage. This 405 has outyielded later maturing varieties by quite a big margin. It does well on a wide range of soil. We consider this second to none in its maturity class. Of course, it is Gro-Coated Brand, which gives you extra protection when you have unfavorable weather after the Corn is planted. If this is the maturity range that you want, be sure and try the 405.

We would like to see you grow some of this corn. In comparison with any other Hybrid of similar maturity its performance in the field will prove its value.

BERRY'S HYBRID BLENDS

Many of the most enthusiastic reports we get on our seed corn comes from farmers who have planted one of our blends. This is especially true in a year when the weather is very hot while corn is pollinating. That is when most of the pollen dies before it falls on the silk. Dead pollen can't produce a kernel of corn.

In most hybrid varieties the pollinating period is relatively short. There are only 4 pure lines in most of them and they may all pollinate at about the same time. By blending 3 or more Hybrids together we can prolong the pollinating period. Therefore even if you should ex-

(See left hand column below)

BERRY'S 615-B

**A Big 105 to 110 Day Corn
Adapted to Thin and Rich Soils**

This is a splendid, heavy yielding Hybrid for one so early in maturity. It is earlier than 625 and just a little later than 405. It is more widely adapted than any other variety in this class. Early maturity adapts it to a wide range of climates. Farmers in northern and north central Iowa, and from Nebraska on east to Illinois, Indiana, Ohio, Pennsylvania, West Virginia, etc., will find this an excellent main crop variety. Farmers to the south of this area consider it one of the finest corns they can plant to get some early feeding corn, or where necessity compels late planting. Also in some areas its early maturity helps it escape hot, dry weather. We had one field near Clarinda that made dry corn of a yield of 110 bushel to the acre. It is somewhat similar to 939 but it makes a larger, better formed ear, holds its ears better and has superior husking qualities, as well as stronger stalks. For an all around purpose corn you will find this hard to equal. The 625 is superior in some respects, but also is just a little later. The ability of our 615 to grow under so many different conditions of soils and climate make it a dependable variety on which most any farmer can thoroughly rely.

Berry Blend description—continued

perience hot weather during part of this time, it is seldom that it would continue for many days. Hence by planting a blend you have greater assurance of well filled ears and bigger yields.

What Makes Berry's Blends

We use only the regular varieties that we produce ourselves. There are two maturity ranges. **Medium and Late.** In the **Medium** we use varieties that range in maturity from 95 to 110 days. In the **Late** those that mature in 105 to 120 days. Then in each there is a 15 day spread to give a good pollinating period and still adapted to being grown together.

The Grades In Which Blends Are Available

We offer Blends in the four grades as described below. The **Regular Flat** which is available only in the **Late Blend** and the **Small Flat, Thick Flat and Round** which are available in both **Medium and Late Blends.**

Regular Flat

This is regular grade of flat corn suitable for planting with plates that generally come with most makes of corn planters. It is accurately graded for uniform planting. There may be an occasional off-color kernel, but the germination will run 90% or better. You can buy this at a deep cut price as set forth in prices shown below. It is a splendid Value. Comes in the **Late Blend** only.

High Quality Good Germinating Seed

Dear Sir:
I have bought Berry's Seeds for several years, and find them to be of high quality and good germination. They have been very satisfactory.

Altoona, Kan.

Sincerely, Alfred Erbe,

**Small
Flat
\$6.25
BU.**

Grades of Blends—continued

Small Flat

Graded for accurate planting but consists of shorter kernels. You can plant more acres from a bushel. In our seed fields we very often use this size grain and get yields of 100 bushels per acre and more. Available in **Medium or Late Blend.**

Thick Flat

This is composed of kernels that are too long to be classified as rounds and too thick to make regular flats. These kernels seem to produce very strong vigorous plants. This grade is one of our best sellers and at our very low price is an exceptional value. There is nothing better from the standpoint of production available in **Medium and Late.**

Round

These as the name indicates are kernels that approach a round shape. They are graded for accurate planting and by using plates for round corn, good uniformity of planting is obtained.

Prices On Berry Blend

	MEDIUM	LATE
Regular Flat	(not available)	\$7.50 Bu.
Small Flat	\$6.50 Bu.	\$6.25 Bu.
Thick Flat	\$5.75 Bu.	\$5.50 Bu.

Splendid Yields—Well Satisfied

Dear Sir:
I am writing just a few lines to let you know how satisfied I was with your seed. I had a splendid yield this year.

Harrod, Ohio.

Yours truly, Vernon S. Eley.

SPRING GRAINS that are Popular MONEY MAKERS

Spring BARLEY

KINDRED or L BARLEY

This variety of Barley is apparently about the best of the malting type Barleys. It is adapted over a wide area and receives a very fine endorsement from many sources. The Mid-West Barley Improvement Association has especially requested us to cooperate in selling this Kindred Barley. It is the No. 1 choice of the majority of maltsters and brewers. Illinois, Iowa, Minnesota, Wisconsin, North and South Dakota all recommend it. Kindred is a mid-season maturity. It has rough awns. It has very good resistance to stem rust. The variety seems to have given very satisfactory results under quite a variety of conditions. It brings, as a rule, the very best prices of all malting Barley on the market. The straw is not as strong as in some other varieties but that seems to be its only weakness and this is far overmatched by its other fine characteristics. It is a variety that receives most general recommendation from the greatest number of people. Therefore, we would consider this a splendid selection. We have some very nice quality seed for you. See Item 191 on our price list.

MOORE

This is a high-yielding, stiff-strawed and disease-resistant variety of Barley. It is of hybrid origin. It is a wide, six-rowed, smooth-awned spring Barley. It has relatively thin hulls. The awns are rough at the top but break off very easy during thrashing or combining. The straw of Moore is thicker and stands up better than the average variety. The five-year test at Madison, Wisconsin, shows that it has outyielded the Wisconsin barless by 6%, Oderbrucker by 12% and other tests show it is 39% over Oderbrucker, 28% over Kindred. It yielded 57.2 bushels in Wisconsin test.

This Barley is no longer recommended for malting purposes but it still is a good feeding barley to grow in many areas. Under certain conditions the grain of this variety is a dull gray color and brewers and maltsters do not like this so well, therefore it may not bring the best price for a malting variety but it still is a good feed grain because it has a stiff straw, potentially a very high yield under favorable conditions. Has resistance to stem rust, spot blotch, root rot and mildew. See Item 192 on price list for quotations.

MONTCALM

disease than most of the older varieties. It is this disease resistance in yields that are obtained. Montcalm is an accepted malting variety of Barley. This Barley seems adapted over a wide area, even in Central and Southern Iowa it outyielded many other top varieties. It also showed a two-pound heavier test weight per bushel. That in itself indicated the great value placed upon it by farmers who saw it growing. It is just as fine today. In these days of lower prices, increased production per acre is the only way to get more profits. It takes better seed to help you get these greater yields. Our heavy reclaimed Montcalm Barley will help you get that job done. You will find such seed a wise and sound investment at our present low prices. SEE ITEM 190 ON LIST FOR QUOTATIONS.

This is also one of the newer Barleys. It is a six-row, smooth-awned, spring Barley. The straw grows erect, it is fairly tall, the grain is of medium maturity. It ripens about two days ahead of the Wisconsin 38 and has about the same length straw. It has greater resistance to disease in these new varieties that apparently is responsible for the increase in yields. It also showed a two-pound heavier test weight per bushel. That in itself indicated the great value placed upon it by farmers who saw it growing. It is just as fine today. In these days of lower prices, increased production per acre is the only way to get more profits. It takes better seed to help you get these greater yields. Our heavy reclaimed Montcalm Barley will help you get that job done. You will find such seed a wise and sound investment at our present low prices. SEE ITEM 190 ON LIST FOR QUOTATIONS.

SPELTZ

PRACTICALLY RUST AND SMUT PROOF

This picture shows what this remarkable grain looks like. It is really a type of wheat. It is very nutritious. The shucks cling to the two grains each carries. Grain is a little softer than most wheat. Makes wonderful ground feed. It yields well and is a very profitable crop under dry conditions. The grain is highly resistant against most races of rust and practically immune to smut.

Speltz is one of the oldest grains known to mankind. Apparently it was grown in prehistoric times. German-Russian immigrants introduced it into the United States. The Speltz we have is for spring seeding. It is grown from Canada to Texas. Iowa, Minnesota, Wisconsin, Michigan and states to the east are growing it as well as Western states where drought conditions are most apt to prevail.

Speltz is valuable as a nurse crop as it has very strong straw. It matures early. Sow 2½ bu. per acre as early in the spring as possible. Cut before dead ripe. Thresh about like Oats. See Item No. 202 on our Pink Price List.

A Great Drought Resister

"GRO-COATED" FARM SEEDS PRODUCE BETTER CROPS

For Best Results, Plant Only "GRO-COATED" Brand Seed

Good Seeds and Nursery Stock

Canon City, Colo.

Gentlemen:

I wish to state that Berry's Seeds are very good, not to mention your prompt shipping service. Also, your nursery stock is the best I ever used.

Very truly yours, Frank Dilley.

Two Generations Endorse Berry Seeds

Dear Sir:

Amoret, Mo.

I have planted Berry's Seeds for several years, and I have always been very pleased with the results. My father used your seeds when he was farming, and I know from experience that they are good.

Your customer, Walter K. Ewbank.

LEE

The SPRING WHEAT

WE RECOMMEND ABOVE ALL OTHERS
FOR YIELD AND QUALITY

A Variety in Big Demand First Time at Reasonable Prices Finest Quality Northern Seed

We are always looking, checking, testing new varieties of Grains as well as grasses and legumes. This research is being done for you. Berry customers have learned to depend on this book for guidance in their farming operations. We have checked on many varieties. Some that we sold in the past have been discarded for those that were better. This Lee Spring Wheat is our selection as the best for milling wheat for the majority of our customers. Reports we have rank it materially better than others in all around performance. Excellent milling qualities and big yield.

The Iowa station reports Lee as being most resistant of spring varieties to leaf rust and states it is a high yielding variety that stands up well. The big demand there has been for Lee Wheat which proves that the variety is selling itself. Farmers have seen and heard about it and want it. It should please you too. That always happens when it proves itself superior. It is during this period of early development that growers can often sell their crops at premium prices for seed purposes.

A Top Quality Variety and Big Yielder

Lee is a high quality Wheat. It has excellent milling qualities. It has consistently, in several comparative tests, outyielded Mida by 3 to 5 bushels per acre.

Lee is a medium, early maturing bearded variety which in some years is another decided advantage. It classifies as a hard red spring wheat. We have contracted for a good supply of seed. Thus we can assure you of getting the genuine article and in the best quality. Heavy weight, thoroughly clean high germination.

We are sometimes asked where spring wheat can be grown. That will vary according to season and how early you can get it in the ground. We have grown good yields of spring wheat in southern Iowa in years when it did not get too hot too early. Normally this is a little too far south for spring wheat, but from Central Iowa on north it should do O.K. especially if Northern grown seed is used and early seedings are made.

Our seed is Northern grown and will be shipped direct from Fargo No. Dakota or similar point. See Item No. 198 on Price List for quotations.

WINTER RYE

FOR EXTRA
EARLY SPRING
PASTURE

Every spring we get many calls for a crop to sow for early hay or pasture. This year the demand will undoubtedly be heavier than it has been for many a year. The drought of last fall has created serious feed problems on countless thousands of farms. There are crops like Sudan that will help, but they can't be sown until the ground is thoroughly warm. What is needed is something that can be sown early. You need a crop that will withstand frost yet grow fast. You want a heavy producer and good feeding value.

There isn't a crop, in our opinion, that will do this job like Winter Rye. Don't use spring Rye, it won't stool freely. Ordinary Winter Rye may taint the flavor of the milk if you pasture cows on it. The Balbo Rye does not do this and, therefore, that is the kind to sow. You can put it in just as early as you can get a seedbed prepared. Sow $1\frac{1}{2}$ to 2 bushels per acre.

You can begin using it when about 8 inches high. Some like to divide pasture and pasture part while other is making a new growth. As a rule, you can keep right on pasturing until mid summer. Then you can have Sudan ready if you still need more temporary pasture.

Rye can be used for hay if cut before maturity. Winter Rye sown in spring seldom makes a grain crop. It is good to plow under for green manure.

This Balbo Rye has become very scarce as practically all available seed went in the ground last fall. We, however, anticipated the great need for it this spring. It probably won't be enough, so please order early. See Item 200 on price list.

HENRY SPRING WHEAT

This is one of the heaviest yielding varieties of spring wheat. The grain does not make as good a quality of flour as Lee Wheat but makes wonderful feed. A good many farmers want a wheat for this purpose. If big yields and high feeding quality, you should consider Henry Spring Wheat.

The grain is bearded and is medium late in maturity. Has tall medium stiff straw. Variety is moderately resistant to stem rust, leaf rust, smut and black chaff. The variety was originated in Wisconsin, but is now being grown over a wide area in adjoining states and others having similar climatic conditions.

We believe there is a definite need for this type of wheat in a large part of our customer trade area. Therefore, we are very glad to be in position to sell you this variety this year. Our seed is of splendid quality. Shipment is guaranteed to please you in every way—See Item 199 on price list.

FIELD PEAS

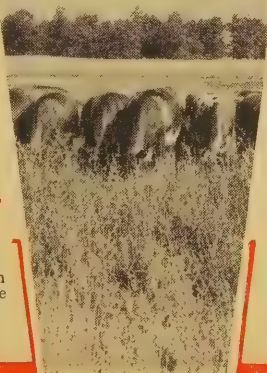

This Crop should not be confused with Cowpeas. They are a warm weather crop and planted mostly in southern states. Our Field Peas are true peas. They are sometimes referred to as Canada Field Peas. They can and should be sown as early in the spring as possible. They like a cool growing season. If you need an early hay crop that is high in protein, sow a bushel of these peas with 2 bu. of Oats per acre. Peas are vine-like. The oats help hold them erect. Cut the crop for hay when Oats are in the dough stage. The production is heavy. The feed is fattening. Also good to cut and feed green. It is also a good crop to plow under for green manure. Inoculate your seed. See Item 189 on Price List. Seed supplies limited.

Always Boosts for Berry Seeds

Dear Sir: Moorehead, Ia.
For the past 25 years I have purchased all my field seed from you. I have always been perfectly satisfied. Your seeds are all anyone could ask for. That means perfect quality. I'll always boost for Berry's Seeds, both field and garden.
A satisfied customer, Lewis W. Shepard.

Blue Ribbon from Berry's Seeds

Dear Sirs: Clear Lake, Wisc.
I got a blue ribbon at our fair on the Clinton Oats I got from you. They sure are swell and the best Oats I ever raised.
Yours truly,
Ole P. Korsbon.

SWEET SUDAN GRASS

DELICIOUS, NUTRITIOUS AND ENORMOUSLY PRODUCTIVE

Gro-Coated Brand Helps Insure Best Results

Since Sweet Sudan Grass has come on the market it has gained very rapidly in public favor. In making Sweet Sudan the Common or Regular was crossed with Leoti which is a heavy yielding sweet, juicy sorghum. This crop had high resistance against disease and also shattering of seed. Sudan was finer stemmed and stools more freely. It makes wonderful hay but is not sweet. In making the cross the best of these two crops was put into one. It grows very much like ordinary Sudan. It stools even more freely and grows taller. The leaves are a little broader. It is a sensational yielder, and in reports that we have it has outyielded the Regular or Common Sudan by 30%.

GRO-COATED Brand Sudan Grass is guaranteed to produce better stands. See Page 2

Item No. 231

A Very Palatable Fast Growing Crop for Pasture and Hay

You Plant this after the seed bed is warm as described below under How to Handle Sudan Grass. You can get two or three cuttings of hay in a year. It remains palatable over a long time and you do not have to cut it at any certain stage. Even if you let it stand for seed it makes good feed. It has a delicious flavor and because of its sweeter content, a higher feeding value. Notice the photograph at immediate left. The cow eats the Sweet Sudan down to the ground while it nibbles the tops of the Regular. Sweet Sudan is a little later in maturity than Regular Sudan. It maintains its high feeding value in pasture up until frost. It is a great heat and drouth resister. It gives you sweet, palatable juicy food when many grasses are becoming dormant because of heat. Pasture it after it gets around 10" high.

Seed Supplies Short—Demand Heavy

There will be a big need for Sudan Grass in areas that have been hit by drought. Big, heavy hay and pasture will be needed quick. We predict a tremendous demand for Sudan Grass seed. This will come in face of a short seed crop. Prices will probably advance sharply by seeding time. Order your seed early this year.

Small lots postpaid: 1 lb. 50c; 5 lbs. \$1.75; 10 lbs. \$3.00. See item 231 on price list.

Best Crop I ever Raised

I have the best crop I ever raised of Alfalfa. Clipped the crop after oat harvest. The 1st of September, it was knee high again. Used 3 pounds less seed per acre. I will insist on Gro-Coated seed.

A. Nevenschwander, Grabill, Ind.

Likes Gro-Coated Seed

I will want Gro-Coated Brand seeds in the future. They gave better stands and more vigorously growing plants. I will gladly pay the extra cost to get my Gro-Coated Brand.

J. S. Jarboe, Pratt, Iowa

100% Better Stand

I sowed Gro-Coated seed last year. It was the best seeding I had in my life. It is twice as thick as it needed to be, and was 2 feet high when I cut the wheat. It made 100% better stand. I wouldn't sow any more seed unless it was Gro-Coated Brand.

L. McWilliam, Deerfield, Minn.

PIPER SUDAN

FOR QUICK DROUGHT RESISTANT GRASS

A Fast Grower—Adapted to Cooler Climates

Sudan Grass will be in big demand this year because feed supplies in many areas are short and pasture very poor. This Piper Sudan will be widely used because it has some very valuable characteristics. The original Sudan came from the south. Piper Sudan was developed in Wisconsin. There are many farmers who rate it as by far the best variety to grow.

Excellent results have been obtained from this Sudan Grass in Minnesota, Iowa, Nebraska, New York, Pennsylvania, Illinois, and other corn belt states. It has only been on the market a few years in a commercial way and we are glad to have it for you.

Piper Sudan resists foliage diseases better than common Sudan. It stays green longer. Yields of forage and seed have been very heavy. It is lower in prussic acid than other Sudan. It is better adapted to cooler climates. That alone is a very important feature for some sections. The plants have strong seedling vigor. They get off to a quick start. The crop makes good recovery after grazing. It is very satisfactory to livestock as to palatability.

Buy Your Seed Early

Because of drought, seed production has been below normal. This new variety is still scarce. Don't wait until planting time to buy. You may be disappointed. Remember our seed all has Gro-Coat protection. That means you can generally use less seed per acre. See our guarantee on page 2. Better stands or any extra cost refunded. See Item 229 on price list for quotations.

GRO-COATED Brand Seed is most economical to use. See Pages 2 and 3

How to Handle Sudan Grass

Do not sow until corn planting time or after. Prepare a good seed bed like that for Corn. Drill in close rows or broadcast. Cover the seed about an inch deep. Sow 20 to 25 lbs. per acre. Begin pasturing it when it is about 10 inches high. It can be pastured until frost. Many consider it best not to pasture Sudan after frost as there is some danger of prussic acid developing in young dark green growth that may start after periods of extreme drought or after frost. Generally cut for hay when in bloom, but can be cut earlier or later. See item 229 on price list.

Price in small lots Postpaid: 1 lb. 50c; 5 lbs., \$1.85; 10 lbs., \$3.75.

Fine Seed—Money Saving Prices

Gentlemen: Annada, Mo.
I have been using your fine quality seed for a number of years and have found it O.K. at a money saving price.
Yours truly,
Frank Busch

Berry's Seeds Give Best Results

Dear Sir: Goodwins Ferry, Va.
I find that I get better results from Berry's seeds than with any of the other companies I've done business with. They are everything they are recommended to be and more. Very good quality at a reasonable price.
Sincerely, Eugene Doss

SOY BEANS

**MONEY
MAKING
VARIETIES**

HAWKEYE

This is a splendid variety as a main bean crop in areas like north central Iowa, northern Illinois, Indiana, Ohio, southern Michigan. It is also used in Nebraska and southeastern South Dakota. The stalks are strong. The pods are mostly three seeded. It has good length of straw which is lodging resistant. It is perhaps the most widely grown bean throughout Iowa. Farther south it is used for delayed planting where they want the crop off the land early so they could put it into wheat. Yields of over 40 bushels per acre have been recorded in official tests for this variety. We can recommend it to you very highly. See **Items 184 and 185** on our price list for quotations on this variety.

BLACKHAWK

This is our earliest soybean. It is a wonderful bean for areas like northern Iowa, southern Michigan, Minnesota and other similar climatic areas. It has outyielded other well known early varieties by a considerable percentage. It is a Mukden-Richland Cross. In some respects very similar to the Hawkeye but about a week earlier in maturity, two weeks earlier than the Lincoln and Adams. Michigan reports it bears its pods high above the ground for easy combining. Stands up well. High in yield. Seeds are quite large for an early variety. We especially recommend them as a main crop for northern Iowa and for delayed planting or early maturity farther south. They are a splendid bean for such an early one. See **Item Number 183** on our price list.

HAY BEANS

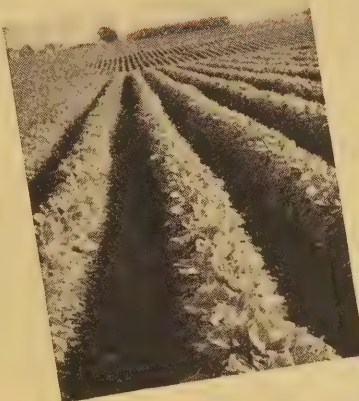

Hay soybeans are finer stemmed than the grain varieties that are described above. These grain varieties are sometimes used for hay. However, if you want it strictly for hay, buy the hay beans. Plant them at the rate of about a bushel and a half to the acre. We generally supply the Kingwa, a black bean, for hay purposes, although other varieties may be used. They will be good and the beans will be of the hay variety. See **Item 188** on the price list.

LINCOLN

This variety is about a week later than the Hawkeye and two weeks later than the Blackhaws. It is generally advisable to grow as late a variety as the season permits because generally a larger yield of beans is obtained. Lincoln is a very high yielding bean. It outyielded the Illini and Dunfield by 20 to 30%. Lincoln has a higher oil content and the quality of the oil is extra good. It and the Adams, described below, run about neck and neck in production. Lincoln has a good straw growth. We recommend this for areas having conditions like the southern two-thirds of Iowa and the northern half of Missouri. Lincoln holds its beans well for combining. Ohio, Indiana, Illinois, Missouri, Virginia, even Wisconsin and Michigan, give excellent reports on the Lincoln Beans. See **Items 181 and 182** on the price list.

ADAMS

This is a very popular variety with a high yield. Good tall straw, perhaps even more lodge resistant than the Lincoln and may mature a few days earlier. In comparison to Lincoln, several tests show it superior in yield and stands up better. It has more oil content and is higher in protein. The Lincoln is still a good soybean and doing a wonderful job, but the Adams shows that it has somewhat superior characteristics. This variety has been tested with the greatest of care and definitely proven itself as a high quality, top yielding soybean. The seed that we have for you in all of these varieties is thoroughly re-cleaned and every shipment guaranteed to satisfy. If you have never grown any of these Adams beans and you are in the area of its adaptation, we do urge you strongly to try some of them. See **Item 180** on the price list.

INOCULATE SOY BEANS

Be sure to inoculate soybeans for best possible yields. Prices for inoculation: 2 bu. size, 40c; 5 bu. size, 60c; 25 bu. size, \$2.70. Carton of six 5 bu. sizes, \$3.25.

HAIRY VETCH

LIVES OVER ONE WINTER

This is also known as Winter Vetch because it is very hardy and will winter over in most any part of the U. S. The crop has as wide a range of use as Red Clover. Makes excellent hay. It furnishes pasture the first season when sown in the spring and makes a full hay crop the next year.

Winter Vetch is an excellent cover crop to use in orchards. It is a wonderful crop to plow under for green manure. The root system is very fibrous and it is a great nitrogen-gathering plant. You add a lot of humus as well as soil-building elements to the land. Winter or Hairy Vetch does especially well on sandy soils and is one of the most profitable crops to grow on such land. It can be grown successfully on any well-drained land. This Vetch is highly drought resistant and also quite resistant to Alkali. It will germinate well on soils too Alkaline for most legumes. You can sow in spring or fall. When fall sown, acts as a winter annual like wheat. Remains green late in the fall, starts early the next spring. Is often sown with winter grain to help support the crop. Sow 20 lbs. per acre. Inoculate your seed. See

Item No. 68 on Price List. Postpaid: 1 lb., 55c; 5 lbs., \$2.00; 10 lbs., \$3.75. Our Gro-Coated Brand Vetch is guaranteed to produce better stands. See pages 2 and 3.

Always Good Seeds for a Long Time

Dear Sirs: Platteville, Wisc.
We have used Berry's Seeds for a long time and have always had good results. We are very satisfied.
Yours very truly,
Ernest Stanton.

VETCH

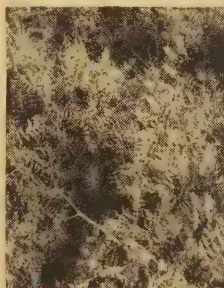

SPRING VETCH

AN ANNUAL VARIETY

This Spring or common Vetch is not as hardy as Winter Vetch and should be sown only in the spring excepting in areas where temperatures do not go below zero. The seeds are much larger and the plant makes a coarser growth than Winter Vetch. Although it does not stand extreme cold it does prefer a cool-growing season. It can be grown as far south as regular field peas can be grown. This does not mean Cowpeas but the true peas. In fact, you can use this crop like Canada Field Peas. A good practice is to sow with oats and cut the two together for hay while the oats are still green.

Sow the crop early in the spring. It will stand pretty cool weather and some freezing, same as peas. Sow 40 to 50 lbs. per acre with a couple of bushel of oats. Vetch grows 3 to 5 feet high. Grows fast and yields are heavy. Makes excellent feed that is high in protein. The crop also may be used as a green manure crop and plowed under while in bloom. Then, you of course, get no crop but you will add a lot of humus and nitrogen to your soil. It is necessary that Vetch seed be inoculated. The cost is reasonable.

See page 31 for information. Package of Inoculation for 100 lbs. of Seed costs only 50c. See **Item No. 69 on Price List.** Postpaid: 1 lb., 45c; 5 lbs., \$1.60; 10 lbs., \$2.95.

Marvelous Mixture—a Great Crop. (See Page 21)

Dear Sir: Amsterdam, Mo.
I bought 6 bu. of your "Marvelous Mixture" and the photo I have enclosed, will show a stand clear up to my armpits. It's a wonderful crop. Your seed has always been very satisfactory.
Yours very truly, A. E. Semsch.

A Heavy Producing Fast Growing Sweet Tasting Crop

ATLAS SORGO

Early Drouth Resistant; Very Palatable and Nutritious

This is one of the most sensational Forage Crops ever developed. It is an enormous producer. Yielded up to 18.7 tons per acre, under conditions where corn yielded only half as much. In dry seasons it has out produced corn in grain yields 3 to 1. Nebraska and other States report it the heaviest forage producer. From Nebraska, through Iowa and on East, down South to the Gulf it is a wonderful fodder crop. The juice of Atlas Sorgo is very sweet. That makes it highly palatable and it is a very nutritious feed. Cattle especially will leave most any kind of feed to get at Atlas Sorgo. They thrive on it. In extreme drouth years we have seen farmers bring their stock through the winter with nothing but Atlas Sorgo fed right out of the shock. It brought them through in excellent condition, fat and sleek in the spring, as though they had been fully corn fed. This crop also makes wonderful ensilage.

Highly Drouth Resistant

The average crop like corn for example, if it is severely injured by drouth will stop growing. Atlas Sorgo on the other hand will start up again. In sections where drouth completely dried up corn, Atlas Sorgo remained green. The crop also seems highly resistant against grasshopper damage. Where one corn field was almost completely wiped out by grasshoppers, Atlas Sorgo was practically untouched. Grows 10 to 12 ft. tall. It has good strong stocks. It is very resistant against lodging. The seeds of Atlas Sorgo are white and very palatable. Plant 8-12 lbs. per acre at corn planting time or after. Rows 40 inches apart. Cut a little before frost. Shock to cure.

All of our Sorghums and Millet seeds are GRO-COATED BRAND. We find that these crops are greatly benefited by this process, especially in years when cold or wet weather follows planting. See Item 220 on Price List for quotations. Postpaid, 1 lb., 45c; 5 lbs., \$1.75; 10 lbs., \$3.00.

ALL ITEMS LISTED ON THIS PAGE CAN BE USED FOR EMERGENCY SILAGE OR HAY CROPS.

Picture shows grain production of Atlas Sorgo. Makes wonderful feed stalks and all fed right from the shock.

NORKAN or Sometimes Referred to As Early Atlas

This crop very closely resembles Atlas Sorgo in the way it grows and in the type of grain it produces. It is, however, quite a bit earlier in maturity (about 10 days to 2 weeks earlier). That means, of course, it can be successfully grown much farther north than Atlas. In areas south of Central Iowa the Atlas would produce more tonnage as it makes a taller growth. However, areas having shorter seasons or for planting later in the season this Norkan is a good selection. While it will not make as tall a growth, the grain yields generally equals Atlas.

This crop is a cross of Atlas Sorgo with Early Sumac Cane. It is sweet stalked and very palatable as a fodder crop. Plant like Atlas. (See also NORGHUM on next page.)

We have some beautiful seed for you. See Item 221 on Price List. Small Lots, Postpaid, 1 lb., 40c; 5 lbs., \$1.50; 10 lbs., \$2.75.

MILLETS

Be sure to drop us a card if you mislay our Pink Price List.

German or Golden

This is that beautiful, heavy growing variety that makes such wonderful production. Its leafy growth may attain a height up to 4 and 5 ft. Yields as high as 4 tons per acre are reported and seed yields 25 to 40 bu. The feeding value of the hay is similar to that of other grass crops.

Millet seed should not be sown until after corn planting time. It wants warm soil and weather. Does not like cool weather. Since it is a fast growing crop it can be planted late. It will make a hay crop in around 50 to 65 days, depending on conditions. Sow 35 to 45 lbs. per acre for hay, or 20 to 25 for a seed crop. Makes best hay when cut just before blooming. Being shallow rooted, it does not do too well as a pasture. Can be cut for seed when seed can be rubbed out of heads by hand. If combined let it get thoroughly ripe.

We have some very fine seed for you. It's all Gro-Coated Brand. That gives you greater assurance of getting satisfactory stands. See Item No. 225 on price list. Postpaid, 1 lb. 40c; 5 lbs., \$1.70; 10 lbs., \$3.00.

Proso or Hog Millet

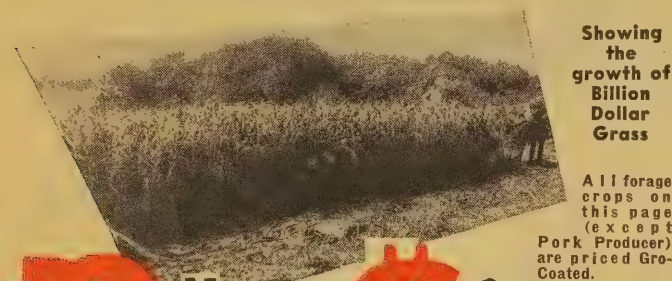

Also Known as Broom Corn Millet and Russian Wheat

This Millet is grown almost exclusively for seed. A very prolific producer. Seeds are larger than other millets. Makes fine feed. It is used in some countries for human food. Equal to Barley in feeding value. Makes extra fine poultry feed.

Proso is a heavy seed producer, yielding up to 60 to 70 bushel per acre. It matures in sixty to seventy days. Makes a good cash crop. Needs warm weather and soil for quick germination. Sow 40 to 50 lbs. per acre. Drill in close rows or broadcast. See Item No. 227 on Price List. Postpaid, 1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.50.

BERRY'S ANNUAL PORK PRODUCER

A rapid growing mixture of legumes, forage and grass crops. Can be used a few weeks after seeding. Very productive. High in protein. Builds big body frames, reduces grain consumption. Makes hogs of marketable size in quicker time. Contains Vetch, Rape, Rye, Barley, Oats, Wheat, etc. Sow 50 to 60 lbs. per acre early in spring. See Item No. 234 on Price List. This seed does not come Gro-Coated.

Showing the growth of Billion Dollar Grass

All forage crops on this page (except Pork Producer) are priced Gro-Coated.

Billion \$ Grass

This is a tall growing variety of Millet that has high yielding ability. With favorable moisture conditions it yields up to 26,000 to as high as 50,000 pounds of green feed per acre where produced. It also has the ability to produce a lot of seed. Seed yields of 1000 to as high as 2000 pounds per acre are reported. It does not stand heat and drouth as well as Sudan Grass or Atlas Sorgo. Yet we have had some wonderful productions even in dry years. This crop is especially grown in Iowa and states to the north and east, including the New England states. Farther south we would consider Sudan grass, Sorgo or Norkan better. Billion Dollar grass is a fast growing crop. It can make a hay crop in 6 to 8 weeks after seeding. Do not sow too early, generally around corn planting time or after, even into June or July. We recommend sowing 20 lbs. of seed per acre. It will grow up to 6 to 8 ft. high on soil of good fertility. It makes good feed for cattle and sheep. It is widely used for pasture. It does not become poisonous because of drouth or frost. By ordering early we can take care of your orders. For Price See No. 232 on Price List. Postpaid, 1 lb., 35c; 5 lbs., \$1.50; 10 lbs., \$2.50.

Berry's Seeds Best in Purity and Cost

Dear Sir: Mt. Horeb, Wisc.
I have a 115 acre farm and have been farming for myself 30 years. During that time I have bought from many different seed companies but the biggest difficulties were purity and high cost. But, during the past few years I have bought all of my seed from Berry's. Your seed cannot be beat for purity and reasonable cost.
Yours, Orvin Barton.

Quality High—Prices Low

Dear Sirs: Kyles Ford, Tenn.
I find your seed to be of the same high quality that you recommend. I get good yields. Also, the prices are low and I like your different grades of various seeds.
Sincerely yours, C. Jack Johnson.

OTHER MONEY MAKING CROPS FOR GRAIN, HAY AND PASTURE

CANE

MAKES TREMENDOUS YIELDS

This forage Cane is very rich in sugar and fat. It is a very palatable crop. Its yields are enormous as it produces 10 to 15 tons of excellent green feed on rich land. It also is a remarkable drought resister. If you want it for hay make the seeding at a heavier rate of 75 to 100 pounds to the acre. For a fodder crop you can drill it in rows as far apart as corn rows, using around 10 pounds to the acre, or double up the rows and use 20. For hay the heavier your rate of seeding, the finer the growth. Our seed is all Gro-Coated Brand.

Early Amber type, the kind most generally grown, a great value because of its splendid growing power. **Item 216 on Price List.**

Early Orange type, heavier stalks, more abundant leaves, heads more compact. Heavier yielder but a little coarser. Cane seed is more plentiful this year. **See Item No. 215 on Price List.**

WACONIA CANE

This is a variety that is used for sorghum purposes. We try to obtain this seed with a high degree of varietal purity. Since impurities may creep in and errors can be made, we do not offer this specifically as a cane for molasses purposes, but rather as a forage cane. Many customers tell us they have secured fine quality sorghum from it, but we do not assume any liability for a sorghum crop. **See Item 214 on price list. Postpaid, 1 lb., 60c; 5 lbs., \$2.50; 10 lbs., \$4.50.**

Photo of Hegari

"Showing the Superiority of Gro-Coated Seed Under Unfavorable Weather Conditions"

ENORMOUS YIELDING HIGH PROTEIN PASTURE

DWARF ESSEX RAPE

A Crop that Will Help You Reduce Pork Production Cost

This is a very rapid growing crop. It is one of the greatest of quick growing forage and pasture crops for the cornbelt. It can be pastured within 6 to 8 weeks after seeding. You can sow it any time from early spring until next summer. Rape is equal to Alfalfa in feeding value for hogs and sheep, and it also is good for calves, cattle and horses. With Rape pasture you can cut down the amount of grain that is required, and you will get your hogs ready for market quicker. In tests at the Iowa Experiment Station Rape pasture cut down more on grain consumption and tankage than when they were fed on Alfalfa and it carried more head per acre.

Rape, under favorable conditions, will yield 40 tons or 80,000 lbs. of green matter per acre. On a dry basis it analyzes high as 37% protein. It is also high in calcium and phosphorus. It is superior to Alfalfa and Clover as a corn balancer. Provides pasture from early spring until the ground freezes in the fall.

Rape is a crop that grows and makes a heavy leafy growth. The leaves look somewhat like cabbage leaves, but it does not form heads. One of the finest things about it is that it grows so fast. If you are looking for a quick pasture, especially for hogs and sheep, you will find it hard to excel Dwarf Essex Rape.

Be sure to grow some. Sow it alone in the spring or with Oats and pasture when the Oats are removed. Some sow about the same time they sow Oats, others broadcast when the Oats are up a bit, and let the rains cover it.

Only requires about 5 or 6 lbs. of the seed per acre. It grows on many soils. It does best on fertile, well drained loams. It is not so well adapted to sandy or stiff clay soil. Our seed is guaranteed genuine Dwarf Essex Rape. It's Gro-Coated Brand.

See Item 233 on Price List.
Postpaid, 1 lb., 50c; 5 lbs., \$1.85; 10 lbs., \$3.50.

Photo of Dwarf Essex Rape

Always Gets a Stand and Saves Money

Gentlemen: North Tazewell, Va.
I have been buying your seed for years and I always save money. Your seeds are just what you say they are and I have never failed to get a stand. I always speak a good word for Berry's.

Yours respectfully,
Joe N. Hunt.

HEGARI

This is a sweet sorghum, somewhat after the order of the Atlas Sorgho and the Norkan, described on the previous page. It does not grow as tall. The stalks are very sturdy. The crop is very nutritious, whether used as a fodder, for ensilage, grain or even as pasture. Hegari yielded up to 5000 pounds of grain per acre and up to 8 tons of ensilage. Livestock, especially cattle, are very fond of it because of its sweet taste. It combines the grain production of Kaffir and Milo with the high forage value of Cane. It matures earlier than Atlas. The growth is at least three foot shorter. **Item 217 on Price List for Gro-Coated Brand.**

MIDLAND MILO

THE EARLY MATURING COMBINE TYPE RIPENS IN ABOUT 90-95 DAYS

This new low growing Milo has become the most popular of all the grain sorghums. It has been dwarfed insofar as stalk growth is concerned. For grain production, however, it has remained very high. You can harvest this grain with an ordinary grain combine. Therefore, if the crop has matured so that the seed is good and dry, you do not have to first cut it and shock it, you can combine it right out of the field. Feeding value runs quite close to that of corn. You will find this extremely drought resistant. It makes good feed for cattle and widely used for chicken feed. You get good insurance of a crop of grain by having some of this drought resistant grain on your farm. We ship best available on orders. **Item 222 on Price List. It's Gro-Coated Brand.**

NORGHUM

One of the Newest and Earliest Grain Sorghums

This is a combine variety that originated in South Dakota. You know it has to be early. After last year's experience, that is what many will be looking for. A crop that is more certain to mature even if it is necessary to plant late.

This is a new variety. It wasn't released until 1949. As reported to us, over 50 types of sorghums were crossed to develop this Norghum. It is a selection from crosses of Dwarf Freed Yellow Kaffir and Dwarf Feterita. Under South Dakota and Nebraska conditions plants grew 36 to 46 inches high with an average of 40 inches. It has an open type seed head that sticks up high above the leaves. This head dries out well and is ideal for combining. Stalks seem sturdy and resistant to lodging.

Norghum is rapidly becoming very popular because of its heavy yield and high feeding value. In a 3 year test at 3 locations in South Dakota the average yield for Norghum was 47.7 bu. per acre; for Sooner Milo, 26.2. That's almost double. In feeding trials it took 513 pounds of Norghum to put a 100 pounds of gain on lambs as compared to 495 pounds of Corn. On hogs 357.5 lbs. of Norghum equaled 354.3 lbs. of Corn. So you see they are almost the same in feed value. Poultry raisers say chickens pick Norghum out of any other grain feed.

Drill 8 to 10 pounds per acre a little after Corn planting time in 36 to 40 in. rows. Our Seed is all Gro-Coated Brand. **See Item No. 219 on Price List.**

Sows More Acres Because of High Quality

Dear Sir: Freeport, Ill.
I have been sending to you for my seed for the past several years and have been well pleased. This last spring I sent in an order but when the seed came it looked so good that I decided to sow more. It has been very satisfactory.

Yours truly, Henry Kortemeier.

GRASSES

For Hay and Pasture

CRESTED WHEAT GRASS

See Item 140 on Price list

This is the most drought resistant of grasses in common use. Has made satisfactory growth with as little as 10 to 18 of annual rainfall. Has yielded 3 hay per acre and up to 900 pounds in more humid sections. It is a deep rooted, fine stemmed grass, growing unusually early in the May start two weeks before Brome. It is extremely winter comes somewhat dormant during weather. Starts up again with Stands close grazing. It is a fighter when well established. It is not difficult to eradicate. It is to get "sod bound" as quick-grasses. While grown mostly in the eastern and western states, it gives indication of being adapted to a much wider area east and south. Sow 10 pounds per acre. Seed is scarce this year. Please order early. Postpaid 2 lbs. \$1.20; 5 lbs. \$2.85; 10 lbs. \$5.50.

DOMESTIC RYE GRASS

See Item No. 128 on Price List

Quick Growth at Low Cost

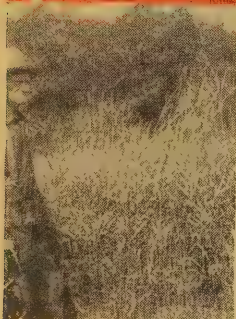

This grass is even a faster growing grass than the perennial Rye, but it should be considered an annual. It is a grass that helps to make a sod and a nice green growth early in the season. It produces a turf very quickly. This grass can be heavily productive with favorable soil and moisture conditions. It has recorded yields of 12 to 20 tons per acre in Europe. We cannot expect that here. The normal record of a single cutting being 1 to 2 tons per acre. While it is grown more extensively on the Pacific coast and grown there for seed production it is very widely used throughout the entire United States especially the entire West. When seeded alone, we suggest as much as 30 lbs. to the acre. In mixtures you can proportion it as you desire. Postpaid prices: 2 lbs. 75c; 5 lbs. \$1.50; 10 lbs. \$2.75.

PERENNIAL RYE GRASS

See Item 129 on Price list

Provides pasture while other Grasses are getting started. This does not grow quite as fast as Domestic Rye grass, but it lasts longer. It is not as long lived, or as hardy as grasses like Brome or Blue Grass but starts growing earlier in the spring. When sown in mixture with other grasses it provides quicker growth and it is therefore a good grass to use in mixtures. It prefers land of medium to high fertility. It can use quite a lot of water but is not a wet land grass like Meadow Foxtail or Reed Canary. Plants grow 1½ to 2 ft. high. Do not confuse these Rye Grasses with ordinary Winter Rye. They are totally different. Spring seedings are practiced where winters are apt to be severe. Sow 20 to 25 lbs. per acre alone or 8 to 10 pounds in mixtures. All of these grasses of course come in the Gro-Coated Brand only. Postpaid prices 2 lbs. 85c; 5 lbs. \$1.75; 10 lbs. \$3.25.

Reed CANARY GRASS

A Remarkable Grass of Great Value For Wet Land and Also Drought Resistant

You can grow this grass on exceedingly wet land. It can produce a sod on boggy land strong enough to support a team and wagon. On the other hand at the Iowa Experiment Station in one of the driest and hottest years ever known, Reed Canary stood out like an oasis on a desert. It yielded 3 tons per acre where it was so dry Sudan made only half a crop.

Grows 5 To 6 Ft. High

It is a very leafy grass. Yields up to 3-5 tons of cured hay per acre in two cuttings. Second crop is leafier, but not so tall. Tests have shown 9.43% protein in first cutting, 11.76 in the second. A seeding lasts many years. Stands of 18 to 20 years are not uncommon, yet the crop can easily be eradicated by cultivating. Seed yields of 100 to 400 pounds per acre are obtained.

Widely Adapted

You may ask, "Can I grow Reed Canary Grass?" It is adapted from the Atlantic to the Pacific in the entire northern half of the United States and as far south as eastern Tennessee. Fall seeding is perhaps best in southern states. Frank Litchke of near Enid, Oklahoma sowed Reed Canary grass in the fall. It has grown continually winter and summer for a long period of years. He grazed

20 head of Hereford cattle on 4 acres for 60 days continually and there was still plenty left. He also reported it made good hay and checked soil erosion very effectively in that wheat country.

Gordon Arbischer of Chilton, Wisconsin, says he gets 1 to 3 loads per acre per cutting. Ordinarily 4 tons per acre in two cuttings. Seed yields range up to 450 pounds per acre. Some of the land he has it on is subject to overflow for as long as 6 months. The stand has been kept for years.

When once established Reed Canary Grass starts growing early and stays until late in fall. You can get a hay and seed and pasture crop all during a single year. Ask for our free circular on Reed Canary Grass. Sow 8 pounds per acre. Small lots postpaid. 1 lb. 75c; 5 lbs. \$2.75; 10 lbs. \$5.25. See Item 141 on price list.

Skiatook, Okla.

Dear Sir:

I was very pleased with the seed I bought from you. It's more than satisfactory and has given me some of the best crops I have ever grown.

Yours truly,

Eugene Morgan.

Another good grass for wet land is the new Meadow Foxtail Grass. See page 18.

RED TOP

This grass grows under a great variety of conditions. It will grow on soils so poor in lime that most other grasses will fail. Stands a lot of wet conditions too. On the other hand it is very drought resistant. It is a grass that grows fast. It is used for quick pasture, helps prevent soil erosion on waterways. Is easy to get started. The grass grows from Canada to the Gulf, New York to California. It forms a turf quickly. It matures about the same time as Timothy and is often used in combination with it. A seeding lasts for many years. The seed of Red Top is very small. Ten pounds per acre is sufficient. Mixed four pounds per acre is good. Can be used as a top seeding on thin stands of hay or pasture lands. Sow early in the spring or late summer. Postpaid: 1 lb., \$1.25; 5 lbs., \$5.00; 10 lbs., \$9.75. See Item No. 127 on price list for quotation.

IOWA GROWN TIMOTHY

THE GRASS THAT IS MOST CERTAIN TO MAKE A STAND

Buy Timothy Seed at its Best

You can secure from us the finest of qualities in Timothy seed at money-saving prices. In addition you will get the seed Gro-Coated brand. The Iowa Experiment Station recommends treating grass seed. Our Gro-Coat process is more than a chemical treatment. See pages 2-3. This gives you a large, extra measure of assurance of stands. Timothy is one of the surest grasses to make a stand. It is adapted to a wide range of soil, and it has a great deal of value. A few years back there were some who discredited Timothy, but most of these opinions now are being reversed. It is recognized as one of the best grasses and is extremely popular in the eastern part of the corn belt. Iowa still remains the chief seed producing state and from here on east it is a very good grass. 10 to 12 pounds of seed sows an acre. We are not sure we will have enough seed for the season, so we do urge you to buy early. Also, read about our clover and grass combination in pages 18, 19 and 21.

Some Important Points on Timothy

Years ago a number of tests were made on Timothy as compared with ten other grasses. Over an average of a 16 year period Timothy outyielded all other grasses. A yield of 5309 pounds to the acre, the next nearest grass 1000 pounds less and some yielding as low as 2464 pounds per acre. Timothy can be sown either in the spring or in the fall. Spring seedings use 10 pounds to the acre; for fall seedings five pounds is enough. Timothy combines admirably with Red Clover and Alsike Clover. When you combine Timothy with clover you get a bigger yield than sowing either of them separately. You will get the best quality of Timothy hay by cutting it when the plants are beginning to head. You will get the biggest yields if you cut it when the seed heads are straw colored, before they are ripe.

All of this Gro-Coated Brand Seed is Guaranteed to Give You Better Stands than Any Other Seed, See Pages 2 and 3

Berry's Prices Save You Money on Timothy

On a comparative quality basis you will find Berry's prices consistently lower than the average. This is due in part to our policy of direct-to-you sales. That makes savings in every department.

We are at the door of the World's Largest Timothy seed producing section. We therefore, have direct personal buying connections. Transportation charges are lower. The cleaning machinery we have is designed to handle the crop efficiently. Supplies of Timothy seed are larger than last year. However, prices on all grass seeds are steadily becoming stronger. A few years ago Timothy seed prices more than doubled in a very short space of time. We do not expect such wild advances but we definitely do expect higher prices to prevail later in the season. We strongly urge you to order promptly.

World Brand Grade—No. 79 on Price List

This is our Extra Fancy Quality. It is a grade that most critical customers have been demanding and using for many years. It will run around 99½ purity and high germination. The seed is bright, plump and there is no seed that could give you better assurance of satisfactory results. We guarantee satisfaction. Our direct-to-you price gives you a big saving.

Dealer's Fancy Timothy—No. 78 on Price List

This Very Fancy Grade of seed is frequently sold as the best quality by others. It is also thoroughly re-cleaned, nice bright seed with good growing power. It gives really high quality at a still greater saving.

Price, Small Lots, either grade, Postpaid: 1 lb., 50c; 5 lbs., \$1.75; 10 lbs., \$3.25. All of our grass and clover seeds have Gro-Coat protection. See pages 2 and 3.

ORCHARD GRASS

Excels Brome in Summer Pasture Production

There has been a tremendous increase in the demand for Orchard Grass during the past few years. More and more thought is given to grass land farming. That demands a new evaluation of some of these older grasses. We have heard much about Brome. For the northern area, Brome is a splendid grass. Orchard Grass, however, is more productive and better adapted to the southern range of the Timothy region than smooth Brome. It will tolerate more heat, more drought, and will do better under lower fertility. It flourishes on rich soil but succeeds on light soil of medium fertility and also on moist heavy land. Oftentimes it does well where Kentucky Blue Grass is not successful.

It is one of the first grasses to start growth in the spring. While Brome is more resistant to winter killing, it cannot equal Orchard Grass in the spring because it starts its growth very early and you should start your animals on it before the seed heads form. Keep it pastured down.

Orchard grass is a bunch type of grass. It does not form as good a sod as Blue Grass or Brome, but makes an ideal companion crop for Ladino Clover, Lespedeza or Alfalfa. When grown in combination with these crops, you can also make very high quality grass ensilage from Orchard Grass.

When grown alone, Orchard will average one to two tons of hay per acre. With Clover, Alfalfa, two to three tons per acre can be expected. Sow about 20 lbs. to the acre if sown alone or 12 to 14 lbs. with a companion seeding of Red Clover, Alfalfa, or Lespedeza. If you are having trouble getting stands of Brome and are not too far north, use Orchard Grass. It's good from central Iowa or south. Learn what this crop can do for you before it has some wonderful qualities that all farmers should know about. It's a wonderful grass, too, for shady places.

One of the best for that purpose. Price in small quantities postpaid: 1 lb., 60c; 5 lbs., \$2.25; 10 lbs., \$4.25. See Item Number 142 on the price list. All Gro-Coated Brand seed.

KENTUCKY BLUE GRASS

Supplies are very short this year due to the smallest seed crop in the last 20 years. Stocks will not be adequate to take care of the requirements, so order Blue Grass early. Still by far the best seedling for lawns and provides a wonderful early cover before other grasses start growing. For new seeding in lawns sow 5 lbs. to 1000 sq. ft.; for renovating old stands 5 lbs., for 1500 sq. ft. Makes a wonderful meadow and pasture grass throughout the middle west. Genuine Gro-Coated Brand Seed—Postpaid: 1 lb., \$1.95; 5 lbs., \$9.25; 10 lbs., \$18.00. Item 125.

MEADOW FESCUE

A dandy grass for lawn or meadow. Will grow well in practically any climate and does not require the exacting care of bent grasses and other lawn seedings. Meadow Fescue is ideal for playgrounds and other areas subjected to unusually heavy wear. It is fine for pasture too, when mixed with other grasses. Our low price for Gro-Coated seed postpaid to you: 1 lb., 70c; 5 lbs., \$3.00; 10 lbs., \$5.75. See price list Item 143 for large quantities.

Had Real Success with Berry's Seeds

Dear Sir: St. Paul, Va.
I have been ordering my seeds from you for a number of years and like them better than any I have ever tried. I have had real success.
Sincerely yours, Barney Meade

Honest and Reliable in Every Way

Dear Friends: Windom, Kans.
I have found your Company to be an honest and reliable one in every way. I'm well satisfied with your dealings.
Yours truly, Arthur A. Anderson

LESPEDEZA

THE CLOVER THAT GROWS ON
POOR LAND WITHOUT LIME

Early Korean for the central corn belt

See Item
No. 75
on Price List

Berry's Early Korean has been widely known as the Early Giant Korean. It is a great producer and becoming more and more a crop of vital importance. The more farmers see of it the more anxious they are to start growing it. That is especially true during the hot summer months when Blue Grass pastures are thin and dormant. It is under these conditions that Lespedeza makes its best growth. It stands a lot of heat. It enriches the land, and makes very fine feed that is high in protein. It is often a life saver to have a field of Berry's Early Korean to give you high quality feed when you really need it.

This Lespedeza is also known as Strain #19604. It will mature seed 100 to 150 miles north of ordinary Korean. We consider this adapted to climatic conditions similar to those prevailing in the central and southern part of Iowa as well as in Nebraska, Kansas, Illinois, Indiana, Ohio, etc. It may be grown north of this area but we are not certain that it will mature seed north of central Iowa. U.S.D.A. states it will be a reliable

seed producer to the northern limits of Illinois. Another important factor is that the seedlings make an early start and seem to grow more vigorously than ordinary Korean.

Big Profit Features

Growth up to two feet has been reported in some dry years. It will stand a lot of hot weather. Will respond favorably to moisture conditions. You can grow it on very poor soil without lime or fertilizer. On the better land it will grow taller and heavier. We have had customers report that it grows twice as tall as common Lespedeza. It produces up to 1000 pounds of seed per acre. An Iowa farmer used it by sowing it with Oats in the spring. After the oat crop was taken off, a hay crop of Lespedeza was harvested in August and in October a seed crop was taken. That is three crops off the land in one year. Write for our Circular telling you more about this great Lespedeza and other varieties. All our Lespedeza seed is Gro-Coated.

Small Lots Postpaid: 1 lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.75.

Showing leafy growth of Lespedeza

SERICEA THE PERENNIAL LESPEDEZA

Item No. 76 on Price List
Comes Up from the Roots
Each Year

This variety if started early in the spring develops a big root system. Excels Regular Korean as a soil builder. Has wintered over as far north as Vermont, New York and southern Michigan. It is adapted throughout the corn-belt and very well suited to southern states. Produces one main stem the first year, the second year it sends out 10 to 15 stems and the following years the growth gets still thicker and finer. It will grow to a height of two to four feet. Has a large carrying capacity as a pasture. Cattle will eat it readily after becoming accustomed to it. Do not sow as early as most clovers; April is good for Iowa. Sow around 12 pounds to the acre. Some sow a little earlier than April. Makes a wonderful crop. Our free circular on Lespedeza will also tell you more about this great perennial variety. There are many valuable characteristics in this crop. We urge you to grow some of it.

Small Lots Postpaid: 1 lb. 50c; 5 lbs. \$2.25; 10 lbs. \$4.00.

Showing growth of Sericea

REGULAR KOREAN

Grows Most Anywhere. Wonderful Pasture and Soil Builder.

Korean Clover is an annual. It grows only one year from a seeding. It reseeds itself very readily, and matures seed even after plants have been killed by frost. Thus, it is proving itself adapted farther north than was first thought possible. It is steadily and surely working its way north into Iowa, Illinois, Ohio and Indiana. The Early Korean described above also helps to popularize the crop farther north. It is quite a common practice to put Oats on land where Lespedeza has reseeded itself. After the Oats are off the Lespedeza is there to give an abundance of pasture from mid-summer until frost.

Korean Clover shows its greatest value as a pasture. It will do best during the latter part of June, July and up to killing frost. It can be maintained in permanent pastures because it reseeds itself: You can sow it on winter grain or spring grain. After the grain is gone, the Lespedeza comes on to make its growth. While not tall, the stands are very leafy, and that is where most of the feeding value lies. The yields are surprisingly large from a stand that seems fairly short. The fact that it will grow on the poorest land without lime, and that it will resist more heat and drought than other clovers, makes it a very valuable crop.

Gro-Coated Brand Korean Clover Seed—It's Guaranteed

Regular Grade Fancy Unhulled Item No. 70 on Price List. The supplies of Korean Lespedeza seed are much shorter than a year ago. You will probably find prices higher later in the season. Scarified Korean seed with hulls removed germinates quicker. Requires only 1/2 as much seed per acre. Item No. 72 on Price List. Note: Iowa customers should order scarified seed only, to comply with State Seed Law provisions.

DELICIOUS AND NUTRITIOUS

Meadow Foxtail

A long season, perennial grass

DON'T CONFUSE THIS WITH FOXTAIL MILLET OR FOXTAIL WEED

Great For Wet Land

Will withstand long periods of overflow. Will stand considerable alkali as well as wet. Generally easier to get a stand of this than of Reed Canary Grass.

Adapted to upland. Grows in shade. Although basically a wonderful grass for wet land, it can give good returns on well drained sod of medium fertility that is fairly well supplied with moisture for winter and early summer growth. It is similar to Orchard Grass in its ability to grow in shady areas.

See Item 146 on Price List. Postpaid prices: 1 lb. \$1.90; 5 lbs. \$9.25; 10 lbs. \$18.00.

7 GREAT FEATURES

- 1 Unusually palatable forage grass.
- 2 Starts its growth early in the spring.
- 3 It has good winter hardiness.
- 4 Has a wide range of soil and climate adaptability.
- 5 Has long life.
- 6 Has a long growing season.
- 7 It grows in the shade and is heavily productive.

FREE CIRCULAR

Write for our free Circular for complete information

ALL PURPOSE PASTURE MIXTURES

We have prepared two mixtures which will serve as excellent mixtures for good rich soils over a wide area. The Mixture for Permanent Pasture we call Basic No. 1 and Pasture in Short Rotations 2 and 3 years, Basic No. 2. They are described herewith. Below each one we explain how you can adapt either over to a still wider range of soils simply by cutting down on the Basic Mixture and adding one or two additional crops. Thus it is simple to have it tailor-made for your particular conditions.

BERRY'S

BASIC No. 1

FOR PERMANENT PASTURES

This is a proven time-tested pasture seedling that will produce excellent results. It yields heavily. It provides plenty of pasture. There is ample grass to drastically reduce danger of bloat. There is a variety of feed that livestock likes. You get a long period of growth. Thus there are more pasture days and more pounds of gain per acre. That's what makes profits.

In preparing Basic No. 1 we have selected a splendid combination of grasses and legumes. Such a seedling will last for years. There is a little Rye Grass to establish a sod and provide some early top growth. Approximately 90% are more permanent crops which will begin production next year. The Trefoil will be at its best in the year following. All should remain for several years producing an abundance of feed for cattle or hogs.

This mixture contains approximately 25% Brome Grass; 25% Alta Fescue; 10% Orchard Grass; 5% Rye Grass; 25% Alfalfa; 5% Broadleaf Birdsfoot Trefoil; 5% Ladino. This gives you a combination of 65% Grasses and 35% Legumes. The Brome, Alta Fescue and Orchard Grass make up the bulk of the grasses. This is in no sense a cheap mixture but a top quality combination. All re-cleaned seed. It is carefully put together in our special designed mixers. It is shipped to you properly mixed together. It is of course Gro-Coated brand so that you may have the best possible assurance of getting satisfactory stands. Sow 16 to 18 pounds per acre. See Item 107 on price list.

ITEM
No. 107
ON
PRICE
LIST

BERRY'S

BASIC No. 2

FOR SHORT ROTATION PASTURES

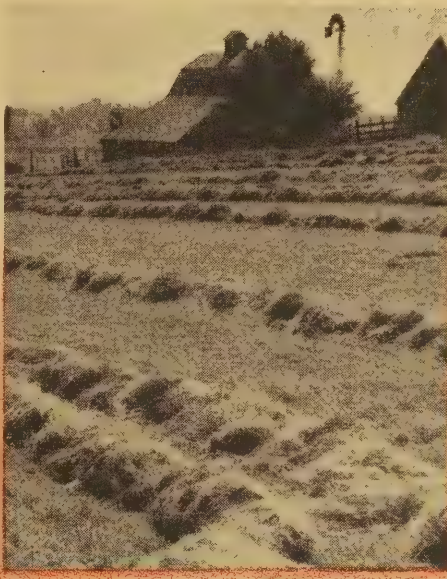

Your farming plan may call for a short Rotation pasture 2 to 3 years. This Mixture has been designed to give you a lot of feed in a short period. While it is made primarily for pasture you will also find it to give you good hay production. The percentage of clovers have been increased to give you somewhat higher nitrogen gathering crops. These are usually desired in shorter pastures.

As with Basic No. 1 this Basic No. 2 is fitted for the average type land good to fertile, well-drained land. It is built to give maximum production in the terms of pound of beef per acre. It will also make wonderful hog pasture and may be used for sheep.

Here, too, you can make the mixture fit your different soil types by simply sowing a little less of this and adding some of the crops listed below. Here again let us make it clear that we do not add any of the others for you. We could not possibly make the necessary analysis tags as many people would want it in different ways.

The Basic No. 2 comes to you all mixed and ready to sow. It contains approximately 10% Orchard Grass, 15% Alta Fescue, 15% Timothy, 15% Rye Grass, 20% Red Clover, 20% Alfalfa and 5% Ladino Clover. That then is about 55% Grass and 45% Clover. It is all Gro-Coated brand seed, thoroughly cleaned and ready to sow. Sow about 12 to 15 per acre. See Item 109 on price list.

ITEM
No. 109
ON
PRICE
LIST

How to Change Basic Mixtures to Fit Special Soil Types

For Moist or Poorly Drained Soil

If you have land that is inclined to be wet or moist we suggest that you use either Basic Mixture No. 1 or No. 2 at 10 to 12 pounds per acre and add about 3 or 4 pounds of any of the following four or some of each.

Reed Canary Grass
Meadow Foxtail

Alsike Clover
Red Top

We cannot make these mixtures for you as that would require special analysis tags. It is a simple matter to add a few pounds to the Basic Mixture just before you sow it.

It is a good idea anyhow, to stir the seed of a mixture because the clovers tend to work toward the bottom of the sack while shipment is on the way.

For Thin or Light Soil

Use Basic No. 1 at 10 to 12 pounds per acre and about 4 pounds per acre of any one of the following crops or use some of each if you wish:

Mammoth Red Clover
Red Top

Orchard Grass
Sweet Clover
(If land is not sour)

For Sandy Soils

Use Basic No. 1 at 10 to 12 lbs. per acre and add 4 to 5 pounds of any one of the following or some of each:

Crested Wheat Grass
Meadow Fescue

Sweet Clover
Red Top

Our Gro-Coated Seed is Guaranteed to Produce better Stands than any other Seeds

"Golden Acre" CLOVER COMBINATION

SIX DIFFERENT LEGUMES

This is a great combination that we have prepared to meet the demand of many customers. Some have grass seed of their own and want a variety of Clovers to mix with it. Others prefer to make a seedling of straight clovers but like a variety. They figure there are several advantages to this. First, if one fails to catch due to unfavorable soil or weather conditions there are plenty left to make a full stand. When used in pasture combinations the different clovers give a prolonged pasture season as some do best when it is hot, and others early. Even when cut for hay it is desirable to have a good aftermath for pasture or plowing under green. If you happen to strike a wet year there is Clover for that kind of a season.

Alfalfa, Red Clover, Sweet Clover, Alsike, Ladino and Birdsfoot Trefoil

We can give you an exceptionally low price on this wonderful seedling because we can use in it some lots of seeds that are grown mixed. Those can be bought at sharp discounts under the prevailing market. We add other clovers to make a balanced seedling. Red Clover, Alfalfa and Alsike makes the largest percentage. Also contains enough Ladino to produce a nice stand of that valuable Clover in with the others. The addition of about 10% Birdsfoot Trefoil also adds greatly to its value. See Page 27.

7 to 8 pounds per acre will give you a good stand. That makes the cost of seedling exceedingly low. **SEE ITEM NO. 58 ON PRICE LIST.** (If you have mislaid our price list please drop a post card and another one will be promptly sent.) Remember, our prices are for Gro-Coated Brand Seed.

Husband and Wife Are Well Pleased

Dear Sir:

I would like to say that I have bought seed from you for the past 15 years. It has been very satisfactory and I have always been pleased with the way you handled my orders. Also, my wife continues to buy her garden seed from you year after year.

Dexter, Minn.

A satisfied customer,
Harry Skov.

Has Found Us Reliable and Fair

Gentlemen:

I have been buying all my field seeds from Berry's for several years. The seed has always been very satisfactory as to quality and price. Also, I have found you to be reliable and fair in all dealings.

Very truly yours,

Harrison, Ark.

E. C. Hathcoat.

The Famous Fescue Grasses

WIDELY ADAPTED

HEAVILY PRODUCTIVE

FINE FOR PASTURE AND MEADOW

These grasses have such great merit that we want to emphasize their importance. They should be in pasture on many farms. Missouri is now giving strong recommendation to these because they withstood 1953 drought best of all.

ALTA FESCUE

This is an improved strain of the Tall Fescue. It should not be confused with the Meadow Fescue which perhaps has been more commonly grown. Alta Fescue grows much taller and has more dark green basal leaves. They are much broader than that of Meadow Fescue. The plant has a long growing season. Where winters are not severe it will in fact remain green all winter. It is not as winter hardy as Brome Grass but it will grow satisfactorily with around 15 to 18 inches of rainfall. While it prefers fertile moist, rather heavy soil, it will thrive on many soil types except those that are extremely light. Alta Fescue has a heavy root system that will penetrate heavy sub soils. It is moderately tolerant of alkali if moisture conditions are favorable and will thrive on quite acid soil.

We are unable to tell the difference between Alta Fescue and the Ky. 31 Fescue. We do not know of any authorities who can tell them apart, therefore the information given here, and on Ky. 31 in the opposite column apply equally to both varieties. They have tremendous capacities as pasture plants, also make good hay on fertile soil.

THREE ALTA FESCUE VALUES

We have obtained three wonderful values in this seed. (1) State Certified Seed. (2) A high quality re-cleaned lot of seed (3) A beautiful lot that contains about 9% quick growing Rye Grass. Any of them are capable of giving you excellent results: **Special Mixed Lot, See Item 148. Non-Certified Item 149. Certified Seed, Item 150.** Certified Seed, small lots, postpaid, 1 lb., 55c; 5 lbs., \$2.25; 10 lbs., \$4.25.

KENTUCKY 31 FESCUE

A Missouri authority states 1953 drought killed 75% of the Timothy and 90% of Lespedeza, but this tall fescue stayed green and recommend its use.

This is also a selection of the tall Fescue. It was made from a Kentucky strain. One of our own men who has a farm near Clarinda, Iowa, sowed five acres to Kentucky 31 Fescue, the other with some Alfalfa and Red Clover. It is one of the "first" fields in this area and farmers drove from miles around to see it. Everyone who saw it decided then and there they wanted some of it. This five acres was the poorest on his land. It is hill land and he sowed it in 1949 and began pasturing it in April. He had 35 head of hogs on it all summer. It grew so fast he had to cut it for hay. He took off 150 bales of hay and as soon as the hay was baled, the hogs were back on and stayed on until early October. The 10th of October the growth was still so dense it was like walking on thick carpet. The leaves were heavy, green and succulent, extended they ranged up to three feet long. See Item 145 and 147 on price list. Certified postpaid: 1 lb., 55c; 5 lbs., \$2.25. Regular Ky. 31, postpaid: 1 lb., 50c; 5 lbs., \$2.00.

NEW SOFT LEAF ALTA 144 FESCUE

This is a superb new strain of Alta Fescue. The leaves are darker green, softer and smoother. They remain palatable for a longer period. Live stock like its lush, green growth. Even as it gets older it still retains this soft texture. You can readily see why there is such a tremendous demand for this new grass. It has an extremely long growing season. Where winters are not too severe it will stay on the job year around. It is even deeper rooted than the regular Alta or Ky. 31. The plant can use deep soil moisture throughout the summer. It will thrive on most any soil excepting light land. It will stand a lot of overflow and quite wet conditions in general, yet it is also a good drought resistant grass. It has the same heavy root system described in the Alta Fescue above. It helps to put a lot of humus in the soil. In Alta 144 Fescue you get everything that regular Alta or Ky. 31 can give you plus the softer leaf.

The Finest Certified Seed

The demand for Alta 144 Fescue last year exceeded our supply. We are better fixed this year. We have arranged for a good supply of finest quality certified seed. It's a beautiful Blue Tag grade. You can't buy it any nicer. We couldn't arrange to have it Gro-Coated in the production area so we had to break the seals when the seed came to us in order to Gro-Coat it. While there will be no state seals attached it will be the genuine article and every pound Gro-Coated to give you greater assurance of getting better stands. Price postpaid: 2 lbs., \$1.15; 5 lbs., \$2.50; 10 lbs., \$4.75. See Item 144 on our price list.

Dear Sir:

I got the best hay crop from the seed I bought from you two years ago that I have ever had on my farm.

Sincerely,

Kettle River, Minn.

William A. Karki.

Gentlemen:

I have always found your seed to be of good quality and have had consistently fine results with it.

Very truly yours,

Bertrand, Nebr.

Swenson Brothers.

MARVELOUS MIXTURE

2/3 CLOVERS

BALANCE
TIMOTHY
& KY. 31 FESCUE

Item No. 95 on Price List

EXTRA RICH—EXTRA GOOD

The Most Popular Clover and Grass Seed Mixture

Now Better Than Ever Before Contains More Clovers and It's "GRO-COATED" BRAND

ECONOMICAL AND HIGHLY SATISFACTORY

QUALITY GUARANTEED TO PLEASE

This always has been our biggest selling mixture. When we increased the clover contents to over 65%, sales zoomed up still higher. This year it is still better because we have included some Kentucky 31 Fescue with the Timothy. That grass gives a sensational performance under drought conditions. It survived where 75% of the Timothy died. This seeding will give you an average of 50 to 60 clover seeds per square foot when sown at 10 pounds per acre. You have about the same number of Timothy and Fescue seeds in addition. Feeding value is very high.

A SEEDING THAT LASTS SEVERAL YEARS

Such a combination of Clovers and grasses makes extremely heavy yields of hay. Our customers report highly satisfactory results. Big crops. Fine quality and big savings in cost. Many use it. The Alfalfa seed in the mixture helps to establish the crop on your land. The Sweet Clover opens up the soil and adds much nitrogen. The Red Clover and the Alsike fill the lower growth while the Timothy and Fescue support them and add to the weight and growth of all. It is a great seeding and our customers are enthusiastic about it. Year after year Marvelous Mixture continues to be our biggest selling item.

We will gladly send you sample to show the heavy, quality clover content. Thousands of satisfied customers praise Marvelous Mixture. Some of the letters reaching us read as follows:—"Never had a finer stand. Saved about half in buying this item." "Have been using it several years with the best stands and yields of any seed used." "Got 21 loads off 9 acres first cutting and 11 loads of Alfalfa second cutting." "Have used Marvelous Mixture for 8 years and never been disappointed." We will send your money back if you do not consider it a great value on which you have made big savings. See page 33 for guarantee on all seed.

PROFIT MAKER

You too, can become enthused over its wonderful production and high feeding value. See how it checks soil erosion and enriches your land. That dense heavy mat of Clovers is a joy to behold. We sell many thousands of bushels of Marvelous Mixture every year. With present low prices on such a combination of all home grown seed, its sale should smash all previous records. In our opinion there is no other mixture that will give you as much Clover for the money as you will obtain in this Marvelous Mixture. See Item No. 95 on Price List.

Berry's Famous 5 WAY MIXTURE

Item No. 100 on Price List

Contains Red Clover, Alfalfa, Alsike, Timothy and Ladino

Now Contains 50% of Clovers, Including Ladino—See Sample Enclosed

Every year our Famous 5 Way Mixture comes closer and closer to Marvelous Mixture in popularity. It is finer and better than ever. The percentage of Clover is heavier, 50% of clovers by weight, including some of that expensive Ladino Clover. It is a splendid mixture for semi permanent meadows and pastures. One that provides both quantity and quality of feed. Sow 8 to 10 pounds per acre. Similar to Marvelous excepting that we do not put the Sweet Clover into it. This is Gro-Coated. You have extra assurance of better stands and larger yields.

You can thus figure on a very reasonable seeding cost and a mixture that will give you top results. It is all

domestic seed and contains no imported item. We are able to buy many lots of mixed seed at a discount just because they are grown in a mixture. We blend such lots together and add Clovers or Alfalfa as may be required to make it as uniform as possible. Its high Clover content means big yields in addition to fine feeding and soil building qualities.

This mixture is just next to Marvelous Mixture in sales to our customers. We do not add any Sweet Clover to this combination. It has straight Timothy for the grass seed item. There are other combinations listed throughout the catalog but we believe this is one which will please you as much, if not a little better, than most. The selection of a mixture to suit your requirements will depend somewhat

**GRO-COATED
BRAND SEED**
"More Than A
Chemical
Treatment"
See Pgs. 2&3

Ransomville, New York.

Dear Sir: I sowed Gro-Coated Marvelous Mixture and Alfalfa seed and am very well satisfied. The crop is far ahead of that from seed not Gro-Coated. It is the finest stand I have obtained in 27 years of farming.

Very truly yours,
Raymond Bradley.

Wilson, Kansas.

Dear Sir: The Gro-Coated Alfalfa Seed that I sowed came up good. I sowed less seed than usual yet I got a better stand. It was planted on a creek bottom and it was flooded twice with four feet of water but there is still a good stand.

Yours truly,
Arthur, Grubb.

on your soil and seasonal conditions and the purpose for which you want the crop. We have combinations to suit almost every purpose and also we have mixtures at different prices to fit most every pocketbook. Whatever your seed needs insist on Berry's Gro-Coated Brand for best results.

LOT GOLD

99½% PURE

92% GERMINATION

Northern Grown—Extremely Hardy

If you have not ordered this seed before we ask that you examine the enclosed sample of World Brand Ranger, Lot Gold looks like that. Compare our prices. In addition to a wonderful seed value you get the added protection of our famous Gro-Coated Brand processing. Extra assurance of vigorous healthy growth and heavier stands. Many of our customers have actually written us stating that our Gro-Coated Brand seed is worth \$5.00 more per bushel than "regular" Alfalfa seed. No other seed house offers such valuable protection on proven, quality tested seed. **See Item No. 16.**

Paulding, Ohio

Sincerely yours, Ben Rager

Heavy Yielding-Wilt Resistant **BUFFALO** *Alfalfa*

**SEE
PAGES
23-29-30**
*for other
Alfas*

The Buffalo is not quite as winter hardy as Ranger. We be-

lieve it hardy for most of Iowa and other sections having similar climatic conditions. That would include most of the states to the east and south. Our tests indicate Buffalo will recover more rapidly after cutting than northern alfalfa or Ranger. It is a tremendous yielder being about equal to Kansas common. It makes a fine quality of leafy hay. Tests at the Iowa Experiment Station showed an average dry hay yield of 4.01 tons per acre for a four year period. This was considerably higher than other well known varieties tested. Kansas reported a 95% stand after four years from Buffalo, while its nearest competitor had only a 25% stand. This is typical of reports from other states. You will find descriptions of three very splendid values in Buffalo alfalfa to the left. Any should give you very satisfactory results. They are all Gro-Coated Brand seed. Many farmers sow less seed per acre when they sow Gro-Coated Brand seed while others sow the regular rate and reap extra dividends.

**CERTIFIED Buffalo
Blue Tag Quality**

As explained under Ranger, Certified seed comes from fields which have been inspected by the State. The seed itself also has been inspected and tested, and is also in Blue Tag quality you get the finest in Blue Tag quality you get the finest that is produced. You have here complete varietal purity because it is produced from Foundation seed. Each one of these seeds carries these wilt resistant characteristics and heavy producing ability of that plant. It is produced in the west and carries maximum of winter hardness to be found in Buffalo Alfalfa. Many states now require some kind of seed treatment be used in planting foundation or registered seed stocks to be eligible for Certification. No state requires any seed treatment on the Certified product which we are offering. Berry's Gro-Coated Brand gives you the greatest protection as our research and years of tests go beyond any comparable program of any state to our knowledge. **See Item No. 21 on our price list.**

WORLD BRAND BUFFALO

This is also top quality genuine Buffalo Alfalfa seed 99.25 purity and 90% germination, but Certification wasn't completed due to growers' negligence in most cases. We obtained it, however, from sources that we consider highly reliable. In Gro-Coated Brand seed this quality is as good a buy as regular Certified, for Certified seed only means varietal purity and quality and can't be Certified again if seed is produced from it. We have the same thing here at a big savings while it lasts. See Item No. 22 on price list.

Lot Special BUFFALO

This seed comes from the same fields that produced Certified Buffalo but the analysis is not good enough to make the Blue Tag grade. Therefore, it is not Certified. It represents a Choice to Fancy quality of seed. It generally runs 98% purity, around 75% germination. It is fully capable of producing excellent stands. We sell many carloads of this quality of Alfalfa in other varieties each year and they give splendid satisfaction. The seeding rate need be no heavier because the berries are smaller. A truly money saving value. See Item No. 23 on our price list.

**Better Stands
Guaranteed or
Extra Cost Refunded
See Pages 2 and 3**

Gentlemen:

Last spring I sowed **Gro-Coated Alfalfa**, Red Clover and a pasture mixture. I used less seed than normal, yet I got a more even catch. The plants also seemed healthier and grew more vigorously.

Very truly yours,
Raymond Nelson

FOUR GREAT VALUES

"RANGER" WILT RESISTANT ALFALFA

The Most Popular Alfalfa for 1954

Ranger Alfalfa is a new variety that has made a wonderful record in the past few years. State Experiment Stations and county farm advisors are recommending Ranger. It is especially valuable where bacterial wilt is active. The areas infested with this wilt are becoming wide spread. If that hits your Alfalfa field there is nothing you can do to stop it. The only way out is to grow a wilt resistant strain and Ranger is one of the best. If you plan to let your field stand more than two years we strongly recommend you consider Ranger. Farm papers are strongly recommending increased Alfalfa acreage. They generally suggest Certified Seed. It is good. We have it. We believe that in certain areas of production, genuine Ranger can be obtained from inspected fields that are not certified. This seed should give good performance and can be purchased at lower prices. Our World Brand and Lot Vitality described below is seed of this character. The Buffalo described on the opposite page is also wilt resistant but not quite as winter hardy. It is true however, that what is sometimes called winter killing is really the result of bacterial wilt.

Ranger Is Hardy, Fine Stemmed, Leafy, Long Lived

It is the most winter hardy of the wilt resistant types. Widely adapted and especially recommended for the northern half of the corn-belt across the nation. See map page 32. We have four very special values in Ranger Alfalfa as listed below, all Gro-Coated and every one a splendid value.

Berry's
GRO-COATED
Alfalfa Seed
is Guaranteed to
Produce Better
Stands

WORLD BRAND NORTHERN

Enclosed Sample Shows World Brand Quality

This seed is produced in northwestern states like Washington. It doesn't come from the coastal areas, but inland past the mountain ranges. In this area it gets really cold. It produces Alfalfa seed of hardy character. Ranger is well known as an extra hardy Alfalfa and those characteristics are maintained in this section.

All farmers who grow Ranger Alfalfa for seed do not have their seed certified. They do not care to go through the "red-tape" required for certification or drop out due to a technicality. The seed they produce, however, is beautiful. It's just as nice as the finest certified seed. It does sell at a discount because it doesn't carry the special tag. Many farmers say they get splendid results and very satisfactory production from this type of seed.

You will find our World Brand Northern Ranger of top quality. Plump, bright, high germinating seed. Free of noxious weeds. The grade is unexcelled. It's priced to save you real money. It's Gro-Coated brand too, so is guaranteed to produce better stands as explained on pages 2 and 3 of this book. See Item 27 on price list. Any lot on this page postpaid. 1 lb. 75c; 5 lbs. \$2.85; 10 lbs. \$5.50.

CERTIFIED NORTHERN RANGER

Place your order early—supplies limited. This is the finest Blue Tag quality seed. There is nothing better. To make "Certified" seed the fields must be properly isolated and sown with foundation seed stocks. Fields are examined for varietal purity. Seed is harvested, cleaned and sealed under state supervision. All this costs extra money, but there are many who prefer to get "Certified" seed.

While it is true that "Certified" seed is equally hardy, no matter where it is produced, we find a majority of farmers prefer Northern grown seed if it is available. This is especially true of farmers in northern areas as well as in the central corn belt. Last year supplies of northern grown seed were very short. This year we have arranged for a much better supply. However, even this may not be enough. The demand last year was extremely heavy.

We can take care of your order without trouble if you will not wait until the last minute. Mail us your order as soon as you know what you will need. You will find your investment in seed of this character a wise one. Get started with this wonderful, heavy producing, wilt resistant Ranger. Be sure you get it Gro-Coated brand. It's guaranteed. See pages 2 and 3. See Item 26 on price list.

SEE PAGES 22, 29 AND 30 FOR OTHER ALFALFA VALUES

LOT "VITALITY" RANGER

In order to make certification, the seed must be of the finest color, size of berry, etc. This sometimes causes a lot of good serviceable seed to be taken out in the grading process. There may be smaller sized berries and some a bit off color. We know, and a lot of our customers know that seed of this kind can produce splendid stands. There are more seeds per pound so stands are heavy even though germination may be a little lower per 100 seeds. In Lot Vitality, we use these lots and others not certified. It's priced so low that it's a great value. The seed has Gro-Coat Guarantee—Page 2. We can't always get this, so order early. See Item 28 on our price list.

CERTIFIED WESTERN RANGER

This seed is produced under the same strict regulations prescribed for the Northern as explained above. The only difference is this seed is grown farther south. It comes from areas in California, Arizona and New Mexico. Last spring we checked with Experiment Stations in states like Minnesota, Wisconsin, Michigan as well as ones farther south like Iowa, Illinois, Indiana, Ohio, etc. They stated that "Certified" Ranger produced in those sections was considered adapted to their state. This is Blue Tag Quality.

Since the yields of seed then are generally heavier the price of this Certified Western Ranger is lower. You can make an extra saving on this seed. It's all Gro-Coated brand, of course. See Item 25 on price list.

OUR BIGGEST SELLING CLOVER VALUES!

All these Red Clovers
are Medium Red

All of these
lots are Guaranteed
to Produce Better Stands
See Pages 2-3

This is a beautiful lot of seed. This hardy Red Clover seed was purchased at a very sharp discount. Our buyers found some lots that contained some Alfalfa seed. The crop purity was high but because it contained Alfalfa it could not be sold either as Red or Alfalfa and therefore the discount. In order to make these lots uniform we have added sufficient high quality Alfalfa to make approximately 25% alfalfa seed. There are many farmers who make a practice of sowing mixed seed. Therefore, to those such a seeding is an unusually attractive offer. This seed is all thoroughly cleaned, all high in purity and strong in germination. You can use this seeding just this way and it will make a splendid combination for you, we suggest 10-12 pounds per acre. Or you can take it as a base for any other combination that you may wish to make. We are constantly striving to give our customers the benefit of our wide experience and great purchasing power. In this Lot Beauty we have a matchless value. It's beautiful seed, free of noxious weeds, 99% crop (Red Clover-Alfalfa) purity. See Item No. 31 on price list for quotations.

LOT CHAMPION ITEM No. C 60% Alfalfa—40% Red Clover

Last year we offered this Lot Champion for the first time. It proved to be the most popular legume seed value of year. We couldn't get enough of it. The price this year is much lower and the value even greater. This seeding has a total crop purity of 99%. It is free of noxious weeds.

It is beautiful, hardy northwestern grown seed. The reason for the low price is that the bulk of this comes from crops that were grown mixed like Lot Beauty described above. In this case, it was mostly Alfalfa. The percentages are not exactly 60-40. Different part of fields vary in percent of each crop, but it will run close to this figure. There may be a trace of 3% to 5% of other crop seed such as Sweet Clover. That is why we are able to sell it at such a drastically low price.

For color, size of berry, freedom of weeds, strength of germination, and hardness this Lot Champion is outstanding in its value. It is a 5 star value you have to see to appreciate. Thousands of farmers like a combination of these proportions. You'll have about an equal number of Red Clover and Alfalfa seeds. Because Red Clover seeds are smaller and there are more in a pound. Sowing 10 pounds per acre should be ample for a good stand. This is especially true since it's Gro-Coated brand. Be sure to read our Gro-Coat guarantee on page 2. Never before have seeds been backed like this.

Please order early. Values like this can't often be duplicated. See Item C on price list. Postpaid any item on this page 1 lb. 65c; 5 lbs. \$2.10; 10 lbs. \$4.50.

LOT LEADER

Red Clover With 25% Timothy

Beautiful plump clover seed with lots of purple berries. The kind of seed that commands premium prices. Quality buyers will be delighted with this value. The total crop purity is 99% or better and the germination high.

The use of Timothy with Medium Red Clover is good practice. The two crops help each other. Timothy helps the clover grow erect. It helps make a better sod. Superior for erosion control. The Red Clover increases nitrogen in soil. That helps growth and increases feeding value of Timothy. Generally a combination seeding like this will produce a large growth and finer quality than either of them will produce when grown separately.

The percentage of clover in this is so heavy that for practical purposes it is the equivalent of straight clover. If you want to pasture it, the presence of Timothy helps to reduce bloat danger. High quality seed that can be obtained at sharp discounts because it is mixed. Buy it mixed and make a saving. See Item 96 on our price list.

Rosalie, Nebr.

Dear Sirs:

I never had a stand of Alfalfa and Clover as nice as I had this year. I sowed less seed per acre, and got a better growing crop. I sure want Gro-Coated seed on my future purchases.

Harvey Thield

ALFALFA, RED CLOVER & TIMOTHY Big 3 Mixture 60% Alfalfa and Red Clover

This splendid seeding is similar to our Famous 5 Way Mixture described on page 21. This however, does not contain the Alsike and the Ladino and it contains more Clovers, 60% of clovers and Alfalfa combined, and approximately 40% of Timothy. If you want something with Alsike and Ladino you can select the Lot Just-Rite described below, or if you want them all take the 5 Way. This Big Three however, with its extremely high Clover percentage is even a greater value. The addition of Timothy is a big help in many ways. It makes a better sod than just clovers alone. This is valuable where you have trouble with soil erosion. With the grass in it there also seems to be a little less danger of heaving in the spring which so often times kills out straight clover or Alfalfa seedlings. Clovers feed nitrogen to the Timothy so that it increases in feeding value and the Timothy also helps to hold the Clovers and alfalfa more erect. There are two basic reasons why we are offering our trade so many prepared mixtures. One; it saves you the trouble of doing so, two; we can give you as a rule greater values because we can buy mixed lots at lower cost than we can buy the straight seed separately and then mix it and make combinations that we report. All of the seed on this page, all of our grasses and clovers are Gro-Coated which we consider a tremendous advantage. Suggest sowing about 10 pounds to the acre although you can sow less. Item No. 102.

LOT Just-Rite RED CLOVER

With Alsike, Ladino and Timothy
Now Contains 50% Clovers

Here is one of our favorite combinations made richer and better than normal. Mixed seedings are becoming increasingly popular. Timothy is considered one of the best grasses to use with Clovers. It helps these legumes to grow erect and it is better than straight Clover for soil erosion control. The Timothy roots hold the soil better. The Clovers feed nitrogen to the Timothy, thus increasing its growth and improving its feeding value. In many areas payments are being made for making such seedings. But whether you get "outside" money or not, it is good business to hold the soil you have by using grass seed. Use the Clovers to build up soil fertility and to produce high protein feed.

A Highly Satisfactory Seeding

You can get an excellent stand by sowing at the rate of 7 lbs. per acre. In fact at 6 lbs. per acre you will have an average of over 24 clover seeds per square foot, plus the grass seed. It is economical and you have practically double assurance of getting a good stand. There is plenty of both Red Clover and Alsike, so if either should fail completely there still would be a good stand of the other. Alsike will stand more wet conditions and more acid soils than the Medium Red Clover. The Ladino Clover adds a great deal to the value of this seeding. See Page 27 for information on this wonderful crop.

The seed is all hardy cleaned stock. The seeding has the ability to produce excellent stands of heavy yielding hay or pasture crops. The feed is of excellent quality. You can build up your land and check erosion with it. You can save very materially on your seed bill. This Lot Just Rite Mixture has been pleasing our customers for years. SEE ITEM NO. 103 on PRICE LIST for "GRO-COATED" price.

Arkdale, Wis.

Gentlemen:

I compared Gro-Coated Alfalfa seed with other seed which was not Gro-Coated. The stand from your Gro-Coated seed is almost twice as great.

Walter Cappel

HARDY RED CLOVER

Berry's Famous **WORLD BRAND QUALITY**

IDAHO

World Brand Quality

Idaho grown Red Clover always commands a premium on the market. The seed is unusually beautiful. It has fine color. It is bright, clear and clean. The plump seeds are full of vitality. They have strong germination. This seed is produced under conditions that make the finest quality possible. There are thousands of farmers who greatly prefer Idaho Red Clover over any other.

In our World Brand grade of Idaho Red Clover you will receive an extra fancy quality. It is as nice as money can buy. The seed will average 99% pure, 90% or better live seed. You can have the satisfaction of knowing when you sow this seed that you cannot buy a better quality. Of course, when the seed comes to you it will be Gro-Coated and that, of course, covers up this bright appearance. If you will just rub a little bit in the palm of your hand you will see that bright color underneath which indicates its very strong vitality and its ability to make splendid stands. By having it Gro-Coated, of course, you are guaranteed better stands than you can get from any other seed. See page 2-3. Some customers say they can sow less seed, and thus it costs them less than anything else to use. Other customers prefer to make their regular seeding and to make their gains from the heavier stands that result. See Item No. 35 on the price list for quotations.

LOT MORE HARDY IDAHO

This comes from the same area producing our World Brand described above. It contains a small amount of crop seed like Alfalfa, Alsike or Sweet. There is about 4% of that crop seed in Lot More Hardy. Aside from that it is equal to the World Brand listed above for quality. It can be purchased at a big saving. See Item No. 36 on the price list for quotations.

Wonderful Service—Big Yields

Sirs: Le Sueur, Minn.
I have been well pleased with the seed I bought from you. We have had excellent yields and wish to thank you for your wonderful service.
Very truly yours, Harold C. Budke.

WORLD BRAND

Central States Medium Red

Extra Fancy Quality at Money Saving Prices

Medium Red Clover is one of our feature items in value giving this year. We accumulated very fine stocks early. This is what makes it possible for us to give you the values that are offered at this time. See enclosed price list for quotations or get our latest price list. We guarantee to give you more value for your money in Medium Red Clover than is obtainable anywhere else. That is a broad statement. We are willing to back it up with a money-back guarantee. Your money, plus freight, refunded if you do not find this the finest high-quality Red Clover value on the market today.

This seed will come to you with the Gro-Coat protection. That, of course, assures you of getting best possible stands from this seed. Read pages 2 and 3 of this book. This Coating that we put on this seed naturally gives it a dull-looking color. If you will rub some of this seed in your hands you will bring out that beautiful bright color underneath so you can see that you are getting as nice a quality of Central States Red Clover as money will buy. In many areas supplies of Red Clover are much shorter than they were last year. There will probably be a tremendous demand because drouth has caused some seedings of last year to go out. Therefore, you can expect advancing markets. This is why we recommend to all our customers to buy Red Clover seed just as early as possible this year.

In this Central States Medium Red Clover you will get seed that is thoroughly adapted to the Corn-Belt. You will find it thoroughly dependable and we are proud that we can offer values like this to our trade. Small lots, either Idaho or Central States: 1 lb., 70c; 5 lbs., \$3.00; 10 lbs., \$5.50, postpaid. See Item No. 34 on price list for other quotations.

Saves 1/3—Gets Heavier Stands

Dear Sir: Fennimore, Wisc.
With some of our seeds, I get heavier stands at a savings of as much as one third less cost.
Sincerely yours, Clarence R. Block.

KENLAND

State Certified Seed—Blue Tag Quality

Kenland is a variety of Red Clover that has been bred especially for disease resistance. In producing this Clover seven superior strains of Red Clover especially adapted to the southern corn-belt were subjected to heavy inoculation. The plants that survived this disease were then intercrossed and same general nose for several generations. While it was mostly selected from this cross. It has the far superior to adaptation as the Cumberland but it is a disease resistant in its anthracnose resistance. Montana Experiment Station states in their bulletin that it is a disease developed over a wide area. Montana Experiment being used over a wide area. Montana Experiment Station states in their bulletin that it is a disease resistant variety that lives longer than other Red Clover grown in the Red Clover belt of the United States. You can be assured of genuine Kenland produced from foundation stocks in our certified seed. The certified seed is not Gro-Coated because we do not break the seal unless you order in quantities other than the regular 60 pound size. Small lots postpaid: 1 lb., 75c; 5 lbs., \$3.50; 10 lbs., \$6.50. See Item No. 37 on Price List enclosed.

OUR EASTERN SHIPPING POINTS MEAN BETTER SERVICE AND BIGGER SAVINGS FOR EASTERN CUSTOMERS

BE SURE TO INOCULATE CLOVER

SEE SEE PAGE 34

FANCY GRADE

This Fancy grade runs our World Brand described above, a very close second. This is Central States Red Clover. Normally, it runs around 98% purity and 85-90% live seed. It may contain a trace of crop seed. You will find it very free of weeds and capable of producing a splendid stand for you. It is Gro-Coated, of course, the same as all of our Clovers. It will give you a very good Clover seeding at an extra saving in seeding costs. See Item No. 33 on price list.

PLANET OR CHOICE GRADE

This is also Central States Red Clover that contains a few more smaller and off-colored seed than in the Fancy or World Brand quality described above. However, with more berries per pound this is a very serviceable lot. We sell a great deal of this lot every year. Because it contains a little crop seed and is a little off color it can be priced to give you a very substantial saving, especially under the World Brand price. While its looks are not so nice, with Gro-Coat processing you have every insurance possible for it to give you satisfactory results and it's a real value at prevailing prices. See Item No. 32 on price list.

We Unconditionally Guarantee
Our Gro-Coated Clover Seed to Produce
Better Stands than Any Other Seed—See Page 2-3

MAMMOTH RED

All Guaranteed
See Pages 2 & 3

The Heaviest Yielding of All Red Clovers

Mammoth Red Clover seed has for years sold at a premium price over Medium. This year it so happens that weather favored the production of Mammoth and there is a proportionately larger supply. That is why this year the price of Mammoth is even a little lower. You have here an opportunity to buy the very finest of seed at a very low cost. Our seed is GRO-COATED brand to give you extra assurance of getting fine stands.

Mammoth matures its seed crop somewhat later than the first cutting of Medium. Most all its blooms form at that time. It does not, as a rule, bloom the second time like Medium. The growth of Mammoth is taller and heavier. Its one big hay crop is extra large. The second growth makes wonderful pasture and is great for plowing under. There usually is not a second hay crop. This Mammoth Clover fits into some farming plans better than Medium. Many like it better in pasture combination because it is longer lived. We recommend Mammoth as a fine crop to use for plowing under to build up the soil. You can afford to use it liberally at present prices.

World Brand

This is top quality Mammoth. The finest hardy northern grown seed. Beautiful color. High purity and germination. See Item 41 on Price List for big money-saving prices.

If needing a special mixture of Mammoth and Sweet Clover for plowing under, write us for samples and prices advising what you want. See also page 35.

Universal Brand

A very serviceable and dependable quality of Mammoth. May contain a trace of crop but is capable of producing excellent results on your farm. See Item No. 40 on Price List.

LOT
BIG BOY

Mammoth Red 99 1/4% Pure Including 4% Crop

This is another example of superior value giving. Seed that for all practical purposes is the equal of World Brand grade. Berries are just as bright and clean and high germinating. You will note from our price list it is much lower in price. How come? It has some crop seed in it. While it is 99 1/4% pure clover seed 4% is of other clovers which makes it around 95% Mammoth. That's why we can secure it to sell at such a sharply reduced price.

The percent of other clovers is so small that it offers no practical objections to most farmers. There may be some Alfalfa and Sweet Clover but the percentage doesn't average over 4. This makes a great crop for soil building. Makes one heavy cutting of hay. Excellent in pasture mixtures. Generally last a year longer than Medium Red. You got your money's worth and then some in Lot Big Boy. See Item 42 on price list.

ALSIKE CLOVER

THE CLOVER THAT GROWS UNDER UNFAVORABLE CONDITIONS

All Guaranteed to Produce
Better Stands
Page 2

UNIVERSAL BRAND

This is a very good second quality. The World Brand described in the opposite column represents the very finest. Our Universal is very serviceable seed. Not quite so bright in color. Overall test is a little lower. You don't have to sow any more seed per acre.

Alsike alone is a good Clover especially on land well supplied with moisture. It is a very fine Clover to use in mixed seedings. Splendid for pastures. You can sow it in mixtures or top seed Alsike on old pastures or meadows in the spring. Seeds are small and work into ground readily. Two or three pounds per acre are plenty for such a seeding. You can materially increase the

ITEM
No. 52
ON
PRICE LIST

production and feeding value of pastures or hay with a good percentage of Alsike present. Use Gro-Coated brand seed and get greater assurance of getting seeds stands. See Item No. 52 for price of Universal grade Alsike.

WORLD BRAND

Alsike is a Clover that is adaptable to conditions that are unfavorable for other clovers. It is a very valuable crop. Pound for pound it is higher in feeding value than Red Clover. It will grow on wetter land than Red Clover and also is not so sensitive to acid conditions. You may be passing up a crop that you are needing when you pass up Alsike. It is a fine stemmed perennial clover. It has a beautiful green color. Less dusty than Red. Under favorable conditions will grow three to five feet tall. Prefers loam or heavy land. It is an excellent practice to sow a couple of pounds of Alsike with Red Clover. It helps to secure a better stand and a thicker growth. Alsike is generally easier to get started. The seed is smaller, five to six pounds per acre are a plenty. Stands trampling well and is good for pasture and makes wonderful hay.

Finest Quality Hardy Seed

World Brand is beautiful, rich, dark green colored Alsike seed, has large berries, strong vitality, and is in our opinion the finest Alsike clover that can be had. I know you will be proud to show this great Alsike value to your friends. We guarantee you a big savings on GRO-COATED brand seed. Postpaid 1 lb., 65¢; 5 lbs., \$2.25; 10 lbs., \$4.25.

Inoculation Pays Big Dividends. See Page 31

30 Years of Savings and Satisfaction

Dear Sirs:
Berry's has been supplying me with seeds for over 30 years. I have always found them very satisfactory and also cheaper than I could get them at home. Your service has been prompt and courteous.
Very sincerely yours, M. A. Piddock.

Seed, Prices and Service Please Him

Dear Sir:
I have been buying seed from Berry's for the past 10 years. Dealing with you has always been a combination of good seed, reasonable prices and excellent service.
Respectfully, Peter Crestani.

Moravia, Iowa

LADINO GIANT WHITE DUTCH

FOR QUANTITY PRICES SEE ITEM NUMBERS 62 & 63

THE NEW 4-PURPOSE PASTURE CLOVER

This clover is largely used for pasture but it also can be put in a silo or cut as a hay crop. It has big profit possibilities as a seed producer if the season is not too wet.

Ladino is a widely adapted, easy to start, perennial clover. It is very palatable and nutritious. High in mineral and protein content. It is among the earliest legumes to start growth in the spring. Produces abundantly on upland of fair to good fertility. Will stand wetter land than Alfalfa or Red Clover. Good on loam and clay land.

It will grow two to four times as large as White Clover and six times as big as English Wild White Clover. Stems are erect, 10 to 15 inches long. Also has fleshy creeping stems that root at joints. Covers the ground thoroughly. One plant may occupy 2 or 3 square feet of space. Blossoms are as large as Red Clover. It is especially valuable mixed with other grasses like Timothy, Blue Grass, Orchard Grass and is sometimes used with Red Clover or Alfalfa in pastures.

Pennsylvania reports Ladino used as a poultry range, yielded as high as 30 to 40 tons of green feed per acre. May run as high as 30% protein on a dry basis. An 8 acre range carried 2500 to 3000 head of poultry from April until late October. On a dry basis, yield was calculated at 5.4 tons per acre. Illinois reports indicate 3 cows per acre may be pastured throughout the grazing season. Ohio tells of two cows and three calves per acre the entire season without any other feed. Iowa recommends Ladino to sow in corn fields at last cultivation.

WIDELY ADAPTED

It is being grown in most states from the Atlantic to the Pacific and south into Tennessee. Michigan says it can be used for hay, silage or pasture. Illinois says it is adapted to the entire state. A Kentucky report says it grows practically every month in the year. We recommend it for most any section and soil, unless soil is low in phosphorus. Phosphate and those elements can be readily supplied. On sand or very heavy clay we do not recommend it. The clover is shallow rooted and often does well on land underlain with hardpan. It is impossible to tell you in this limited space all the wonderful features of Ladino. We urge you to try some and see what it will do. Ask for our free descriptive circular on Ladino.

A little goes a long way, there are close to a million seed in a pound. You can top seed on thin pasture in February or early March without covering. New seeding should be made on a firm seed bed. Two pounds per acre is plenty. In mixtures one half to one pound. We offer both the Certified and Field Inspected Non-Certified seed. The quality of the Field Inspected seed is equal to the certified. Certified seed will be offered in 10, 25, and 50 lb. bags. The following prices are POSTPAID: Certified Ladino: 1 lb. 95¢; 5 lbs. \$3.75; 10 lbs. \$6.95; Field Inspected Ladino: 1 lb. 90¢; 5 lbs. \$3.50; 10 lbs. \$6.50.

Please write us if you have mislaid our Price List

Showing luxuriant growth of Ladino in an 80 acre field in southern Iowa in mid September after a hay crop had been taken earlier in summer.

BROADLEAF BIRDSFOOT TREFOIL

Inoculation Included on All Trefoil Orders

Use of this very remarkable legume is growing by leaps and bounds. It is a long-lived, deep rooted legume that will grow on poor land or rich land, on wet acres or dry ones. It is a great crop for pasture. It stands a lot of trampling and close grazing. It stands up under heat. It is grown very freely in New York State as well as in States farther South. The Iowa State Experiment Station states in one of their bulletins that their own experiment, plus reports from many farmers, indicate that it is an unusually well suited legume for permanent pastures in Iowa. What it does in Iowa, it can do anywhere in States having similar climatic conditions as well as in areas South of us. New York State has, perhaps, had even a wider experience with the Trefoil than any other State.

Do not confuse Broadleaf Birdsfoot Trefoil with ordinary Yellow Trefoil. The crops are quite different. The Birdsfoot Trefoil is one of the best types. The plants grow 18 to 36 inches long. The crop looks very much

like fine stemmed Alfalfa. It has a deep tap root with branches. The feeding value is high. Hay composition shows Protein 14.24%, Fat 2.90%, Fiber 29.60%, Calcium 1.10%, Phosphorus .28%. We had some very wonderful results with it in our experiments here at Clarinda. We had some land that we wanted to put in a row crop and sowed it to Broadleaf Trefoil. It was sown very late, along toward the first of June, and it was in bloom in August and it made a great abundance of fine stems and heavily set with leaves.

What Kind of Seed to Buy?

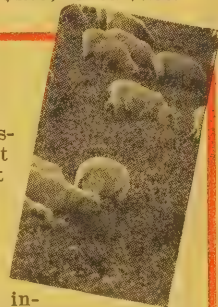

There is a domestic and imported Broadleaf Birdsfoot Trefoil. Some have jumped to the conclusion that if it's home grown it must be better. It is largely on this assumption that seed growers in an eastern state have created a demand which has enabled them to get very fancy prices for their seed. We sold it last year and could again this year, but frankly, we don't think it is worth the price. It is our sincere belief that our imported seed is superior and not inferior. We believe it will yield better and that it is probably just as winter hardy. In fact, seed dealers in this eastern state tell us that farmers in that state are taking the imported in preference to their home grown seed, so they have to peddle their high priced seed in other states.

Our aim is to supply our customers with the best of seed, but we also expect to save them money. If we did not consider our Imported Trefoil by far the best buy, we would sell you the other. We know our seed is good and well adapted to the Trefoil area.

Broadleaf Birdsfoot Trefoil is adapted to a wide range of soils. It produces seed abundantly. It sets seed even when closely grazed. After it is well established, it has a high acre production. The crop is palatable. It has a high feeding value. It is able to maintain itself in competition with sod forming grasses such as Blue Grass. It can survive severe grazing abuses. It is winter hardy. We have had no reports of bloat as yet on Birdsfoot Trefoil. It probably is because it is so fine stemmed and not sappy. Trefoil has done well with Timothy and also with some types of Brome Grass. It has been grown on some very thin land. Write for our free circular on Trefoil. It gives far more detailed information. Sow around 4 to 5 pounds of seed to the acre. See item No. 65 on price list. Small lots prepaid: 1 lb. \$1.00; 5 lbs. \$4.00; 10 lbs. \$7.50.

We urge you to grow some Trefoil this year

This crop is still new to a lot of our customers. You may have read about it but you haven't discovered its great value. It is doing such a wonderful job over such a large part of our country that we believe that it has a place on most farms. Get it started. See what it can do. We especially recommend it for use in permanent pastures. Get the advantage of increased feeding value without the bloat danger of other clovers. Grows under such a wide variety of conditions. Nearly every farm can grow it. Be sure to thoroughly inoculate your seed. In fact we recommend double the usual amount for the first seeding. We are confident you will thank us for urging you to grow some Birdsfoot Trefoil this year.

Better Than Advertised—Prices Lower

Gentlemen: Saline, Mich.
I have purchased practically all of my grass seed from you for several years. They have always been better than you advertised and at a much reduced price.
Sincerely yours, Orson E. Tobias.

Quality Shows in Field Performance

Dear Sirs: Clifton Hill, Mo.
In every instance the shipments of seed I have received from you have been satisfactory in every way. Not only the quality but also the field performance of your seed has been the best.
Yours very truly, John H. Dickerson.

BROME GRASS

★ HIGHLY PRODUCTIVE
★ EXCELLENT FEED
★ DROUGHT RESISTANT

One of the Most Valuable of All Grasses

There is a tremendous interest in Brome Grass throughout the north eastern quarter of the United States. From Kansas to the Dakotas, across the entire nation, Brome Grass is showing itself to be a very profitable crop. Practically every state experiment station has one or more bulletins or circulars telling about this great crop. They all praise its drought resistance which comes from its deep root system. Its palatability which it keeps even after plants are dry. Many give reports on the high feeding value and heavy production of Brome especially when grown with Alfalfa.

It Is a Crop That Is Widely Adapted

The Illinois Station reports Brome is adapted in that state from north to south. It has given good results in Kentucky. Iowa, Nebraska, Indiana, Minnesota, Wisconsin, Michigan are great Brome states, and a lot is grown in Canada. We consider it adapted throughout the eastern U. S. and in farther western states.

As to soils, it prefers loam land although it has given good results on sandy soils if not too low in fertility. Well drained muck land will grow Brome if they get an application of some phosphate and potash. Brome is moderately resistant to Alkali. We do not recommend it for wet land but it will stand overflow that only stays on a few days. It will also stand a lot of silting and come up through quite a heavy deposit of silt if the Brome is well started at that time. You will find it a fine grass to use in terrace outlets and grassed waterways because it has a dense spreading root system.

Other Valuable Features of Brome

It starts growing early in the spring. It yields more than most any other grass. You can graze it heavily but if you have an excess of growth, just let it stand. It will retain its palatability and feeding value and your stock will eat it later. This grass is substantially higher in protein than Timothy. It outyields Blue Grass and Orchard Grass. Brome is chiefly used for pasture but it also makes good hay. You can combine the seed crop and still have the leaf growth by setting the combine high or by stripping the seed.

Since the seed is light, it is a good plan to sow it with a bushel and a half of oats or some cracked corn to keep the seed flowing through the spouts. The seed bed should be fine and firm. Do not cover the seed too deeply, a half to three quarters of an inch is plenty. Roll it if possible after seeding. Use 20 pounds of seed to

the acre. We consider a combination of Brome Grass with Alfalfa highly desirable. Brome uses a lot of nitrogen and Alfalfa helps keep up the nitrogen content of the soil. To pasture Brome, let it get a growth of at least five inches. Commercial fertilizers generally pay big returns on Brome Grass.

LINCOLN

The Leading Strain of Southern Brome

There are three principal strains of southern Brome: Lincoln, Fisher and Achenbach. We do not know anyone who can tell any difference between them. These southern Bromes are taller growing and more vigorous for areas having climatic conditions similar to the southern two thirds of Iowa and on south of that. This Brome starts off faster and stands hotter weather than the northern or Canadian. These southern strains were developed in Nebraska and Kansas. They combine a high degree of winter raskness and the ability to stand hotter, drier weather. hardness, plus the ability to produce better hay crops in the This Lincoln Brome will produce better hay crops in the southern area and the grass is extremely palatable. Cattle really go for Brome Grass as a pasture and it also makes very good hay. For a pasture you can use up to around 40% Alfalfa, with Brome, safely without much danger of bloat. This is also true when you use commercial fertilizer. Since the Lincoln Brome is more aggressive it also uses up soil fertility faster and is more competitive to Alfalfa or other legumes that you may sow with it. It makes the application of fertilizers especially desirable where a stand is to be maintained for a considerable number of years.

Brome Grass seeds are large and light. They can carry more disease organisms than the average seed. That is why we consider it especially important to sow only Gro-Coated Brand Brome Grass seed. It takes special machinery to get this job done, but we have solved the problem and can offer you very fine quality Lincoln Brome, all Gro-Coated at extremely reasonable prices. Postpaid: 1 lb., 55c; 5 lbs., \$2.50; 10 lbs., \$4.35.

See Item No. 137 on price list

NORTHERN

Canadian No. 1 Brome

Supplies of northern Brome are quite large compared to Lincoln or southern. As we go to press the difference in price is about 7c a pound. That means around \$1.50 per acre less money to sow Canadian than southern. For many years Canadian Brome was practically the only Brome sown throughout the United States. It is still the best Brome for areas having conditions like the northern third of Iowa or north of that. Even farther south there are a number of farmers who prefer it. They like it because it is not as aggressive, therefore it does not crowd out the Alfalfa as fast when they sow a combination of Alfalfa with Brome.

This Canadian Brome will not deplete your soil fertility as fast. It has extremely high resistance to cold, as well as drought. This Canadian Brome is still extensively used in southern sections for the reasons mentioned. If you want to use Brome in combination with other grasses, we know it has its advantages because you can keep the combination that you want for a longer period.

The Canadian seed is of even finer quality this year than the southern. It is real heavy weight stock. This is the kind of seed that gives you extra assurance of satisfactory stands because it is both heavy quality and Gro-Coated Brand. There is no grass that we know of that is more nutritious or more palatable than Brome. Use it for hay and pasture. Combine it with Alfalfa or mix it with other grasses such as Orchard Grass and Fescue, especially in the southern area of adaptation. Postpaid, 1 lb. 45c; 5 lbs. \$2.00; 10 lbs. \$3.50. See Item 136 on price list for quotation.

Legume Combinations with Brome

The extremely heavy growth of Brome naturally takes plant food out of the soil. Any big producing grass or grain crop does the same thing. These crops require a lot of nitrogen. When you grow Alfalfa with Brome the Alfalfa helps to keep up the nitrogen content of the soil. This helps the Brome and also increases the protein content of the hay or pasture.

When used for hay you can make the proportion as you prefer. Many like a seeding of 10 lb. of Brome and 8 lb. of Alfalfa. You may want to add some Medium Red or Mammoth. For pasture 12 to 14 lb. of Brome and around 10 of Alfalfa is a popular choice. Trefoil is a wonderful legume in seedings made for permanent pasture. See page 27. Use some of it.

If you do not want to grow Brome in mixture we suggest the application of nitrogen fertilizer every two years. This will increase the yields of both forage and seed. Discing in the fertilizer is very satisfactory. Apply before early spring growth starts.

GRIMM

NORTHERN Grown ALFALFA

WORLD BRAND GRIMM

CORN BELT GRIMM

Grimm type Alfalfa has long been highly regarded for its winter hardiness and consistently fine performance. It normally produces a somewhat finer stem and leaf than the common types. Our Corn Belt Grimm is produced largely in Utah and Washington—it contains absolutely no southern seed.

In state yield trials Utah Alfalfa has been observed to be equal or superior to many of the northern origins and we consider it well adapted to any of the midwestern states. In our own observations we believe that the Corn Belt Grimm produces bigger yields than Northern when stands are equal. This may be due to some natural hybridization that has taken place through the years. This Alfalfa has by natural selection become adapted to the Central corn belt region and is recommended for it. In our World Brand quality you get the finest quality available. It is very similar in appearance to our W. B. Ranger P. 23 a sample of which is enclosed with this book. Our Gro-Coated Brand seed is all guaranteed, see page 2. See Item No. 15 on price list.

NORTHERN GRIMM

Our World Brand Northern Grimm is produced in the states of South and North Dakota, Oregon, Wyoming, Montana, Idaho and Nebraska. For areas requiring extremely hardy alfalfa we would not hesitate to recommend the northern origin Grimm. If you prefer alfalfa for a longer rotation program than two or three years we would recommend disease-resistant Ranger—See page 23.

Price and quality considered we don't believe you can duplicate this value. In addition to superior quality you get the added protection from our Famous GRO-COATED Brand seed. Remember no other mail order seed house can offer Gro-Coated Brand seed. Years of research and field trials have proven beyond doubt that Gro-Coated Brand seed will produce better stands under equal conditions. We are so firmly convinced of ITS superiority that we are guaranteeing better stands with our seed than with any other of similar origin regardless of price. See our guarantee on page 2. For our NEW LOW price on World Brand Northern Grimm Alfalfa see Item 19 on the price list.

Our Alfalfa Seed Is GRO-COATED Brand and Is Guaranteed to Give You Better Stands than Any Other Seed or Any Extra Cost Will Be Refunded. See Guarantee on Page 2 of This Book

COSSACK ALFALFA

WORLD BRAND NORTHERN

Cossack Alfalfa is noted for its winter hardiness and fine growth. Many consider that it excels Grimm in stamina and vigor. While Cossack in itself is not considered wilt resistant it was one of the varieties used in producing Ranger. That no doubt is where Ranger gets most of its winter-hardy character. It makes a fine leafy growth. It is a splendid variety to use in combinations with other grasses and legumes for hay and pastures.

If you want to maintain the stand for several years the Cossack is a good selection, excepting in the areas where bacterial wilt is present. In that event use Ranger. See page 23.

Our Cossack is all Northern grown and all strictly World Brand quality. Like all of our Alfalfa seed it's Gro-Coated Brand. That means it's guaranteed. There is no seed that can give you greater assurance of satisfactory results. That's where it counts, out there in your fields. Cossack Alfalfa again is in more limited supply than other types so we ask you to order early. That avoids disappointment. See Item 20 on our price list. Postpaid price pointment. 1 lb. 75c; 5 lbs. \$2.75; 10 lbs. \$5.25. any lot on this page.

Lot Bed Rock GRIMM

Our Lowest Priced Grimm

This is a very serviceable lot of northern origin seed. It comes from the same areas producing our World Brand and Lot Bonafide northern Grimm. This lot contains smaller berries, and there are more off-colored seeds. The germination per hundred seeds is lower. However, there are many more seeds in a pound. You sow seed by weight or measure and not by count. A pound or quart of Bed-Rock will contain many more seeds than the World Brand. Therefore even though the germination per hundred seeds tests lower, pound for pound it shows up very favorably. In fact, we have had some tests where we got more sprouts per ounce from Bed Rock than from the higher priced grades. When you consider the fact that it's around \$12.00 per hundred or more lower in price, you can appreciate what a wonderful value it is. Fifteen pounds per acre would be an ample seeding. It has the same Gro-Coat protection as all of our Alfalfas and that really makes a great difference under many conditions. We have sold this kind of seed for years and many customers have told us they got better results from this than any other seed so you can depend upon getting your money's worth, and then some when you buy Lot Bed Rock Grimm. See Item No. 17.

Brome and Alfalfa Make Big Yields

Dear Sir:
I have always been very well satisfied with your seeds. This year I harvested 30 tons of alfalfa and Brome grass off of 7 acres. Your prompt service has been greatly appreciated.

Sincerely,
Merle L. Schrader.

Gentlemen:
For many years my Father purchased from your Company, all of the seed used on his farm. He was so well pleased with your service and the price that he recommended I continue buying from you after I took over the operation of the farm. I have found that your seed is as good or better than advertised in your catalog.
Very truly yours,
Stanley F. Scheering.

CORN BELT ALFALFA

How to Start Alfalfa

Alfalfa prefers a well drained sweet soil. If a test shows it to be acid we recommend liming as far in advance of seeding as possible. Seedings may be made either in the spring or in the fall. Prepare a good seed bed, but do not sow on a loose seed bed. It is best to have it fine on top, well settled underneath. Do not cover over half inch deep. If possible roll it. Rolling oftentimes makes the difference between success and failure in getting a stand. You could use a light nurse crop in the spring but avoid a heavy one. In using Gro-Coated Brand seed inoculate just prior to seeding. Sow 12 to 15 pounds per acre. Write us if you have any special questions about growing Alfalfa.

WORLD BRAND CORN BELT

Whatever kind of seed you may buy from Berrys when you specify World Brand grade you get the best. There is nothing nicer to be had. We guarantee this quality to please the most critical and exacting buyer. Seed that has beautiful golden color. Big, bold berries. High germination. Seed that is thoroughly recleaned. Tests about 99.50% purity, 90% or better germination and free of noxious weeds.

In Corn-Belt Alfalfa we give you a combination of origins selected for hardiness and a maximum production of fine quality seed. We consider it suitable for all the corn-belt excepting perhaps the northern portion where the Grimm might be more desirable. It is seed of central and northern origin. There is no southern seed used in Corn-Belt Alfalfa including Honest John. This type of Alfalfa recovers more quickly after cutting than some of the extreme northern origins. It generally produces a larger tonnage and sometimes an extra cutting.

This is a wonderful year in which to put in an increased acreage of Alfalfa because seed supplies are more plentiful, prices are lower. See Item 14 on price list.

HONEST JOHN

**Lowest Priced, Hardy Origin Alfalfa—
Contains No Southern Seed**

Honest John Alfalfa has thousands of enthusiastic boosters among our customers. They will all be happy to know that Honest John now contains no southern seed but is of the same hardy origin that has given such wonderful satisfaction in the past. It isn't fancy looking seed but it sure can produce stands. We have customers tell us that they got better stands from Honest John than their neighbors did from seed costing almost twice as much. The secret of its success lies in the fact that it has smaller berries than the average lot. There are more seeds per pound. The germination per hundred seeds is lower, but the number of sprouts per pound generally is just as high, sometimes higher, than in the most expensive seed. We consider 15 pounds per acre a good seeding and one capable of producing good results. It is seed that has pleased thousands of farmers. Many call for it specifically by name because of what it has done for them in the past or what they have seen it do on other farms. We consider it adapted throughout the entire Corn Belt areas, through all areas excepting those requiring extra hardy Grimm, described on page 29. It's Gro-Coated of course. See Item 11 on price list for quotations.

RHIZOMA Alfalfa

A new variety that spreads from underground roots. Developed at the University of British Columbia, Canada. Extremely hardy and shows remarkable resistance to drought. Main area of adaptation seems to be in the northern states. Seed supplies very scarce. Order now for a start of Rhizoma. Postpaid prices: 1 lb., \$1.50; 5 lbs., \$7.00; 10 lbs., \$13.50. Not postpaid: 30 lbs., \$29.50; 60 lbs., \$58.00.

**Our Alfalfa Seed is Gro-Coated Brand
It's Guaranteed, See Pages 2 and 3**

LOT WESTERN

Lot Western is Alfalfa seed that has been produced in the southwestern part of the United States. It lacks winter hardiness under the average Corn-Belt conditions yet it is used rather widely for a green manure crop. Some of our customers report that they get a good hay yield off of it the first year. We have had reports where it has been maintained for several years. Where Sweet Clover weevil had caused that crop to be dropped in some areas the Lot Western would make a very fine seeding for soil building purposes. We carry this Lot Western in the World Brand quality. That means an extra fancy grade, as nice as you can possibly buy. See Item 4 on our price list for a real outstanding value in seed of this character.

Likes Berry's Seeds Best of All

Dear Sir:
I have been using your seed for a long time and have been well pleased with it. I will continue using Berry's Seed as I like it better than any I have ever used.
Suttons Bay, Mich.
Yours truly, Leo Schaub.

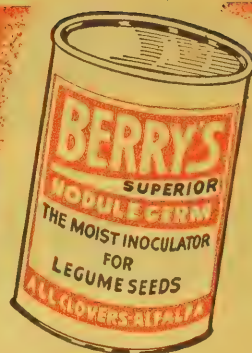

Cleanest and Least Expensive Seeds

Dear Sirs:
I find your seeds the cleanest and least expensive of any I have ever bought. We've had excellent results. I also like the promptness of shipment.
Sincerely, James E. McVoy.
La Fayette, New York

Berry's Nodule Germ

The GUARANTEED Inoculant

What is Inoculation?

Strong healthy vigorous legume plants will have little lumps or nodules on the roots as shown in the four pictures below. These nodules are full of a certain kind of bacteria. It is only when they are present that a plant can take nitrogen out of the air for its own growth. If you look closely you will see that on different crops these nodules take different shapes. The bacteria in them are different. All soils do not contain all kinds of these bacteria. In Berry's Nodule Germ these live bacteria are taken from these healthy roots, bred in a laboratory, packed in a special soil. You put it on your seed. That's the way you get the bacteria into your soil.

Why it is so important

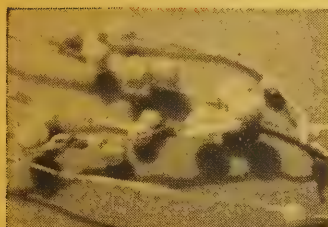

Legume plants include all clovers, alfalfas, peas, beans, vetches, lespedeza, etc. We generally look upon them as soil building plants. They are supposed to put nitrogen in the soil. They can and will if, and only if, they have certain kinds of bacteria growing on their roots as explained in the opposite column. These plants use a lot of nitrogen themselves. That is why mother nature gave them the power to take free nitrogen from the air. Remember this—If these plants do not have these bacteria on their roots they will use what nitrogen they can find in the soil and then they will turn yellow, get sick and probably die. You can make sure they have the right kind of bacteria if you will put Berry's Nodule Germ on your seed.

Our Guarantee

We guarantee that Berry's Nodule Germ will make nodules on the roots of your legume plants if you apply the material according to simple directions given below. If it doesn't make the nodules on growing plants we will refund the price you paid for it.

How Berry's Nodule Germ Works in the Roots of Legume Plants

Pictures show the nodules on roots which give the plant nitrogen gathering power

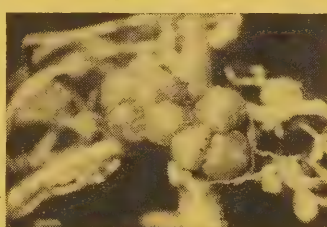

BIRDSFOOT TREFOIL

Notice that these nodules are practically round and scattered up and down the roots.

SOYBEANS

Soybean nodules generally are quite large, and liberally formed on main and side roots.

LESPEDEZA

Note how the nodules are bunched and crowded. All of the four plants shown here contain different strains of bacteria.

RED CLOVER

These nodules like those on alfalfa are generally more pear shaped. We can combine Red Clover and Alfalfa bacteria but not the others.

The Effect of Inoculation on Plant Growth

A properly inoculated legume growing on favorable soil manufactures its own nitrogen fertilizer by taking it out of the air. The effect is about the same as if you had applied commercial nitrogen fertilizer. The plants grow faster and taller. They have a darker green color. The yield may be 3 to 4 times as much as from not inoculated seed. The pictures here shown give you an idea of what the difference can be. In fact sometimes you can have a failure just because the proper bacteria were not in your soil.

Easy to Apply—Low in Cost—Enormous Benefits.

We are sometimes asked whether Gro-Coat treatment is the same as inoculation. No it is not. You should inoculate Gro-Coated legume seed. Apply the nodule Germ by sprinkling it dry, just as it comes out of the can. Stir it so as to get some dust on every seed if possible. Sow seed within three hours after applying it. If you are delayed in seeding after inoculating it in, recommend re-inoculating when you do sow.

Prices on Berrys Guaranteed Nodule Germ

We have a combination Inoculant for Alfalfa and Red Clover, which also inoculates alsike, Ladino and Crimson Clover. Others need special inoculants as priced. Alfalfa and Clover 1 bu. 55c; 2½ bu. size \$1.10. Birdfoot Trefoil ½ bu. 35c; 1 bu. 65c. Lespedeza and Vetch, 100 lbs. size 55c. Soybeans, 2 bu. 40c; 5 bu. 60c; 25 bu. \$2.70. Field and Garden Peas, 1 bu. 30c.

"NITRAGIN" Prices. Another nationally known Inoculant. Alfalfa—Clovers 1 bu. 55c; 2 bu. 95c. Peas and Vetches 100 lb. size 50c. Lespedeza 100 lbs. 55c. Soy Beans, 2 bu. 40c; 5 bu. 60c; 25 bu. \$2.70.

Red Clover Growth

The above shows difference in production in red clover from the same number of seeds. Part inoculated, part not. Note the difference in alfalfa on the right side of page.

ALFALFA

Three Dependable Seed Sowers—You Save on Seed & Get Better Stands

Cyclone Seeders

This has been a great favorite with farmers for 80 years. It accurately distributes all smooth grass seed, clovers, grain as well as pellet and granular fertilizer. Has an exclusive double oscillating Feed and Instant Control. Prevents waste of seed. Can be used anytime any place a man can walk. Built for many years of service. Capacity ½ bu. Postpaid price \$4.30.

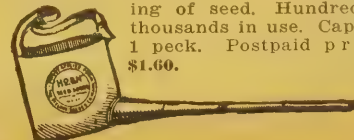

A Heavy Duty Seed Sower

Zincrip, rustproof steel is used in all main parts. Body is one piece drawn steel. No seams. No welds. No wood to split or warp. Gears sealed in a dust-proof chamber and permanently lubricated. Gears are accurately machined, easy to operate. Shutter adjustment is easy and accurate. An unusually strong and sturdy machine. Capacity 18 quarts. Postpaid price, \$5.95.

Horn Seeders

The simplest of all seeders. No gears or moving parts. Seed flows into spout which the sower swings back and forth as he walks. Rate of seeding can be accurately adjusted by changing the size of the spout opening. Speed of swinging spout also regulates spreading of seed. Hundreds of thousands in use. Capacity 1 peck. Postpaid price, \$1.60.

IT WILL PAY YOU TO DRIVE 100 MILES AND MORE TO VISIT ONE OF OUR STORES

See Bottom Next Page for Further Information and Locations of Our 12 Modern Retail Stores

How to Choose Crops to Fit Your Needs

On the previous page we give you two basic pasture seedings and explain how they may be changed to fit your own particular soil conditions. We know that you sometimes want something different. Therefore we are listing below various grasses and clovers that can be used for different purposes. You will find opposite each a figure showing the number of pounds per acre that we recommend sowing if you sow it without any mixing.

This will make it easy for you to figure how to make up any special mixture you want. For example, we suggest Brome alone 20 pounds per acre. Alfalfa 12 to 15. Red Clover 7 to 8. Then if you should decide you want a mixture half Brome and a fourth each of Red Clover and Alfalfa, you would get 10 pounds of Brome, 3 to 4 of Alfalfa and 2 of Red Clover.

We cannot prepare special mixtures for you. That would require special analysis tags and many small mixers. It is a simple matter for you to make mixtures after the seed comes to hand. Otherwise you can order the regular ready mixed seedings described in this catalog.

For Permanent Pastures

Brome Grass, 20 lbs. per acre; Fescue Alta-Ky. 31 or 144, 15-18; Timothy, 8-10; Orchard Grass, 20; Ky. Blue Grass, 18-20; White Dutch Clover, 2; Ladino Clover, 2; Birdsfoot Trefoil, 12-15; Alsike Clover, 4-6; Meadow Fescue, 15-18; Reed Canary Grass, 7-8; Meadow Foxtail, 12; Sericea Lespedeza, 12 lbs.

Permanent Meadows

Brome Grass, Southern or Canadian, 20 lbs.; Alfalfa, 12-15; Fescues, Alta, Ky. 31 or 144, 15-18; Timothy, 8-10; Orchard Grass, 20; Alsike Clover, 4-6; Ladino Clover, 2; Reed Canary Grass, 8; Meadow Foxtail, 12.

Short Rotation Pastures

Rye Grass Domestic or Perennial, 20 lbs. per acre; Timothy, 8-10; Red Clover, 7-8; Mammoth Clover, 7-8; Alsike Clover, 4-6; Red Top, 7-10; Orchard Grass, 20; Alfalfa, 12-15; Korean Lespedeza, 12; Meadow Fescue, 15-18. Oftentimes farmers prefer more clovers in short rotation pastures.

Short Rotation Meadow

Red clover, 8-10 lbs.; Mammoth Clover, 8-10; Southern Alfalfa, 12-15; Korean Lespedeza, 12; Timothy, 8-10; Alsike, 4-6; Meadow Fescue, 15-18; Domestic or Perennial Rye Grass, 20.

Quick Growing

For this, quick growing crops are wanted. Some of them can be sown early. Sudan and Cane after corn planting time. Sudan, either Sweet or Common, 25; Hubam Clover, 12-15; Dwarf Essex Rape, 8; Oats, 3 bu.; Winter Rye, 1½ bu.; Wheat, 1½ bu.; Vetch, 15-20; Rye Grasses, 20; Cane, 40.

Annual Hay Crop

Sudan, Sweet or Piper, 25 lbs.; Billion Dollar Grass, 25; Hubam, 12-15; Oats, 3 bu.; Millets, 25; Soybeans, 1½ bu.; Fields Peas, 1½ bu.

Grasses and Clovers for Different Kinds of Land

Wet Land

Reeds Canary, 8 lbs.; Fescues, Alta. Ky. 31 or 144, 15-18; Meadow Foxtail, 12; Red Top, 7-10; Ladino, 2-4; Alsike, 6.

Dry Land

Crested Wheat, 10 lbs.; Alfalfas, 12-15; Trefoil, 5-8; Fescues, 15-18; Sericea, 12; Sweet Clover, 12-15; Brome, 20.

Sandy Soil

Vetches, 18-20 lbs.; Crested Wheat Grass, 10-12; Sorghums—Drilled, 50; Double Rows, 15-20; Single Rows, 8-12; Sweet Clovers, 12-15; Alfalfa, 12-15; Brome, 20; Rye, 1½ bu.

Well-Drained

Red Clovers, 6-8; Mammoth Clover, 6-8; Alfalfa, 12-15; Sweet Clovers, 12-15; Hubam, 12-15; Timothy, 8-10; Orchard Grass, 20; Brome, 20; Ladino, 2; Birdsfoot Trefoil, 5-8; Rye Grass, 20; Fescues, 15-18; Lespedeza, 12.

Average Fertility

Alfalfa, 12-15 lbs.; Red Clover, 6-8; Mammoth Clover, 6-8; Sweet Clovers, 12-15; Hubam, 12-15; Timothy, 8-10; Orchard, 20; Fescues, 15-18; Birdsfoot Trefoil, 5-8; Ladino, 2-4; Lespedeza, 12.

Poor Land

Fescues, Alta, Ky. 31, 144, 15-18 lbs.; Birdsfoot Trefoil, 5-8; Sericea, 12; Sweet Clover, 15; Timothy, 8-10; Orchard Grass, 20; Korean Lespedeza, 12; Red Top, 7-10.

Rich Land

Brome, 20 lbs.; Timothy, 8-10; Orchard, 20; Red Clover, 6-8; Mammoth Clover, 6-8; Ladino, 2; Sweet Clover, 12-15; Alfalfas, 12-15; Fescues, 15-18; Rye Grass, 20; Birdsfoot Trefoil, 5-8.

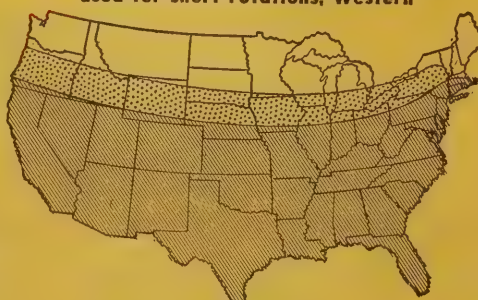

ALFALFA FOR DIFFERENT AREAS

Ranger, Grimm and Other Northern

The upper area is where the above mentioned Alfalfas do exceptionally well but they may also be grown farther south including the white area on the map.

Buffalo, Corn-Belt, Kansas, Okla. and when used for short rotations, Western

The Alfalfas mentioned above are well adapted up to the northern edge of primary area but can go farther north into the secondary area also.

Seeds Satisfy—Saves Money

Dear Sirs:

I am perfectly satisfied with your seeds in every way. Also, your low prices saves me money.

Portland, Mich.

Yours truly,
C. W. Knoll

Consistent Values—Prompt Shipment

Dear Sirs:

I seeded 10 acres of oats this year with your Northern Grown Alfalfa seed. I never had a finer catch of alfalfa, and that is quite some satisfaction. I like your promptness in shipments and your consistent values.

Yours truly, Homer F. Kunkle

Homer City, Pa.

ORDERING IS EASY, SAFE and ECONOMICAL

GUARANTEE

We guarantee to save you money, considering quality. If upon receipt of your order you are not entirely satisfied you can return it and your money, plus transportation charges, will be promptly refunded. Or you can keep it 60 days and have the seed tested in order to satisfy yourself that the quality is good and that you have saved money and secured a big bargain. Then if you are not pleased you can return it, and have all money, including freight paid, refunded. You must be satisfied and we guarantee to save you money.

For garden seed guarantee see page 48—nursery stock page 55.

BERRY SEED CO., Clarinda, Iowa

CATALOG PRICES

Save our pink price list. By issuing a separate price list we can give the benefit of latest markets. Be sure to have the price list enclosed with this book. If it gets mislaid or out-dated, drop us a card and we will send you another copy at once.

We urge you to buy as early as you can from the price list that comes with the catalog. Because of market fluctuations prices are subject to change as indicated on the price list itself.

BANK REFERENCES

Our Company has a Capital surplus in excess of \$3,000,000.00. You can check our financial responsibility further through Commerce Trust Company at Kansas City, Mo.; Omaha National Bank, Omaha, Neb.; First National Bank, Chicago, Ill.; Iowa Des Moines National Bank, Des Moines, Iowa; Bank of the Manhattan Company, New York, N. Y.; First National Bank, Lincoln, Neb.; and the Drovers National Bank, Chicago, Ill., or any other bank or Commercial reference.

You Can Save Money at Berry's

We sell direct to farmers. Our prices are generally on a wholesale basis. You have a very wide selection of seeds in this book. When you buy seeds you want results in the field. Through our Gro-Coated Brand seed we give you a **GUARANTEE of Better Stands**. All these things combined make it greatly to your interest to buy your seed requirements from Berrys. The savings are big and they are genuine considering quality.

Fast, Efficient Service

We are organized to give you better service than ever before. There is one special department whose duty it is to see that shipments go out with all possible dispatch. The American Field Seed of Chicago has now been consolidated with us all for the purpose of giving greater values. See the paragraph below relative to eastern shipments. We will try to take care of late buyers promptly but for your own interests mail order early. Try to avoid that last minute rush.

Is There Any Advantage in Ordering Early?

By ordering early you have a wider selection to choose from. You have better assurance of getting exactly what you want. You almost invariably get lower prices because we make our early prices the lowest. You are also assured of having the seed on hand in plenty of time for your spring seeding.

How to Order

By studying this Catalog you can get a very good idea as to what the crop may do for you. If you are in doubt write to our Service Department for expert advice. If possible, use our regular order blank when you order, if lost, any other paper will do. Give your full name and complete address, tell what station you want the seed shipped, and how you want it shipped. Freight or truck is most economical. Express or parcel post is quicker, but much more expensive. If you are in doubt how you want it shipped, you can leave it to our judgment. If your freight station is different from the post office, be sure to indicate it. If there is no agent at your freight station, we will prepay the freight and send you notice as to the amount due.

If you want the seed shipped by truck, try to give the name of your truck line and find out if they have a truck depot at

your station. Many truck lines serve small towns that have no depots. In such case you should give the name of some storekeeper or local dealer to whom the seed could be delivered. It will then be shipped to you in care of such place of business.

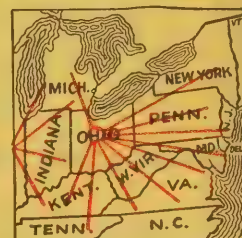

Sometimes some lots of seed become sold out and unless you mark your order "No Substitution" we will send the nearest thing to it, and either refund the difference in price, or bill you for the balance, or notify you as to the change in price.

Please send remittance with order. That gives you better service. Use postal or express money order, bank draft or personal check. Do not send stamps or coin, if convenient to remit otherwise. **Please specify item number.**

Eastern Shipments

In order to save our eastern customers money and to give good service to American Field Seed customers we have complete stocks for shipment from Marion, Ohio, and Streator, Illinois, warehouses. You will note from our price list that prices F.O.B. these points are slightly higher. However, the saving in transportation and quicker service much more than offsets this small difference. If you live in the area shown on the map to the right it would be to your interest to remit Ohio or Illinois prices, otherwise remit Clarinda prices. **Do not write to any other address but Clarinda.** If you wish your order shipped from the eastern points, just state on your order, and remit the corresponding price. We will ship from the point that will give you the best service and the lowest cost.

Parcel Post Rates

Any order for seeds can be sent Parcel Post. Use the map above to find your zone and figure the rates below in remitting for any seeds ordered shipped by Parcel Post not quoted postpaid.

	1st lb., costs	All Additional pounds
Zone 1	23c	4c
Zone 2	23c	4c
Zone 3	23c	5c
Zone 4	24c	7c
Zone 5	26c	9c
Zone 6	28c	12c

These postal rates are in effect as this catalog goes to press. Should rates increase, we will bill you for any additional amount due. We can ship Express charges collect if preferred. Order early though, so we can ship freight which is cheapest, particularly on Seed Grains such as Oats that take a special rate. Above rates subject to any change in postal regulations.

12 MODERN RETAIL STORES

We have been able to establish retail stores at a few points as listed below. These stores carry most of the items that are listed in our catalog and there are many other items besides in allied lines that you will find in these stores, including, as a rule, a complete line of feeds. We find customers driving up to 150 miles to visit these stores. They like to discuss things with our Managers, to see the entire seed line. We cordially invite you to drive to your nearest store. **Prices at these stores will be slightly higher as it costs a little more to establish this service. This is customary among all mail order houses.**

However, if there is no store near you or it is not convenient to drive to one of them, be sure to order by mail. We can still give you the same superlative service and values that have made Berry Seed Company and American Field Seed Company such outstanding concerns in the nation for the past many years. We expect to continue to give you service along those lines for many years to come. Whether you visit us or write us you can be sure of getting satisfaction on all your seed purchases.

We have five Ohio stores: Marion, 420 North Main Street; Findlay, 1711 Lima Avenue; Van Wert, West on Highway #30; Greenville, 107-111 West Main; Washington C. H., C.C.C. Hiway, West City Limits. Five in Illinois: Streator, 904 East Kent Street; Kankakee, Route 54, North City Limits; Galesburg, 1153 Grand Avenue on Hiway 150 & 97; Danville, 2801 North Vermillion Street on Hiway #1; Chicago, 1929 West 43rd; and two in Iowa: Boone, East on Hiway #30, and Clarinda, 9th and Garfield.

A Complete Line of GRO-COATED Brand Farm Seed in Every Berry Store.

SWEET Clover

THE Great SOIL BUILDING Crop
RESTORES FERTILITY TO POOR LAND
Makes Good Land Better

Sweet Clover is an outstanding soil improving crop. It is unexcelled for putting nitrogen into the soil as well as other elements of plant food that are made available when the crop decays. A crop of sweet clover plowed under in the spring will increase corn yields as much as 20 bushel to the acre. There are some who will let the crop grow until it is in the full bloom stage. Somewhat higher fertility is returned in that way. When you follow that practice, however, it becomes too late to put the land to corn that year. If you plow it under early in the spring when it is six to eight inches high you can generally still put the land to corn and get wonderful results. We could give you results of many experiments on the fertility of sweet clover. Its effect on corn yields will illustrate what it can do for you. It has very strong tap roots that go down deep. The tap roots will break up heavy soils and permit better drainage. Sometimes they will break up hardpan. They decay quickly when plowed under. We do not recommend plowing the same year it is sown unless you use Hubam, described on page 36.

The first year Sweet Clover will afford pasture from the latter part of July until in October. In the spring you can get pasture from April to along in July with Yellow and from May until August with White. That is why a good many like to mix White and Yellow to prolong the pasture period. It is good for hog pasture if you keep it held down to a height of around 15 inches. It has a tremendous carrying capacity as a pasture. All our Sweet Clover seed is Gro-Coated Brand. A customer in Nebraska reported plants from this seed grew so fast it got ahead of the Sweet Clover weevil, whereas other seedings in his area were lost. We make no such claim, but this man was positive Gro-Coated Brand seed made the difference.

Inoculate All Sweet Clover Seed
1 bu. size only 55c; 2 1/2 bu. \$1.10

Grades and Varieties

We handle Sweet Clover in about the same grades as the other clovers namely Planet, Fancy and World Brand. These grades are described on page 33 and on these pages. That which we list in our catalog as Sweet Clover is the White Blossom, unless otherwise specified. Because of conditions in the principal seed producing sections, it may contain some Yellow. The Yellow Blossom lives two years and matures about ten days earlier than White. It is finer stemmed and somewhat leafier. Hubam, also known as the Seven Wonder Clover, an annual variety, makes its full growth in one year, see page 36.

We also call your special attention to the combination seeding of Sweet Clover and Mammoth Red described on page 35. It's a great value.

Better Stands Guaranteed

See pages 2 and 3 of this book for full explanation of our guarantee of better stands. Never before has such a guarantee been made. Not only better stands, but faster growth is reported by many farmers. One party in Nebraska stated that the stand from Gro-Coated brand Sweet Clover was the only one that survived the Sweet Clover weevil attack. He said it grew so fast it simply survived the weevils which generally attack only the small plants. We do not make this claim for it, but that is a bonafide report. We have thousands of farmers' reports that speak of faster growth, more plants and bigger yields. Profit by sowing this guaranteed seed.

Descriptions Reliable—Quality High

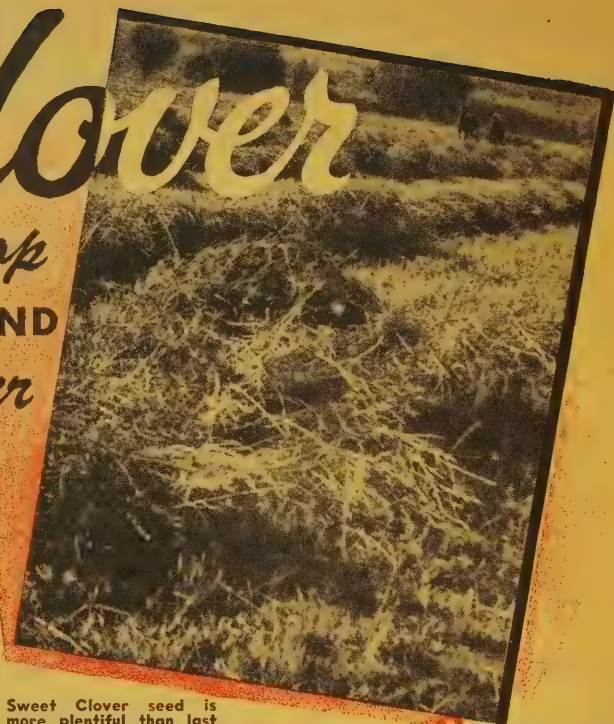

Dear Sir: Rochester, N. Y.
 I have been using your seeds for many years and have had very satisfactory results. Your catalog descriptions are very reliable, as I have always received high quality seeds at a reasonable price.

Sincerely yours,
 Dominick Branchi.

Good Results—Fine Stands

Gentlemen: Lester Prairie, Minn.
 We have been buying seed from you for several years and have always had very good results. Some of the seed we sowed this spring gave us the best stand we ever had.

Yours truly,
 John C. Pokornoski.

Sweet Clover seed is more plentiful than last year and considerably lower in price. You can afford to sow it more liberally. Do not however delay buying. We expect markets to advance and some lots will be sold out.

WORLD Brand YELLOW

Our Very Finest Quality

This biennial or two year yellow blooming sweet clover is liked by many for the reason that it is finer stemmed, and that it does not grow quite as tall. It also seems to tolerate more adverse conditions such as drought and closer grazing or cutting. It will make about as large a growth the first year as the white, 12 to 24 inches, depending upon soil and seasonal conditions. The second year it may not produce quite as much because it matures somewhat earlier. This is oftentimes the feature which is greatly desired. It is also quite a common practice to mix white and yellow, so as to lengthen the pasture season, and also to lengthen the bloom season in event you want to use it for bee pasture purposes. If you demand the very best in quality you will find it in our World Brand grade. The seed is thoroughly scarified, and the shipment is absolutely guaranteed to please you. Write for special quantity or delivered prices.

 ON
 PRICE LIST

Sweet Clover Is Cheap This Year. Sow Plenty of It

FANCY Brand YELLOW

This Fancy Grade runs our World Brand quite a close second. We can sell it at quite a bit more attractive figure, because it contains a few off colored seeds, but aside from that you will find it a very dependable, satisfactory seeding. You can make an extra saving in buying this lot.

The fact that Sweet Clover is largely used for pasture purposes, makes Yellow very desirable especially where you want as much pasture as you can get the first year. It does not seem to winter kill as easily even if it is pastured relatively close, or if cut back fairly far for hay crop the first year. If you can let it go into the winter with a top growth of around 5 inches, that should be sufficient. That will not reduce the production next year as much as if the white were cut or pastured that close. From a soil building standpoint we consider that it is very similar to the white. In fact, we think it starts off a little faster in the second year. Some customers say they think it is easier to get a stand of yellow and that it will do well under less favorable conditions. Sow White or Yellow, use around 12 to 15 pounds to the acre. 1 lb. of any Sweet Clover Postpaid, 50c; 5 lbs., \$1.75 and 10 lbs., \$3.15.

Sweet Clover PRODUCES Enormous Crops

A Great Clover for Pasture

Sweet Clover has an unusually heavy carrying capacity as a pasture. It will take care of more stock per acre than any other clover. You can get this pasture the same year that you sow it. Sweet Clover when sown on winter wheat or with spring grain will grow quite fast after the grain crop has been removed. Generally you can begin pasturing it about the middle of July. You can put quite a lot of stock on it. Let the crop go into the winter with pretty good top growth. That will give the plants added strength and enable them to come through the winter in better shape. In the second year it starts growing early and grows until about mid-summer. Some make a practice of sowing sweet clover two years in succession on the same land. Thus when the second year clover is finishing its growth the new seeding is coming along to provide pasture for the balance of the season. You can maintain a pasture this way for several years.

Generally Makes Hay the First Year

While the sweet clover is used principally for soil improvement and for pasture it also will make good hay, especially the first year. It should be cut early enough in the fall so that the growth can come on to make good production before winter sets in or cut it with a fairly high stubble. The feeding value of sweet clover hay, especially the first year's crop, is very good. It should be well cured so that it does not become moldy. If you wish hay in the second year be sure to cut it with a high stubble. The second crop from sweet clover, in the second year of its growth, comes up from the stubble and not from a crown like alfalfa. If you cut sweet clover close to the ground in the second year of its growth you will generally kill it out. If it is cut for hay in the second year, cut it about the time the bloom buds begin to show up.

Berry's Prices Save You Money on All Grades

Berry's Sweet Clover prices are for GRO-COATED brand seed. See pages 2 & 3 and price list

LOT DO-MORE SWEET CLOVER

A Very Special Favorite of Thousands

This Lot stretches your money over more acres than any other lot. It is our lowest priced grade, it has the quality that has been giving our customers satisfactory results. Naturally it isn't the finest or looks but the favorable reports that we get on this indicate its real value. After all, it is results that you are after when you make a seeding. Lot Do More has been scarified, it has been re-cleaned and it is results that you are after when you make a seeding. The crop from this grade is the same kind as tested. The crop from the higher priced grades. You do not have to sow this at any heavier rate than the other grades.

This Grade is in Big Demand

Every year we sell large quantities of Lot Do More. This year the quality is improved. As mentioned above, it is not the finest looking seed, it is somewhat off-colored. The germination per 100 seeds is lower than in the larger berried grade. The berries in "Do-More" are smaller. That is why it gives such good results. The larger number of seeds per pound generally offsets the lower tests and not by counting out so many seeds per acre. It is the number of sprouts per pound that counts. The lower priced seed therefore may give you as many sprouts per ounce or per pound as the higher priced grade even though the sprouts per 100 seeds are less. Our prices on GRO-COATED brand seed are very low this year.

LOT WONDERFUL

An Extra Value in Fancy Seed

This is a beautiful lot of Fancy White Sweet Clover. It comes quite close to our World Brand in appearance and seed, the germination, and purity are all good. It is as nice a quality as some dealers sell as their very best. You will find it thoroughly dependable. Like the Do-More it is the White Sweet Clover. This lot has a little mottled yellow in it. That is apt to be true of most any of the White Sweet Clovers.

This is an Especially Low Price

Supplies of Sweet Clover this year are somewhat more plentiful than a year ago, but stocks are not large. Prices are materially lower and you can afford to sow it much more liberally. For all practical purposes this lot will do everything that the World Brand will do, and you can buy at a saving of \$2.00 per hundred. We will gladly send you a sample so that you can see how much you get for your money in this great value. You can order it with the assurance that you will be perfectly satisfied with the seed when you get it. If for any reason it fails to please you, you can return it and your money including transportation charges will be refunded. Lot Wonderful is indeed a wonderful value.

LOT SOIL BUILDER

MAMMOTH RED & SWEET CLOVER

Mammoth Red is the big, one cut Red Clover described on page 26. Up in the northern states like Minnesota and others, Mammoth Red Clover and Sweet Clover are growing together in the same fields. The tonnage that these acres can produce is tremendous. The Mammoth grows in between the Sweet Clover so it makes a dense, heavy mat of green. It well deserves its name "Soil-Builder." It does wonders for a soil when such a growth is plowed under. While hay is not as fine as Medium Red, the yields are enormous.

Because this seed is grown and harvested mixed, it can't be sold as either straight Sweet Clover or Mammoth. So we get it at a sharp discount and therefore, can offer you a matchless value in this Gro-Coated seed. See Item 43 on Price List.

Sweet Clover Grows Fast

I sowed Gro-Coated Red and Sweet Clover this year. While the Wheat was not too heavy, the Red Clover was healthy and grew vigorously. In one field this spring, I plowed it up and sowed Gro-Coated Sweet Clover alone, putting 12 pounds to the acre. Have a wonderful stand now in September; it is 5 feet tall. The plant certainly grows vigorously.

E. G. Powell, Findlay, Ohio

Withstands Dry Weather Better
I sowed Sweet Clover, some mixed seed and Korean Lespedeza, all Gro-Coated. Used good seed than normal and got good stands. I think the crops from treated seed stand the dry weather much better.

E. N. Frueh,
Dallas, Iowa

Many Years of Fair Dealing and Saving

Gentlemen:
For the past 25 or 30 years, I have been sending you my orders for seed. I have been well pleased with the seed and your fair dealings. If I could not have saved money, I would have bought seed here.
Very truly yours, G. B. Harris.

Sheridan, Ind.

Gro-Coated Alfalfa Grows Fast

Gro-Coated Alfalfa was sown with the Barley and it grew nearly as fast as the Grain. The Barley made a heavy stand. It ran 61 bu. to the acre, yet the Alfalfa was as fine a stand as could be. Since threshing, 40 head of cattle are running on it and it's still growing. I think Gro-Coated is a wonderful help in getting stands and should be expanded to all grasses.

Willard Dittrich,
Alma, Wisconsin

Gro-Coated Seed Made the Best Stand

I sowed some Gro-Coated Sweet Clover last year, using 8 pounds to the acre. That is less than I normally sow. On account of soil conditions being different in the field there was some difference in performance. There is not much stand where the seed was not Gro-Coated.

Theo. A. Coufal,
Bruno, Nebr.

Prompt Service—Satisfactory Quality

Dear Sir:
I have used Berry's Seeds for the past 8 years and they have been very satisfactory in quality and seeding cost. My orders have always been given prompt attention. You can depend on an order from me each year.
Respectfully, Elwood Stock.

Hamilton, Ohio

World Brand WHITE SWEET CLOVER

This is the cream of the crop from a quality standpoint and also varietal purity. Our World Brand quality means only the very highest standards of purity, germination, color, size of berry, etc.

In order to get enough seed that would come up to our World Brand quality requirements Berry's have bought Sweet Clover from Oklahoma all the way up into Canada and from Ohio, west into Montana. Berry's were pioneers in introducing this crop to American Agriculture, and are today probably the World's largest handlers of it. Come to seed headquarters when you want the best of anything at a price to save you money.

What do we mean by varietal purity? Most Sweet Clover today is mixed to some extent, that is, the White will contain some Yellow. In our World Brand, Berry's choose the finest seed that grows, although it isn't 100% White, and will contain some Yellow.

Our supplies of this very finest seed may be gone before the season is over. We can't replace them at any price when that happens so order early. The early buyer always gets the best of service and quality at lowest prices.

(Be sure to write us if our Pink Price List is mislaid)

LOT PREMIUM SWEET CLOVER

A Very Fine Quality at a Very Low Price

If you were to ask us to pick out the one best value in Sweet Clover in this book, we believe we would have to select this Lot Premium. It meets our customers demands for high quality at a price that means real savings on your seed bill. Lot Premium is principally White Blossom but contains a little more Yellow than the other regular grades of White. This gives you earlier pasture

than you will get from the White alone, and it lasts over a longer period. The Yellow and White are equally good for soil building purposes. From the standpoint of performance therefore, this Lot Premium will give you the same practical results that you can get from any of the other offers.

This is seed of high purity, it is hulled and scarified for quick germination. It has a good color and a nice sized berry. The reason it is cheap is because it contains little more Yellow than the average and we thus could buy it at a discount. This discount we are passing on to you in the very low price we have on it this year. Some of our lots are lower priced, some are higher priced. You get a maximum of all around sound quality in this Lot Premium. Remember it is all Gro-Coated. That makes it worth a great deal more.

Whatever grade of Sweet Clover you may select, we do urge that you order it early and assure yourself of the selection that pleases you most. Also be sure to inoculate your seed. Order 2½ bushel size unit for greatest economy. It will treat up to three bushel.

Price on Inoculation—1 bu., 55c; 2½ bu. size, \$1.10. See page 31.

Very Satisfactory Results from Berry Seeds

Dear Sirs: Northampton, Pa.
The seed which I have been buying from you for quite some time has given very satisfactory results. The stands have been very good.

Yours truly, Lester R. Becker.

HUBAM ANNUAL WHITE SWEET CLOVER

7 GREAT FEATURES

Fancy Brand

Sometimes called "7 Wonder" Sweet Clover

A GREAT MONEY MAKER—DEMAND INCREASING

More farmers each year are learning about the merits of this great crop. This sensation of the Sweet Clover family, being an annual, does two years work in one. With shorter rotations being practiced with the need for continued all out grain production, and maintenance of high soil fertility, Hubam fills today's farming practices better than ever before.

Sow Hubam with a nurse crop. It is one of our greatest pasture crops and also can be used for hay. It is easy to get a stand and will make a seed crop the first year, yielding up to 10 bushels per acre. Hubam is adapted to any soil that will raise Sweet Clover. It can be pastured until frost, being very drought resistant. For hay it yields up to 4 tons per acre, with a protein content of 20 to 25% on a dry basis.

As a soil builder Hubam is nearly equal to Sweet Clover. It won't come up the following spring when plowed under in the fall.

Seven Points of Superiority

1. Makes its full growth the same year it is sown. Cash in on hay, pasture and seed.
2. High in protein 20 to 25%. Fine feed, excellent for dehydrating and grinding for stock feed.
3. Wonderfully fine for fertilizing. Stores an abundance of nitrogen in the soil. A legume of exceptional possibility.
4. An excellent pasture crop. Produces big yields of hay, rich in feed value.
5. A good heavy producer. Blooms abundantly. It also is a fine drought resister.
6. A profitable cash crop when saved for seed. Yields up to 10 bushels per acre.
7. Helps control root rot by giving you a quicker rotation. Keeps soil healthier.

Seeding Suggestions

Inoculate your seed with Berry's Nodule Germ. See page 34. Sow on winter grain when ground can be harrowed lightly. Sow 15 lbs. per acre. Harrow lightly or roll after seeding. Rolling is best. Sow with spring grain in a similar way. Cover seed lightly with a harrow and roll.

Supplies Limited—Buy Early

Hubam is in terrific demand due to its wonderful performance. Supplies are good today but demand is heavy and markets strong.

Hubam is adapted to every state in the Union. Try it this year. The results will please you. Berry's price is guaranteed to save you money. Berry's Fancy quality is a highly serviceable grade. We didn't get enough of the extra fancy looking seed this year to offer World Brand, but this Fancy is good seed. It's Gro-Coated, of course. For a fine value in slightly lower germination order our Choice or Planet Brand Hubam Gro-Coated as described below.

Small lots Postpaid. 1 lb., 55c; 5 lbs., \$1.95; 10 lbs., \$3.65.

CHOICE HUBAM SERVICEABLE QUALITY

ITEM
No. 88
ON
PRICE LIST

We were able to secure a lot of Hubam Clover at a real sacrifice price. The seed has a nice sized berry and it has high purity. The germination is somewhat below normal, so that it should be sown at a little heavier rate. A normal seeding in most sections is 12 to 15 pounds per acre. We suggest sowing 15 pounds of this Choice Grade lot and have priced it accordingly. By having the Gro-Coat protection you have extra assurance of getting the best possible results from this seed. With Hubam in short supply this year, this is a real bargain.

All Sweet Clover is Gro-Coated Brand and it's all GUARANTEED. See page 2.

Prompt Courteous Service Is Satisfactory

Dear Sirs: Lancaster, N. Y.
I have always been very satisfied with the seed I bought from your company. I also like your prompt and courteous service.

Yours very truly, Dawn A. Brunck.

KILL INSECTS

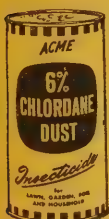

ACME GARDEN GUARD

America's favorite Rotenone dust for vegetables and flower gardens. Safe to use on edible portions of plants right up to picking time. 1 pound sifter can 50c each, 4 pound bags \$1.25 each.

ACME TOMATO DUST

Acme tomato dust is especially formulated for tomatoes, controlling blights and worms and permitting best possible harvest. 1 pound sifter cartons 60c.

ACME 6% CHLORDANE DUST

Chlordane is powerful and effective in controlling insects three ways—by contact, when eaten, or by inhalation of its vapors. Use in gardens—for cut worms, and ants. In soil—for wire worms, and white grubs. On lawns—for ants, chiggers, grubs and sod worms. In the house—for ants, cockroaches, carpet beetles, silverfish, crickets, and fleas. Use as a dust as it comes from the package. One Pound 60c.

ACME 5% LINDANE SPRAY

New super killing insecticide for fast control of aphids, thrips, plant bugs, caterpillars and most all beetles infesting Azaleas, Roses, other flowers, shrubs, vines, fruits and vegetables. 4 oz. bottle 75c, pints \$2.40.

ACME ALL ROUND SPRAY

All Round spray gives the highest degree of protection to costly flowers, fruit trees, shrubs and vegetables from ravages of insects and blight. Combining two insecticides and two fungicides. 1 pound cartons \$1.10.

ACME DUSTING SULPHUR

Controls mildews and many other fungus diseases as well as certain mite insects. Light dustings or sprayings furnish a protective coating on Roses and many other foliage plants against mildew and spot. 2 pound cartons 60c each.

ACME ALL ROUND BOMB

A self sprayer package. New Acme formulation for control of a wide variety of insects attacking flowers and plants both indoors and outside. This bomb will appeal to many because of its convenience. For use on such plants as African Violets, Begonias, Carnations, English Ivy, Grapes, Roses, Tomatoes, and many others. Each \$1.50.

ACME DIMITE

A quick, positive, long lasting contact control for mites and red spiders damaging evergreens, flowers, fruit and shade trees, shrubs, vegetables and vines. 2 oz. bottle 69c. 8 oz. \$1.89.

DUPONT ROSE DUST

Here is the answer to leaf spots, blight, and rusts that are persistent trouble to rose gardeners. Whether they have one bush or many, they will welcome this product developed by DuPont pest control laboratories for roses, snap dragons, carnations, etc. Used as a dust or spray. Prices—8 oz. gun 79c; 1 lb. sifter top can \$1.00.

ALL PRICES ON THIS PAGE POSTPAID

DUPONT FLORAL DUST

Developed to insure flower growers a safe, preventive product that would keep harmful insects and fungus diseases from ever getting a foothold in the garden. Contains four proven pest killers—Rotenone, Methoxychlor, Sulphur and Fermate. Start applications of floral dust early, and keep plants protected throughout the season. Prices—8 oz. gun 89c; 1 lb. carton \$1.15.

DUPONT VEGETABLE GARDEN DUST

For the control of insects and diseases on practically every vegetable grown commonly in the backyard. May be used with complete safety. Effective against aphids, beetles, cabbage worms, and both corn and squash borers; also mildews and blights. Apply as a dust or spray using 3 ounces per gallon of water. Prices—8 oz. gun 89c; 1 lb. can \$1.15.

DUPONT FRUIT TREE SPRAY

Recommended for control of many insects and fungus diseases affecting apples, peaches, cherries, pears, plums, strawberries, currants, gooseberries. Especially formulated for spray application. The wettable powder—1 lb. makes 13 gallons of spray. Spray schedules on the label. Prices—1 lb. can \$1.15; 3 lb. bag \$2.50.

DUPONT

50% TECHNICAL METHOXYCHLOR

A wettable powder that can be used safely on animals, in barns, and on the tenderest plants. Very effective killer of all types of insects. When used in the garden it can be sprayed right up to harvest time because of its low order of toxicity to humans. Kills bean beetle, potato beetle, and flea beetle, Japanese beetle, cabbage worm and many others. Eight ounce can 75c.

DUPONT MARLATE 50

Developed to take the place of D.D.T. for spraying cattle and barns for the control of flies, mosquitoes, fleas, cockroaches, etc. It contains 50% methoxychlor which is comparatively safe to use and non toxicant. One application on animals normally lasts 3 to 4 weeks and on buildings approximately 2 months. One pound will treat about 32 head of cattle. Price—4 lb. bag \$3.75.

DUPONT APHID AND MITE SPRAY

Contains Malthion, controls aphid, red spider and other hard to kill insects. DuPont Aphid and Mite Spray is economical. The 4 oz. bottle for example, makes 16 to 24 gallons of spray. 1 oz. bottle 49c; 4 oz. bottle \$1.25.

BLACK LEAF 40

An insecticide for plants, animals, and poultry. It is a solution of nicotine sulphate, highly recommended by experiment stations throughout the United States as a spray for soft-bodied sucking insects. For spray only. Directions must be followed carefully. One ounce bottle 35c; five ounce bottle \$1.05.

RED ARROW GARDEN SPRAY

Pyrethrum and coconut oil soap, very effective. Red Arrow kills all garden pests, plant lice, red spiders, mealy bugs, etc. Absolutely non-poisonous and therefore, harmless to human beings, domestic pets and birds. Easily applied. Simply mix with water, no soap needed. One ounce bottle makes 8 gallons. One ounce 35c; four ounce \$1.00.

ROACHES—ANTS GONE!

With D-Con roach-proof with special formula RP-200. Just brush it on. Complete with brush. One application effective for months. Guaranteed. 8 oz. only 98c.

END-O-PEST

A triple-acting dust for garden plants which kills insects of all types, and protects against fungus diseases. Ten ounce handy applicator gun retails for 85c; ten ounce refill cartridge 65c each.

ARAMITE 15-W RED SPIDER CONTROL

Controls Red Spider and other mites on evergreens, roses, shade trees, nursery stock, ornamentals and on certain fruit crops, such as apples, peaches, grapes. Safe—sure—easy to use. Just mix with water and spray. Four ounce package makes 16 gallon spray. Four ounce \$1.00; 12 ounce \$2.00.

ANTROL ANT AND ROACH BOMB

New and easy method of killing ants in the home, yard and garden. Not injurious to humans and pets when used as directed. Twelve ounce size \$1.39.

ANTROL ROSE SPRAY FLOWER BOMB

Contains Lindane and Rotenone. Can be used on all types of flowers. No mixing, no pouring, no sprayer to buy. Twelve ounce size \$1.69.

TRI-OGEN

Complete spray for roses. By using Tri-ogen regularly and according to directions, you can control all disease troubles in practically every insect pest in the rose garden. Tri-ogen now contains Ferbam, the wonderful new fungicide. (Kit E) makes two-gallon spray. Protects 6 to 10 roses, \$1.50; (Kit A) makes four-gallon spray, protects 12 to 20 roses. \$2.35.

ISOTOX GARDEN SPRAY

A truly fine insect spray containing Lindane. Kills aphids, box elder bugs, bag worms, Japanese beetles, lace bugs, lawn moth, army worms, mole crickets, white grubs, chinch bugs, cut worms, ear wigs, ants, thrips, flies, wireworms and many other pests. Residual kill up to two weeks. Use on flowers, shrubs, fruit trees, and vegetables. Four ounce bottle \$1.00; eight ounce bottle \$1.75.

CHLORDANE '45' EMULSION

Kills a wide variety of insects infesting garden crops, flowers and vegetables such as ants, grasshoppers, lygus bugs, alfalfa weevil, cabbage worms, cut worms, and many others. Also kills many household pests such as roaches, flies, mosquitoes, silverfish, etc. Use one teaspoon to one quart of water. One ounce 39c; four ounce 75c.

PLANT FOOD-GROWTH STIMULANTS & OTHER AIDS

ALL PRICES ON

POSTPAID

PLANT PLATE

End spraying work and worry with new tested Plant Plate. The spray that stays. Kills insects, prevents fungus diseases and feeds plants through the leaves. Will not burn, seal or injure plant. It is weather proof and stays on for weeks. Kills aphids, red spiders, caterpillars, worms, leaf rollers, thrips, beetles, mites, web worms.

Controls mildews, black spot, blight, rot, leaf spots, and it's foliar fertilizer in addition. Easy to use—economical. 3 oz. \$1.35; 6 oz. \$2.25.

FOLIUM

A 20-20-20 soluble plant food. Use Folium on anything that grows. For use as a leaf feeding solution or on soil or plant. Spray concentrate for use with garden hose attachment on lawn or larger areas. Standard solution 1 level teaspoon dissolved in one quart of water or 10 level teaspoonfuls in 2½ gallons water. 1 pound of Folium in a bucket of water feeds 5,000 square feet of lawn. 2 oz. 25¢; 1 pound \$1.25; 5 pounds \$4.50.

RA-PID-GRO

All soluble plant food. Analysis 23-21-17. For African Violets, house plants, flower gardens, vegetable gardens, and everything that grows. All soluble. Complete instructions on each package. 2 oz. 35¢; 8 oz. 65¢; 1 pound \$1.25; 2 pounds \$2.35; 5 pounds \$4.50.

INSTANT VIGORO

19-28-14. A completely water soluble plant food made by Swift & Co., containing all of the food elements needed by growing plants which is 100% soluble. It can be applied in liquid form to feed plants through both leaves and roots. Recommended for all plants, feeding lawns, shrubs, and gardens. 8 oz. 80¢; 1 pound \$1.25; 3 pounds \$3.00.

FLORALIFE

Makes your cut flowers live longer. A packet to make one quart solution each 10¢; 3 packets for 25¢. Home sized tin, makes 30 quarts \$1.00.

HYPONEX

Simply dissolve and water all of your house plants, garden flowers, vegetables, shrubs, lawns. Produces larger flowers and fruit. Excellent for seedlings, cuttings and transplanting. Clean, odorless. Won't burn foliage or roots if used as directed. Contains all nutritional elements—plus vitamin B₁. Feeds instantly. 1 oz. packet 10¢; 3 oz. can 25¢; 7 oz. can 50¢.

STIM-U-PLANT

African Violet Food. The African Violet craze is on and thousands of people are raising this plant in their homes. These people are asking: "What do I do to make my African Violets bloom?" The answer is a true African Violet food formulated for the successful growing and blooming of African Violets only. Used and tested by commercial growers for 7 years. Two popular sizes, 3 oz. 35¢; 7 oz. 60¢.

GREEN-RAIN

This is vitamins with B₁ added. A scientifically proven new and completely balanced liquid plant food and general purpose garden and lawn nutrient. Develops a strong root structure and is amazingly efficient in promoting growth of plants in any type of soil including dirt, loam, sand, planter mix or water culture. You can see the results. 4 oz. 59¢; 1 quart \$1.75.

KRILIUM

Soil Conditioner. Krilium is the original chemically-made "resin," developed by Monsanto, which acts on soil like the natural gums produced by composts and manures. Merloam is a special formulation of Krilium developed for home gardeners. It contains additional ingredients which keep the Krilium dry and free-flowing and makes it easier to mix in the right amount of conditioner on a given area of soil. 1 pound \$1.69; 5 pounds \$4.95.

ACTIVO

Soil energizer, compost activator. Makes plants bloom better, peeps up lawns—turns waste into fertilizer quickly. Uses leaves, kitchen wastes, grass, rubbish, even sawdust and soot. Safens chemical fertilizer. Treatment for outdoor toilets, septic tanks, and cess pools. Easy to use. Organic. Odorless. The No. 7 treats up to 1700 pounds compost, \$2.69. The No. 2 treats 225 pounds compost for \$1.00.

DU PONT F.T.E.

Growers have long recognized that plants need trace elements. F.T.E. is slow and soluble. A new scientific development brings you these trace elements in a safe, easy to use, long lasting form. Available to plants all season long. One pound can \$1.00; five pound bag \$2.95. One pound treats 400 square feet of lawn or garden area.

ROOTONE

The plant hormone powder for cuttings, seeds, tubers, bulbs. Rootone is easy to use. Rootone stimulates the natural tendency for roots to form on slips or cuttings. Rooting takes place in a much shorter time, heavier root systems are formed and fewer cuttings die from disease. One-fourth ounce 25¢, two ounce \$1.00.

TRANSPLANTONE

The hormone vitamin powder for stimulating roots in transplanting. Transplantone contains the best known chemicals for making roots grow stronger. Transplantone helps grow new roots and reduces loss of water so that plants start growing again in a much shorter time. One-half ounce 25¢, three ounces \$1.00.

ROSETONE

Peps up new roses, gives your new dormant rose bush a successful start. The essential new feeder roots develop faster to nourish the new growth. Established roses also benefit from being watered with Rosetone. A teaspoon full in a gallon of water is enough for several plants. One-half ounce 25¢, three ounces \$1.00.

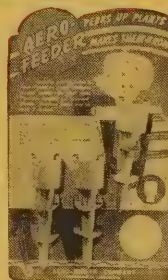

FRUITONE

Hormone spray for preventing pre-harvest drop of apples. Holds apples on the tree longer. Fruitone sprayed on flowers produce better set of seed and fruit, such as tomatoes and beans. Two-fifth ounce package 25¢, two ounce can \$1.00. Makes 25 gallons of spray.

GRO-STUF

A concentrated 20-20-20 soluble fertilizer for leaf or root feeding. Use on house plants (African Violets, Philodendron, Ivy, Begonias) roses, flower and vegetable gardens, shrubs and lawns. Contains all the necessary chemicals—nitrogen, phosphoric acid, potash—plus hormones and trace elements needed to make stuff grow. Five ounce can 49¢, 1 lb. can \$1.25 and 4 lb. can \$3.75.

AERO-FEEDER

Feed and water the easy way. Use an Aero feeder. Perk up plants, make them grow. Three for 29¢, ten for 89¢.

LEAF-BRIGHT

An amazing new and safe neutral leaf polish. It adds a radiant, natural luster to the leaves of green plants as it frees the leaves instantly of dust and dirt. Brighter, cleaner leaves are the result. Accom-

plished in one operation. Drop-wise application with new non-flow liquid principle leaves no residue to remove from tables, pots, or household furnishings. Distribute evenly with soft, clean cloth. Two ounce 59¢, four ounce 79¢.

PLASTIC FLOWER POT

Two piece in eight beautiful colors. Bronze—Cherry Red—Forest Green—Lemon Yellow—Black—Chartreuse—Coral—Gray. Self watering—self feeding—self aerating—hydro-fed flower pot. Exclusively engineered and produced for African Violets and other house plants. 3½" size with contrasting painted decoration. 49¢.

WATERING POT

A handy-dandy plastic watering pot. Comes in the same 8 beautiful colors as the flower pot, but without decoration. Full pint capacity. Ideal for watering and applying liquid plant food. Excellent gift. 49¢.

PERSONALIZED SELF DRAINING RUBBER DOORMAT

(18" x 28") Rubber doormat with your name or any name (not to exceed 13 letters). In brick red, garden green, royal blue or jet black. Personalize your front doorway with this, large sized luxurious doormat. Scrapes every particle of dust, sand, grass, mud and snow from shoes automatically. In both winter and summer it saves hours of house and rug cleaning. All rubber, tough, resilient. Letters are 2½ inches high. Easy to read. This mat is a full one-half inch thick and weighs approximately six pounds, packed for shipment. Price \$5.95 delivered. State color—Print plainly name desired.

BERRY'S TREE WOUND DRESSING

Does everything demanded of a complete universal tree wound dressing.

Rutgers University tests showed complete destruction of the fungus that causes the diseases, "Wilt," "Dutch Elm," and "Canker." Helps prevent rot and helps heal the wounds of pruning.

The tests show complete protection against insect work, while untreated wounds are all damaged by insects, many to a severe extent.

It can be used during any season of the year, does not separate, requires no mixing, is non-poisonous, non-injurious and is easy to apply with brush. ½ pt. 70¢; 1 pt. \$1.25; 1 quart \$1.60.

LAWN AND GARDEN SUPPLIES

NEW IMPROVED GREEN THUMB GLOVES

Soft, washable, for garden and house use. Small, medium and large. Specify size when ordering. Price per pair 89c.

DU PONT CRAB GRASS KILLER

Kills crabgrass and chick weed at any stage of growth. Easy to use as a spray; non-toxicant, non-corrosive. Recommended by lawn care specialists. Seven and one-half ounce bottle, treats 750 to 1500 square feet, \$1.00, thirty ounce size, treats up to 6000 square feet, \$2.95.

WEEDONE CRAB GRASS KILLER

Also kills chickweed and without harm to clover, desirable grasses, or soil. Non-poisonous: contains potassium cyanate (not deadly poison potassium cyanide). Six and one-half ounce can treats 1,000 square feet, 98c; 26 ounce can, \$2.97.

ORTHO CRAB GRASS KILLER

Contains Phenylmercuric Acetate. Kills ugly crab grass, water grass, wire grass or tall grass in lawns, public parks, golf courses, and other grass areas. This is a dry compound and can be applied through the sifter top. One and one-fourth pound box, 79c; four pound box, \$1.95.

HIRSCH-WEIS CANVAS SOIL SOAKER

For deep soaking, the water method approved by agricultural colleges and nursery, now available for home use. Equipped with regular hose connection for attaching to hose or pipe. Prices—12 foot, \$1.70, 18 foot, \$2.25, 30 foot, \$3.50, 50 foot, \$5.65.

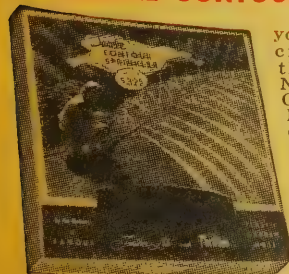

MAYON TRUE PLASTIC GARDEN HOSE

Pure, transparent, vinyl plastic. Not weighted, not combined with rubber, fabric, or any other foreign material. A truly deluxe garden hose, a brilliant fire polished finish. Available in red, green, yellow, blue, and clear transparent colors. A full ten year guarantee. Twenty-five feet, \$5.50, fifty feet, \$9.95.

SANDEE THRIFTY PLASTIC GARDEN HOSE

Thrifty is guaranteed to resist sun aging, abrasion, freezing, cracking, peeling . . . shuns oil, grease. Because it contains no fabric brading to weaken and leak. Thrifty isn't harmed by kinking. It takes the roughest use and snaps back into shape. Full value, five year guarantee. Available in green and red only. Twenty-five feet \$3.50, fifty feet \$6.60.

SANDEE CONTOUR SOAKER

Don't water your plants artificially. Water them with the NEW Sandee Contour Sprinkler. It duplicates the April rains. This gentle rain like mist produced by the Sandee Contour Sprinkler is soft enough to be used with the most delicate blossoms

... without fear of damage. Many green-houses are now using this same contour sprinkler to water their plants. You can start with the small length and build up to a job of any size. Price—25 feet \$3.95, 50 feet \$5.95.

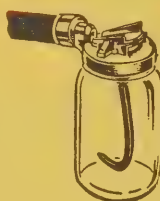

CRAG HERBICIDE 1

Kills weed seeds as they germinate. Recommended especially for use in strawberries, asparagus, sweet corn and gladiolus. Four ounce package \$1.50.

ORTHO LAWN GROOM

Does three big jobs with one application. Feeds the lawn, kills weeds, controls insects such as lawn moths, wire worms, Japanese beetles, etc. Contains fertilizer, 2-4-D Weed Killer and Lindane, the insecticide. Five pound box, \$1.75, 10 pound box, \$2.95.

BRADSON GRO GUN

A garden hose sprayer for applying fertilizers, insecticides, and fungicides. One finger control for spraying proper mixtures or plain water. Won't clog. Easy to clean. Model #20 \$2.95.

MELNOR'S SPRAY MIX

Brand new amazing dispensing nozzle for garden chemicals. Cuts working time in half. Suction action combines soluble fertilizers, insecticides, detergents, and other home and garden chemicals with hose water. Gives faster, better results with far less work. Solid brass, rust proof, comes complete with 5 foot suction hose and filter plus deflector for gentle, wide spray. Fits any hose. \$1.49.

WEED-A-BOMB

Is a sure death to broad leaf lawn weeds which make lawns appear untidy. It kills dandelions, chick weed, plantain, and over 100 other weeds. With easy to use Weed-A-Bomb it is now possible for everyone to have a beautiful weed free lawn. Only \$1.79.

DOO-KLIP STANDARD GRASS SHEARS

America's favorite—natural up and down action. Electro plated blades, keen cutting edge, baked enamel handles. Has 5 1/4 inch cutting stroke. Each, \$2.19.

DOO-KLIP SNIPP-ITT JUNIOR

Smaller, lighter than standard Doo-Klip, same easy up and down action. Electro plated blades, baked enamel handles. Over all length 10 1/4 inches. Four and 1/4 inch cutting stroke. Each, \$1.49.

SCRAM

A dog repellent powder in an applicator package used to keep dogs away from shrubs, lawns, porches, etc. The odor does the trick. 4 oz. can 50c.

DOZENS OF USES

FLY-RODENT AND DISEASE CONTROLS

ALL PRICES ON THIS PAGE POSTPAID

DU PONT DAIRY CATTLE SPRAY

Gives long-lasting and economical control of horn flies, stable flies, and house flies, as well as lice and mosquitoes. Contains the only approved long-lasting fly killer recommended by the USDA for use on dairy cows. It is a convenient wettable powder that is easy to

mix with water in the proper strength for spraying animals. One lb. makes 12 gallon spray. 4 oz. can, 45c; 1 lb. can, \$1.25; 2 lb. can, \$2.20.

DU PONT DAIRY BARN INSECTICIDE

Gives both quick-kill and long residual control of house flies and stable flies. Long effectiveness, as much as 6 to 8 weeks after application, means fewer sprays and lower cost. Dairy Barn Insecticide contains basic chemicals approved by the USDA for use on dairy barns and premises. It is a wettable powder easy to mix with water for convenient spraying. 1 lb. will make 3 gals. of spray or enough to spray 1,500 sq. ft. of barn surface. 1 lb., \$1.60; 4 lbs., \$5.40.

HOPKINS MALATHON

Already accepted on a wide variety of insects and mites, Malathon is now accepted for the control of the commonest, most troublesome of all insects affecting man. Flies! In almost all parts of the country the old stand-by insecticides are no longer controlling flies. Flies have become resistant to various fly killers but not so with Malathon. This new insecticide is giving surprising effective and practical control to those resistant flies. 1 pint, \$3.25. Use 1 oz. to 1½ qts. of water.

D-CON MOUSE PRUFE

A special D-Con formulation for the control of mice. In handy, self-feeding box. Only 49c.

ACME STOP

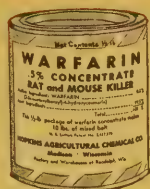

Gummy, sticky oil mass for banding trees, vines, shrubs, posts, to trap all climbing insects—ants, caterpillars, canker worms, walnut worms, etc. Won't run. Remains sticky for months. 1 lb. will make 20 feet of 2 inch wide bands or 70 bands 2 inches wide on one inch diameter vines. 1 lb. can, \$1.05, 7½ lbs., \$6.25.

HUDSON CADET SPRAYER

This duster is adapted for use with all insect powders. Ideal for small gardens and in the home. Each, 75c.

HUDSON COMET SPRAYER

The Comet offers outstanding value in a continuous sprayer at a very attractive price. It will do an excellent job with fly oils and repellents, insecticides, disinfectants. It is, therefore, widely used in homes and gardens, and on the farm. Full quart size, each, \$1.20.

HOPKINS WARFARIN CONCENTRATE

A standard full strength concentrate to be mixed 1 part to 19 parts in edible substance attractive to rodents, such as ground corn, oats, etc. ¼ lb., \$1.75; ½ lb., \$3.00.

RED-I-MIX WARFARIN

A ready-to-use bait scientifically mixed with grain which has proven to be most attractive to rodents and ground to the proper size to induce more feeding. 1 lb., 80c; 2 lbs., \$1.40; 5 lbs., \$2.85.

WARFARIN PELLETS

Expertly blended Warfarin concentrate and grains, compressed into pellet form. Proved to be the most attractive to laboratory and field rats. 1 lb., 95c; 2 lbs., \$1.60; 5 lbs., \$3.25.

HOPKINS RATTUNNL

No 'bother—no fuss—merely pull out telescoped Rattunnl to full length, punch out windows, and place where rats and mice are known to run or feed. Excellent for farm, home, and commercial use. 1 lb., \$1.25.

MOUSE SEED

Kills mice. Tiny grains, impregnated with mice killing chemicals which are practically all absorbed by the kernels. Mice gnaw the grain to get at the kernels, then they die. If full grain is left it indicates there are no more mice. Grain is the natural food for mice, and they are attracted to Mouse Seed because of the peculiar bitter flavor. Generous package, 25c.

MO-GO

Mole Killer (Poison Peanuts). Raw peanuts impregnated with Thallium Sulfate. This type of Mole bait has been marketed for over ten years and has given universal satisfaction. Trial size, 45c; 3½ oz. size, \$1.00.

SMITH RODENT DESTROYERS

Smith Rodent Destroyer kills rats, moles and ground squirrels in their tunnels. Just place in the runs and light the fuse. Each, 15c; doz., \$1.50.

DORMATONE

HORMONE SPROUT INHIBITOR

A hormone sprout inhibitor. Prevents potatoes sprouting in storage. Now you can store your home grown potatoes 12 months without cold storage. Dormatone prevents sprouting and shrinking. Actually improves cooking and eating qualities and appearance. Use also on carrots, turnips, rutabagas. Absolutely harmless. Just dust. 12 oz. sifter can treats 8 bushels. \$1.00.

HUDSON BUGWISER SAF-T-LOK COMPRESSION SPRAYER

New safety lock closure makes the Bugwiser a greater value than ever. Easy to close and open. Offers utmost safety. Rotable spray control valve. Ideal for the home and garden as well as the barns and other out-buildings. Brass nozzle with three discs for solid cone or flat fan spray or whitewash. Each, \$7.50.

SPERGON GLADIOLUS DUST

Controls thrips and corm decay. Contains Spergon and D.D.T. 2 oz., 50c; 1 lb., \$1.95.

SPERGON SEED PROTECTANT

A powder to be applied to seed before planting. Prevents seed decay and damping off particularly in cold weather. Recommended for Peas, Beans, Corn and other seeds. 1 oz., 50c; 5 oz., \$1.75; 1 lb., \$2.50.

CERESAN M

For small grains, cotton, flax, peas, sugar beets, and rice. For dry or slurry application to control certain smut and other seed borne diseases. Reduces seed decay and seedling damping off. 14 oz., \$1.25; 3 lbs., \$3.55. ½ oz. treats 1 bu.

ARASAN

For Corn, Sorghums, Peanuts, Rice, Vegetables, grasses and Legumes. Dry application only. Helps produce better stands and bigger yields. ¼ oz., 25c; 8 oz., \$1.00; 2 lbs., \$3.20. 8 oz. treats 100 lbs.

SEMESAN BEL

Dip treatment for both Irish and sweet potatoes. Protects against seed decay and other important diseases. 2 oz., 50c; 1 lb., \$2.30. 2 oz. will treat 8-10 bu.

I AND D SEED PROTECTANT

Insect and disease control in one combined product for beans and Sweet Corn. Contains Arasan and Lindane. 7 oz. can, \$2.00. 3 oz. treats 100 lbs. seed.

ISOTOX 25 SEED TREATER

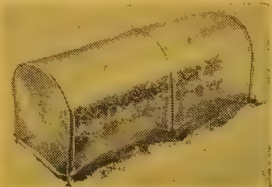

Kills wire worms, seed corn maggot and white grub. Contains Lindane. Isotox seed treatment protects the germination of seeds from wire worm injury. Gives crops a chance to grow to bumper size and to produce top yields. Makes a wise investment, economical to use. Very effective. Rate of application: Corn, 4½ oz. per bushel. Soybeans, 4 oz. per 100 lbs. Price, \$3.45 lb. can.

25% LINDANE WP

For protection against wire worm in corn or barley, beans, certain vegetables and wheat. 2 oz. pkt., 49c; 4 oz. pkt., 95c; lb., \$2.75. 4 oz. treats 1 bu. corn, 100 lbs. beans.

PORTABLE GREENHOUSE

Enables you to be as much as 6 weeks ahead of the planter using ordinary methods. Wonderful for starting potted plants and most other plants and flowers outside. Enables the sun rays to enter, but keeps out frost and cold. Will last many years. Will not crack or peel. 3 ft. length, \$1.79.

RAIN-CHEK

This is an instrument for accurately measuring the amount of rainfall. Simply nail the Rain-Chek to a post which is at least 10 ft. from obstructions, such as buildings or trees. Graduated tube, so that you simply have to look after each rain to tell the exact amount of rainfall. It doesn't predict the showers, but tells how much comes down. Each, 49c.

GRO-COATED GARDEN SEED

We thank you for the many orders for seeds, plants, and nursery stock we have received this past season. Our success is built on your satisfaction.

Food is still high and you will want to plant a large garden this season. If you have not tried Berry's Gro-Coated Brand seeds, we urge you to give them a trial and see the difference.

Our prepaid prices on nursery stock, plants, bulbs, garden, flower and lawn seeds will save you money.

For an added assurance of better growth, we are enclosing a trial packet of Gro-Stuf in all shipments of nursery stock with the exception of strawberries and evergreens.

Due to severe drouth in many of the seed producing areas, some varieties are extremely short, and we would suggest that you order your requirements early.

WHITE BIRCH

Instead of growing clump birch with 2, 3, or 4 stems on one root, we find that planting 2, 3, or 4 individual trees all in one hole gives so much better results. From the start they will be more uniform.

The bark turns white after 2 or 3 years and stays white winter and summer.

MUSKMELONS

CULTURE

Plant in hills six feet apart each way or if in drills, have six feet between rows and thin plants 12 inches in the row. Plant thick and thin out after plants are up.

GREEN FLESHED

412—EARLY HACKEN-SACK, 80 days. A most popular variety for home use and truck gardening. Fruits large, globular flattened. Flesh is thick, very sweet and spicy. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

401—SELECT ROCKY FORD, 92 days. Probably the most widely grown cantaloupe. Almost round. Green flesh of delicious flavor. Fruits weigh about 2½

pounds. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

403—HONEY DEW, 112 days. Green fleshed fruits 7"x8", skin smooth, hard and creamy white, flesh very thick, sweet, juicy and distinctly flavored. A good keeper. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

SALMON FLESHED

406—IROQUOIS, 90 days. Wilt resistant fruits are almost round, prominent ribs, coarse netting, gray-green, about 6½ inches in diameter. Flesh is thick, sweet, and fine flavor, salmon color. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., 90c; ½ lb., \$1.25; 1 lb., \$2.40.

ORANGE FLESHED

420—HALE'S BEST No. 36, 80 days. An outstanding shipping and market variety. Fruits 3 to 4 pounds. Very thick, deep orange colored flesh with a sweet aromatic flavor, and fine texture. Most popular muskmelon grown. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

411—HONEY ROCK, 81 days. All America Winner and one of our most popular varieties for the home garden. Very early, weighs about 4 lbs., flesh thick and very sweet. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

413—HEARTS OF GOLD, 90 days. Fruits round, about 3 pounds. Very small seed cavity. Tender, juicy, sweet with delightful flavor. A superior home garden melon. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

415—BANANA MELON. A long variety tapering at both ends. Skin is lemon color, when maturing. Pink flesh, delicious eating quality. Weighs 5 to 7 pounds. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; 1 lb., \$2.25.

WATERMELONS

CULTURE

Plant in hills about 8 feet apart each way. Don't disturb the vines after they start to run. Don't plant until ground is warm and cover only about 1 inch.

368—KLECKLEY, Wilt-Resistant. 86 days. This Wilt-Resistant strain of the old favorite is deliciously sweet, tender and crisp. White seeds. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.00; 1 lb., \$1.75.

356—CONGO, 88 days. This new watermelon has proved satisfactory in all areas. It has an extremely strong thick rind. Color alternately light green and very dark green. Flesh deep red and tasty. Resistance to Anthracnose. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.20.

350—BLACK DIAMOND, 95 days. A very large melon, dark green, nearly round. Flesh firm and red. Very sweet. Ships well and is one of the best all purpose varieties. Seeds large, dark brown. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.20.

361—DIXIE QUEEN HYBRID, 85 days. This new Hybrid is really queen in its class. Disease resistant and a heavy producer. Fruit nearly round or stumpy oval, 15x12 inches. Color light green with darker green stripes. Weight 35 to 40 pounds. Flesh is very bright red, crisp and delicious. No hard center. Postpaid: Pkt., 25c; oz., \$1.45.

374—DIXIE QUEEN, 85 days. Not quite so large as the Hybrid, although, a fine melon for shipping and the home garden. A heavy producer. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.20.

377—STONE MOUNTAIN. Light veined with dark green. Fruits round, weight about 45 pounds. Flesh rich red of fine texture, tender, sweet, luscious. Wilt-Resistant. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.00; 1 lb., \$1.80.

360—TOM WATSON, 85 days. Very popular shipping melon of the long type. Keeps well. Flesh bright red of excellent flavor. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 60c; ½ lb., \$1.00; 1 lb., \$1.80.

369—GOLDEN HONEY, 88 days. A novel item for the home and market gardens. Dark green, medium sized, long oval shape, cream colored flesh which is very tender and delicious. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.20.

BERRY'S

TOMATOES

EARLY VARIETIES

655 EARLIANA. 65 days. This is a safe early variety that has proved its worth to thousands of gardeners for many years. Our Earliana seed is an improved strain that will please you. Pkt. 10c; $\frac{1}{2}$ oz., 35c; oz., 60c. Postpaid.

649 SIOUX. 65 days. Fruit large, smooth, attractive, red in color and meaty. Vines have a spread of 4 to 6 feet. Foliage remains in good condition throughout the season. Pkt. 10c; $\frac{1}{2}$ oz., 40c; oz., 70c. Postpaid.

665 MARGLOBE. 77 days. A most popular all purpose variety, very vigorous and productive, disease resistant. Uniformly large solid fruits, bright scarlet of finest quality and flavor. Pkt. 10c; $\frac{1}{2}$ oz., 30c; oz., 50c. Postpaid.

664 RUTGERS. 76 days. A heavier yielder. It ripens from the inside out to a uniform bright scarlet color. Thrives under more unfavorable conditions than other varieties. Pkt. 10c; $\frac{1}{2}$ oz., 30c; oz., 50c; $\frac{1}{2}$ lb., \$2.00. Postpaid.

SPECIAL FAVORITES!

656 BERRY'S EARLY WONDER. 75 days. Our choice for slicing or canning. A great yielder of large smooth bright scarlet fruit. Pkt. 25c; $\frac{1}{2}$ oz., 40c; oz., 60c; $\frac{1}{4}$ lb., \$1.75. Postpaid.

679 GOLDEN QUEEN. 84 days. A main crop, large, smooth, bright yellow tomato. Good for home gardens. Fruit are solid and of mild flavor. Pkt. 10c; $\frac{1}{2}$ oz., 40c; oz., 70c; $\frac{1}{4}$ lb., \$2.25. Postpaid.

670 WHITE BEAUTY. Many feature this variety. An ivory white tomato with paper white flesh. As big as Ponderosa with few seeds and no acid. Pkt. 10c; $\frac{1}{2}$ oz., 50c; oz., 90c. Postpaid.

648 ORANGE JUBILEE. 72 days. Orange yellow in color. It is novel in appearance and makes a delicious juice of attractive color. Pkt. 10c; $\frac{1}{2}$ oz., 40c. Postpaid.

675 BEEFSTEAK. 83 days. A splendid late variety for the home garden. Produces an abundance of large size fruits. Rich pink in color. Smooth and uniform. Flesh solid, juicy. Pkt. 10c; $\frac{1}{2}$ oz., 50c; oz., 85c. Postpaid.

STOKESCROSS F₂ OF THE HYBRID

642 STOKESCROSS #1. A wonderful early hybrid tomato which ripens in 65 days after transplanting. Yields a fabulous amount of beautiful fruit. Very solid.

643 STOKESCROSS #4. This brilliant hybrid ripens in 80 days after transplanting. Produces enormous amounts of large, solid, highly flavored fruit. Makes an excellent canning tomato or for table use.

644 STOKESCROSS #5. This new hybrid will really produce. Plants are vigorous and very productive, bearing fruit until killed by frost. Ripens in 85 days. Fruit medium size, bright red, meaty and firm.

Prices for above three varieties: Large Pkt. 25c; Trade Pkt. (about 500 seeds) \$1.00. Postpaid.

F₂ OF THE HYBRID PLANTS (Available in Above 3 Varieties)

These are field grown and are more hardy than the tender plants you get from the Greenhouse. Each plant has a well developed root and will make a quicker start. Available April, May and June. Postpaid: 25 of one variety only \$1.25; 100 for \$2.69; 500 for \$5.29; 1000 for \$9.98.

LATE OR MAIN CROP

SMALL FRUITED VARIETIES

666 GIANT IMPROVED PONDROSA. 90 days. The largest tomato developed to date. A favorite of thousands. Almost seedless, making it fine for slicing. Vines are vigorous and productive, fruits large, oblong-purplish red, thin skinned and solid. Pkt. 10c; $\frac{1}{2}$ oz. 40c; oz. 75c. Postpaid.

659—Red Pear.
673—Yellow Pear.

677—Small Fruited Mixed.
699—Ground Cherry.

10c Per Packet Postpaid.

NO-SEED HORMONE Blossom-set

Earlier, More Tomatoes with No-Seed Blossom Set. Just mix with water and spray. Stops blossom-drop; makes blossoms set fruit chemically. Tomatoes ripen 2 to 4 weeks earlier. Fruits are larger, firmer, seedless and more delicious. 4 oz. makes 1 gal., 75c; Pint makes 4 gals., \$1.75. Postpaid.

671—OXHEART. 87 days. A distinctively attractive variety, entirely different from any other tomato. Increasing in popularity each year because of its very solid meaty fruits of a delicious sub-acid flavor, almost seedless. Flesh is pink. Pkt. 10c; $\frac{1}{2}$ oz. 45c; oz. 85c. Postpaid.

Berry's

Extra Delicious Vegetables • Beautiful Flowers

GRO-COATED for Greater Assurance of Better Stands

FIESTA COSMOS

All the festival colors of old Mexico, combined in one flower by the plant breeder's magic, bring this sparkling newcomer All-America's TOP AWARD for 1952. For the first time, anywhere, there is a true scarlet in Cosmos. Easy to grow. No. 1204—Pkt., 15c, postpaid.

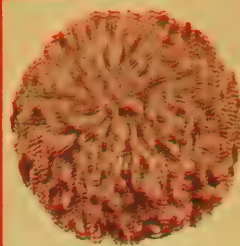

LIPSTICK PETUNIA

A vigorous new petunia in the dwarf bedding or Hybrid Nana Compacta class with an unusual color. Plants are compact, 12 to 14 in. high. Early and extremely free flowering, bearing a wealth of 2½ in. flowers all summer. No. 1314—Pkt., 25c, postpaid.

PEPPERMINT STICK ZINNIA

Color range is wide covering red and white, red and yellow, pink and white, orange and yellow, and purple and white, with many flowers colored exactly half and half. An early strain and will bloom till frost if kept picked. No. 1402—Pkt., 15c, postpaid.

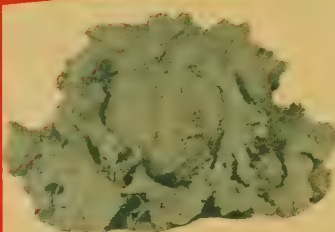

GOLDEN HARVEST SWEET CORN

GOLDEN HARVEST. 82 days. An excellent new variety of yellow sweet corn. Ears 8 inches long. Plant 6½ feet tall. The most important improvement of this hybrid over most available hybrids lies in its white silks inside the husks. Is resistant to bacterial wilt, and is highly resistant to the Northern corn leaf blight. Excellent for canning or freezing. No. 267X—Pkt. 23c; ½ lb. 40c; 1 lb. 75c.

GREAT LAKES LETTUCE

A HOME GARDEN VARIETY, that will really stand up, and will produce hard heads in hot weather. The heads are of medium size, attractive deep green with thick, crisp leaves folding over the heads. Remains in condition long after forming. Resistant to tip burn. All America Selection. No. 339—Pkt. 15c; oz., 50c; ¼ lb., \$1.75, postpaid.

WADE BEAN

55 days. All-America Gold Medal Award. A first choice for the home gardener. Very resistant to disease. The large slender pods are quite uniform and borne well above the ground. An outstanding variety for canning, freezing or shipping. No. 153—Pkt., 20c; ½ lb., 40c; 1 lb., 70c, ppd.

CHERRY BELLE RADISH

All-America Bronze Medal Winner. A small, round cherry, scarlet short top radish, that matures quickly. Delicious at eating stage. We consider it our best early radish. No. 535—Pkt., 10c; oz., 25c; ¼ lb., 60c, postpaid.

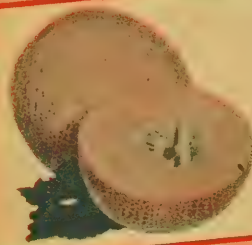

HYBRID CUCUMBER

All-Time All-America Winner for 1953. Sure Crop. White spine type, matures in 58 days. Fruits are slender, blunt ended and hold its dark color quite well. Fine for slicing or may be used for pickles at early stages of growth. Excellent flavor and texture. No. 241—Pkt. 25c, postpaid.

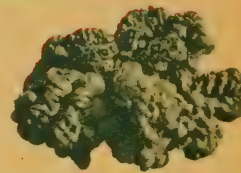

MUSKMELON

GRANITE STATE is a wonderful, medium size melon, developed especially for northern areas, or where an early melon is desired. Flesh is firm, thick and bright orange. Very sweet. Unusually high sugar content. Mildew resistant, prolific and quite early. Don't overlook this outstanding variety. No. 410—Pkt. 15c; oz., 35c, postpaid.

AMERICA SPINACH

50 days. All America Silver Medal Winner. A new strain noted for its long standing and heavy yields. Leaves glossy, dark green, thick and tender, rounded and heavy savoyed. It is an excellent slow bolting type. No. 584—Pkt. 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.25, postpaid.

BABY BEET

An early variety of deep blood red color. A selection of equally superior quality for table, canning and pickling. Smooth globe shaped roots with short tops. Extra sweet and crisp. It matures quickly but is a splendid keeper. No. 164—Pkt., 10c; oz., 25c; ¼ lb., 90c; 1 lb., \$2.50, postpaid.

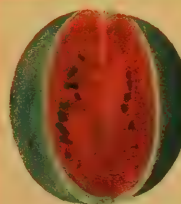

POPCORN

SILVERGOLD. 105 days. A wonderful new novel popcorn of South American strain with flavor and tenderness of the White Hulless type. Ears are large, mixed with gold and silver kernels. Only a limited supply available. No. 308X—Pkt. 20c, postpaid.

MIDGET WATERMELON

New Hampshire Midget. Under favorable conditions it ripens in 65 days from seed. Light gray green in color with narrow, irregular stripes. Flesh bright red solid and sweet. Its average weight is about 3 pounds. Vines are small. An excellent melon for the home gardeners. No. 362—Pkt., 15c; oz., 35c, postpaid.

1 Pkt. each of the above 13 varieties \$2.18 value for \$1.95, Postpaid. Order No. 52X.

Berry's QUALITY GARDEN BEANS

GRO-COATED

Culture: Plant after all danger from frost has passed and for succession every 3 weeks throughout the season. Sow the bush varieties in rows 2 feet apart and 4 inches apart in the row. Plant the pole varieties in hills 2 feet apart one way by 3 feet the other, dropping about 5 or 6 beans in a hill and set a pole firmly in each hill. Cover all varieties about 1½ inches deep with fine soil well pressed down to insure good germination.

Topcrop

YELLOW POD WAX BEANS

126—NEW BRITTLE WAX. 53 days. The outstanding variety for the home garden. Plant large, erect, vigorous, very productive. 104—CHEROKEE WAX. 53 days. A new introduction. Pods entirely stringless, rich golden yellow, fleshy and tender. With less fiber. Ideal for canning or freezing. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

127—PENCIL POD BLACK WAX. 55 days. Of finest quality. Large plant, very productive. Pods round, slightly curved, golden yellow, absolutely stringless, brittle and without fibre. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

130—TOP NOTCH GOLDEN WAX. 51 days. This is an improved strain of regular Golden Wax. Pods average one inch longer and are much more productive. Very

Top Notch Golden Wax

early—our best for the home gardens. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

GREEN POD BUSH BEANS

134—BURPEE'S STRINGLESS GREEN POD. 50 days. The old favorite garden bean for home, market or canning. Plants sturdy; very prolific. Pods round, fleshy, perfectly stringless, of excellent quality. Postpaid: ¼ lb., 18c; ½ lb., 33c; 1 lb., 55c; 3 lbs., \$1.50.

105—TOPCROP. 51 days. An All America Gold Medal Winner. One of earliest of the green pod bush beans. Pods are five and a half inches in length, round, dark green, stringless, resistant to mosaic disease. Postpaid: ¼ lb., 22c; ½ lb., 38c; 1 lb., 65c; 3 lbs., \$1.80.

103—CONTENDER. 53 days. Excellent new USDA variety. Resistant to common bean mosaic and mildew, heat tolerant, heavy yielding, attractive, good quality. Pods are about 8 inches long, oval, dark green, stringless. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

116—TENDERGREEN. 50 days. Hardy and prolific. Light green pods 7 in. long are round, meaty, tender, stringless. For the home garden, canners or truckers. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

129—LOGAN. 52 days. A winner for the home and market gardener. Plants 16 to 20 inches tall, upright, with large, medium green leaves. Pods long, straight, light green, stringless, meaty and smooth. Excellent for canning and freezing. Postpaid: ¼ lb., 22c; ½ lb., 38c; 1 lb., 65c; 3 lbs., \$1.80.

POLE BEANS

144—CUTSHORT. 72 days. A favorite for planting in corn. Short, fat pods. Postpaid: ¼ lb., 20c; ½ lb., 33c; 1 lb., 60c; 3 lbs., \$1.65.

141—KENTUCKY WONDER. 65 days. Best known and most popular pole bean. Heavy producer, pods hanging in clusters. Fleshy green and very crisp when young. Postpaid: ¼ lb., 20c; ½ lb., 33c; 1 lb., 60c; 3 lbs., \$1.65.

119—KENTUCKY WONDER WHITE. Developed by the U. S. Department of Agriculture as a high yielding type of Kentucky Wonder. Plants vigorous with dark leaves. Pods oval smooth straight, dark green, stringless when young. Seeds white. Excellent for dry shell beans. Postpaid: ¼ lb., 20c; ½ lb., 33c; 1 lb., 60c; 3 lbs., \$1.65.

149—MISSOURI WONDER OR NOX-ALL. 65 days. The earliest green podded pole or corn hill bean. Pods long, round and tender. Postpaid: ¼ lb., 20c; ½ lb., 33c; 1 lb., 60c; 3 lbs., \$1.65.

DRY SHELL BEANS

123—DWARF HORTICULTURAL. 60 to 62 days. An extremely vigorous bean. Used for snap beans, but grown chiefly for green shelled beans. Stringless. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 65c; 3 lbs., \$1.80.

148—GREAT NORTHERN OR IDAHO. 90 days. A tremendous yielder of large white beans. Exceptional quality, the best for soup or baking. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 45c; 3 lbs., \$1.20.

147—MICHIGAN NAVY. 95 days. A hardy and prolific small, almost round white navy bean. Used generally for baking. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 45c; 3 lbs., \$1.20.

150—RED KIDNEY. 95 days. The old-fashioned baking bean. Produces large flat green pods, well filled with large dark red kidney-shaped beans. Postpaid: ¼ lb., 18c; ½ lb., 35c; 1 lb., 55c; 3 lbs., \$1.65.

LIMA BEANS

138—FORDHOOK BUSH. 75 days. Potato Lima type. Plants strong, erect, bearing pods in clusters of four to eight. Postpaid: ¼ lb., 22c; ½ lb., 38c; 1 lb., 65c; 3 lbs., \$1.80.

139—BURPEE'S BUSH. 77 days. Very early. Plants dwarf, vigorous growers, bearing until frost. Pods large, tasty, finest quality. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

137—HENDERSON BUSH. 65 days. The small butter bean known as "Baby Lima." Plants bushy, very productive. Early Delicious flavor. Postpaid: ¼ lb., 18c; ½ lb., 33c; 1 lb., 55c; 3 lbs., \$1.50.

152—CANGREEN. 68 days. Can-green is notable for the green color of the fleshy part of the seed in the dry stage. This makes it attractive for canning either by the canner or in the home. It is also prolific, yielding a large crop of pods and seeds. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

124—GIANT SPECKLED LIMA. 90 days. Tall and strong plants. Stands up well in summer weather. Seeds 4 to 5 per pod, large oval greenish white with reddish mottling. Postpaid: ¼ lb., 20c; ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

Burpee's Bush Lima

Paradise

ASPARAGUS

101—WASHINGTON RUST PROOF. Preferred by market gardeners because of freedom from disease. A large straight luscious stalk with firm tips of finest quality. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c; ½ lb., \$1.25; 1 lb., \$2.10.

102—PARADISE. A sensational new and early Asparagus. Producing a normal crop one year earlier than any other. A heavier yielder. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.35; ½ lb., \$2.60; 1 lb., \$4.90.

BROCCOLI

706—ITALIAN GREEN SPROUTING. 70 days. Forms large head consisting of a cluster of small heads. Both heads and stems are cooked and served like cauliflower but is easier to raise and has more delicate flavor. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 35c; ¼ lb., \$1.15; ½ lb., \$2.00; 1 lb., \$3.50.

BRUSSELS SPROUTS

676—LONG ISLAND IMPROVED. 90 days. One of the best varieties for home gardens. The plants are dwarf and compact about 20 inches tall, producing solid round cabbage like balls. Excellent for freezing. Postpaid: Pkt., 10c; oz., 50c.

INOCULATE BEANS AND PEAS

Uni-Culture Garden Inoculation is packed with millions of beneficial bacteria which are effective in stimulating the growth of these garden legumes. This package will inoculate from 1 oz. to 10 pounds of the following seeds: Sweet Peas, Garden Peas, Garden Beans, Lima beans, Lupines and Peanuts. No. N10—15c, postpaid.

¼ lb. Kentucky Wonder 33c
¼ lb. Improved Golden Wax 35c
¼ lb. Henderson Bush Lima 33c

Berry's FINEST TABLE BEETS

GRO-COATED

Culture: Sow as early as ground can be worked in rows 18 inches apart and 1 inch deep. When the plants are large enough, thin out to stand 4 to 6 inches apart in the row. For winter use the turnip varieties may be sown in June, pulled after first frost, tops removed and roots stored.

Good for All

168—DETROIT PERFECTED. 58 days. The outstanding variety for home use, truck gardeners, and canning. Fine quality, tender and sweet. Roots perfectly round. With small tap root, uniform. Flesh dark red with light zone. Postpaid: Pkt., 10c; oz., 33c; ¼ lb., 75c; 1 lb., \$2.50.

154—EARLY BLOOD TURNIP. 55 days. Excels in flavor and appearance. A medium early variety, roots top shaped, dark red, retaining color even when cooked. Sweet and crisp. Matures quickly but is a splendid keeper. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; 1 lb., \$2.35.

167—EARLY WONDER. 52 days. This wonderful early beet is the result of years of reselecting and improving. For earliness it can't be beat. Very uniform in growth, root globular in shape. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; 1 lb., \$2.35.

155—CROSBY'S EGYPTIAN. 53 days. An extra early variety preferred by market gardeners, splendid for bunching. Roots globe shaped, slightly flattened, with small tap root. Finest quality, tender and sweet. Flesh purplish-red. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 70c; 1 lb., \$2.35.

164—GOOD FOR ALL. 55 days. Roots smaller than Detroit. Flesh deep crimson and sweet. Leaves medium size smooth and distinct. A very tender variety for canning or the market gardener. Postpaid: Pkt., 10c; oz., 33c; ¼ lb., 75c; 1 lb., \$2.50.

GRO-COATED BRAND seed is your added assurance of the finest in seed preparations — developed to produce better stands, larger plants and bigger yields.

Detroit Perfected

MANGELS & SUGAR BEETS

Culture: Mangels are very easily grown. A loose or sandy loam type of soil is best to grow mangels. Drill about 6 pounds of seed per acre in rows 2 feet apart. Cultivate right after planting down the drill row. The following varieties are postpaid: oz., 15c; ¼ lb., 50c; ½ lb., 80c; 1 lb., \$1.50.

162—MAMMOTH LONG RED. 110 days. Heaviest yielding and largest of mangels. Flesh pink tinged.

165—KLEIN WANZLEBEN. 110 days. Our best sugar beet. Extremely rich in sugar, flesh fine grained.

SWISS CHARD

158—LUCULLUS. 50 days. Makes continuous greens of delicious flavor throughout the summer. Grows anywhere. Plant from early spring till July. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c; 1 lb., \$2.25.

CELERY OR CHINESE CABBAGE

175—75 days. Most popular for the home garden. Cylindrical, tapering heads. Crisp and tender. Plant during July-August. Makes fine chicken feed. Easy to grow. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 30c; ¼ lb., 95c.

Berry's CABBAGE

GRO-COATED

Culture: Start seed during the early months of the year in hotbeds, covering ¼ inch deep with fine soil. When plants are about 5 inches high and danger of frost is not too serious, transplant to rows 2 feet apart and 15 to 18 inches apart in the row.

179—GOLDEN ACRE. 65 days. A new variety, sure header; heads round and very solid. Yellows resistant. Used by truckers for earliest markets. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.70.

176—EARLY JERSEY WAKEFIELD. 65 days. Small compact conical heads, broad base. Few leaves permitting close planting. A favorite of market gardeners and shippers. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

182—COPENHAGEN MARKET. 68 days. Finest round-headed early cabbage. Heads uniform, solid, excellent quality. Few outer leaves. Desirable likewise for early kraut. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

Golden Acre

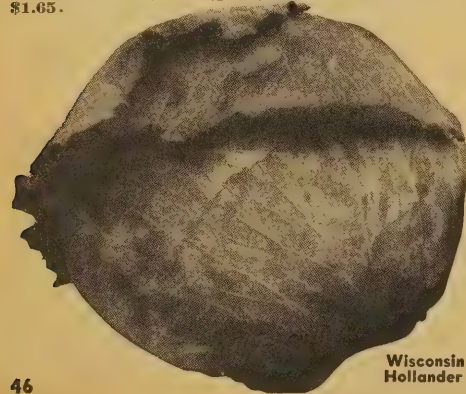

181—EARLY FLAT DUTCH. 80 days. A strain popular with market and home gardeners. Heads almost round, good solid quality, weigh about 5 lbs. Postpaid: Pkt., 10c; ½ oz., 18c; oz., 40c; ¼ lb., \$1.40.

190—WISCONSIN HOLLANDER. 95 days. This strain was developed from Danish Ball-head and will produce solid heads even on "yellows" infested land. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 55c; ¼ lb., \$1.70.

174—MARION MARKET. 80 days. Heads are almost round, very solid. Yellows resistant. Similar to Copenhagen Market but about 10 days later. Postpaid: Pkt., 10c; ½ oz., 25c; oz., 50c; ¼ lb., \$1.60.

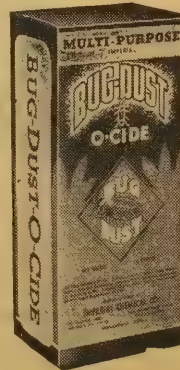

186—PREMIUM LATE FLAT DUTCH. 110 days. Excellent for home and market garden use. Very solid, large, flat heads, 6 to 7 inches deep. High quality. Postpaid: Pkt., 10c; ½ oz., 20c; oz., 50c; ¼ lb., \$1.65.

194—RED ROCK. 95 days. The largest and best red cabbage. It is fine for slaw, pickling or boiled. A sure header, an excellent keeper. Postpaid: Pkt., 10c; ½ oz., 25c; oz., 53c; ¼ lb., \$1.60.

Wisconsin Hollander

Berry's HIGH QUALITY CARROTS

GRO-COATED

Culture: For earliest crop sow in rows 12 to 18 inches apart just as early as the ground can be worked and cover with fine soil about ½ inch deep. When young and plants are well up, thin to 2 to 6 inches apart according to variety.

203—IMPERATOR. 77 days. An unusually fine variety. An All America Selection that does particularly well where soil is deep sandy loam. Roots are smooth slightly tapering to a stump-rooted tip, smooth, rich orange color, very little core, crisp and of fine sweet flavor. Exceptionally attractive for bunching. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

201—OXHEART. 75 days. A short thick variety, best for heavy soil where it can be easily lifted. Roots orange-scarlet, about five inches in length; very heavy yielder. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

204—DANVERS HALF LONG. 75 days. None better for home gardens or market. Flesh bright orange in color and very tender. Grows six to seven inches long, tapered. Very productive. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

205—NEW CHANTENAY. 68 days: A fine sort for bunching, market or home gardens. About 6 inches long, stump-rooted, deep orange in color. A heavy yielder. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.25.

212—NEW CORELESS CARROT. 65 days. The greatest improvement made on any vegetable in years. Fine flavor, tender, and sweet. Early uniform size. Postpaid: Pkt., 10c; oz., 40c; ¼ lb., \$1.35.

211—TENDERSWEET. An outstanding favorite for the home gardener. The rich deep reddish orange is attractive. Flavor is unsurpassed. Postpaid: Pkt., 15c; oz., 40c; ¼ lb., \$1.35.

Chantenay

HEAVY YIELDING STOCK CARROT

206—LONG ORANGE. 100 days. Suitable for stock or table use. Roots red-orange, tapered to a point. A good winter keeper. Oz., 30c; ¼ lb., 80c.

208—WHITE BELGIUM. 95 days. One of the best stock feeding carrots. Oz., 30c; ¼ lb., 80c.

White Plume Celery

CRISP CELERY

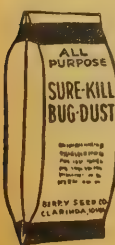

253—GIANT PASCAL. 125 days. An excellent variety for fall and winter use. Large, thick, crisp, stringless stalks with a delicious nut-like flavor. Blanches to a beautiful yellowish-white. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 65c; ¼ lb., \$2.00.

252—GOLDEN SELF-BLANCHING. 105 days. Stalks heavier than white varieties blanching into a rich golden yellow. Fine quality, crisp, tender, free from strings. Postpaid: Pkt., 10c; ½ oz., 40c; oz., 75c; ¼ lb., \$2.60.

BERRY'S "BUG DUST"

A powerful combination of Rotenone Lethane Cuproside and Nicotine. It has a triple action on insects, as a stomach poison, a contact poison, and as a repellent. Non-poisonous to humans and animals.

Berry's Bug Dust controls aphids, bean beetles, flea beetles, leaf hoppers, cabbage worms, cucumber beetles, potato beetles and other insects. Postpaid: 1 lb. bag, 49c; 3 lb. bag, \$1.40; 5 lb. bag, \$2.25.

COOL CRISP CUCUMBERS

241—HYBRID SURE CROP. 53 days. All Time-All America Winner. Disease resistant. Slicing type. Fruits slender, blunt ends, 8 to 9 inches long, holds its dark green color well after picking. Postpaid: Pkt., 25c; ½ oz., \$1.30; oz., \$2.50.

238x WOODRUFF. 62 days. A recent introduction. It is a great shipper and a fine cucumber for the home gardens. Tender flesh, rich dark green in color. Postpaid: Pkt., 15c; oz., 50c; ¼ lb., \$1.60; ½ lb., \$2.95.

226 NATIONAL PICKLING. 56 days. The finest early pickling type. Uniformly smooth. Rounded ends. Flesh thick. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.35; 1 lb., \$2.55.

228 CHICAGO PICKLE. 59 days. One of the most popular pickling varieties; also good for slicing. Mid-season. Fruits medium green, uniform in size. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.35; 1 lb., \$2.55.

233 BOSTON PICKLER. 56 days. Very early and prolific; uniform size, slightly tapered, weigh about 1½ lbs. Dark green. Fine for tables. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 75c; ½ lb., \$1.40; 1 lb., \$2.55.

234 IMPROVED WHITE SPINE. 65 days. Vigorous and productive, fruit uniform, seven to nine inches long, very showy. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c; ½ lb., \$1.40; 1 lb., \$2.55.

239 STRAIGHT 8. 66 days. The highest award winner of the All-American trials in 1935. The best new cucumber. Fruits are of excellent quality, uniform size, dark green color. About 8 inches long, 2 inches wide. Vines vigorous and productive. Ideal for the home garden, local market, or shipping. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., 85c; ½ lb., \$1.60.

236 IMPROVED LONG GREEN. 67 days. Standard late variety. Splendid for slicing, excellent quality. Fruits dark green, weigh 3 to 3½ lbs., flesh white, firm and crisp. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., 90c; ½ lb., \$1.60; 1 lb., \$2.95.

Delicious ENDIVE

315—GREEN CURLED ENDIVE. '96 days. A delicious variety with finely curled compact heart. Very desirable for salads. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c.

317—BROAD LEAVED BATAVIAN OR FULLHEART. 86 days. A medium large plant with a very compact, full heart. The leaves are broad and well blanchied. Handsome in appearance, superbly flavored. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 65c.

EGG PLANT

312—BLACK BEAUTY. 80 days. Valuable to home gardeners and truckers, for market. Ten days earlier than New York. Entirely spineless, sets fruit freely. Fruits are smooth, holding well after picking. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.95.

PEPPY POP-CORN

Culture: Plant when danger of frost is over in hills 3 to 4 feet apart each way, leaving 3 or 4 stalks to the hill. May also be sown in rows 3 feet apart, dropping the seeds 12 to 18 inches apart in the row.

305—WHITE GIANT. Here is something new and different in popcorn. Everyone who likes popcorn should be sure to grow some of it. Kernels as big or bigger than the South American but white instead of yellow in color. Postpaid: ¼ lb., 17c; ½ lb., 30c; 1 lb., 55c.

306x—SOUTH AMERICAN HYBRID. 110 days. A great improvement over the open pollinated type. Larger ears, disease resistant. Can be picked with mechanical picker. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

302x—WHITE HULLESS HYBRID. 95 days. New Min-hybrid 250 White Hull-less is the variety to grow this year. Gives you bigger yields, earlier maturity, better quality and a premium price. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

307x—IOWA POP. 95 days. This new hybrid is rapidly becoming the most widely grown of the Japanese Hull-less type. It is a white popcorn with excellent plant and popping quality. Postpaid: ¼ lb. 20c; ½ lb. 38c; 1 lb. 70c.

POPPING CORN

Hybrid popping corn is far superior to the open pollinated varieties. Will pop better and the flavor is delicious. **P298—4 LBS. Yellow Hybrid.** \$1.15 Postpaid. **P299—4 LBS. White Hybrid.** \$1.20 Postpaid.

White Hullless
Hybrid

VITAMIN RICH Berry's LETTUCE GRO-COATED

Culture: Plant as early in the spring as ground can be worked. Light frost does not harm this crop. Sow seed sparingly in rows not less than 15 inches apart, covering seed ½ inch deep. In leaf varieties plants should be thinned out from 3 to 4 inches apart. For head lettuce start in a cold frame or hotbed and set out as early as possible.

Great Lakes

HEADING VARIETIES

339—GREAT LAKES. 74 days. All America Winner. New York Imperial type that will really produce hard heads in hot weather. Attractive deep green of good size with thick crisp leaves. Resistant to tipburn. Postpaid: Pkt., 15c; oz., 55c.

332—IMPROVED HANSON. 80 days. An old favorite for home and market gardens. A sure heading, hardy type. Large, compact, tender, sweet heads. Postpaid: Pkt. 10c; oz. 30c; ¼ lb., 80c.

333—BIG BOSTON. 75 days. A popular butter-head variety for forcing and outside culture. Will not stand hot weather. A medium sized, compact head with creamy yellow heart. Leaves smooth glossy tinged with reddish brown. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 80c.

336—ICEBERG. 84 days. A large late variety. Conical shaped heads—interior white, sweet and crisp. Outer leaves light green tinged with brown. A home garden variety. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 95c.

337—NEW YORK WONDERFUL #12. 77 days. Earlier than regular New York, but with all the good qualities of the older type. The outstanding shipping variety. Best for market gardens. Large solid heads, crisp and of excellent quality, and fine flavor. Postpaid: Pkt., 10c; oz., 35c; ¼ lb., \$1.05.

LOOSE LEAF VARIETIES

329—EARLY PRIZEHEAD OR BROWN LEAF. 40 days. Prizehead remains crisp and tender longer than others. Plant at least one row and see the difference. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c.

326—BLACK SEEDED SIMPSON. 46 days. Most popular light green variety. Very good for forcing. A heavy producer of large curled leaves. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c.

327—EARLY CURLED SIMPSON. 45 days. A widely used home garden variety. Excellently flavored, curly, crisp and tender leaves. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c.

328—GRAND RAPIDS. 40 days. Excellent for greenhouse forcing and early planting outside. Superior quality with beautiful appearance. Light green heavily fringed leaves. Postpaid: Pkt., 10c; oz., 25c; ¼ lb., 75c.

330—CHICKEN LETTUCE. A hardy tall growing non-heading dark green variety. Ideal for poultry and rabbit feed. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 55c; ½ lb., \$1.00; 1 lb., \$1.85.

324—SALAD BOWL. An all America Selection for 1952. A truly wonderful lettuce. Loose-leaf variety. Rich green, decorative leaves. Fast grower. Leaves hold their tenderness and fine texture over a long period. Supply very limited. Postpaid: Pkt. 15c; oz. 60c.

Berry's FULL FLAVORED PEAS

GRO-COATED

EXTRA EARLY PEAS

455—ALASKA WILT RESISTANT. Extra early. Smooth seeded pea, ready to use in 53 days. Ideal for first market and home garden use. An old reliable variety. Postpaid: ¼ lb., 16c; ½ lb., 25c; 1 lb., 45c; 3 lbs., \$1.20.

464—SUPREME WONDER. 12 inch—63 days to picking. A good reliable early variety. A favorite of many home gardeners for years. A very heavy bearer. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

463—LITTLE MARVEL. 18 inch—63 days to picking. The home gardeners favorite in the Middle West. Excellent quality and high yielding ability. This pea produces when many varieties fail. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

457—PREMIUM GEM. 24 inch—66 days to picking. We think this the best of the Gem Peas. Early and with the fine sugar flavor usually found in later varieties. Reliable for the home garden. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

460—THOMAS LAXTON. 30 inch—61 days to picking. A very popular home garden variety in the East and South. Fine for canning or market garden. Large and sweet flavored, an exceptional yielder. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

TABLE FIELD PEAS

479—CALIFORNIA BLACK EYE. Dwarf or half runner. 95 days. Much more productive than the old type. Postpaid: ¼ lb., 18c; ½ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

Grow PEANUTS

Culture: Shell before planting. Plant in rows 2½ to 3 ft. apart, 10 inches apart in the row. Cover one to two inches. A sandy soil is best.

621—NEW MAMMOTH VIRGINIA. Of upright growth. Large pods and kernels. Always yield less imperfect pods than any other variety. Vines good for stock. Postpaid: ½ lb., 35c; 1 lb., 60c; 3 lbs., \$1.65.

622—IMPROVED SPANISH. Bunch type. Early maturing with 2 white nuts in each pod. Plant 6 inches apart in 18 inch rows. Postpaid: ½ lb., 30c; 1 lb., 50c; 3 lbs., \$1.35.

USE BERRY'S BUG DUST

Don't wait until the pests have destroyed your garden. Order Berry's Bug Dust with your seed order. See pages 46-47.

PARSNIPS

502—IMPROVED HOLLOW CROWN. 95 days. Roots long, white and smooth; hollow crowned. Tender and of excellent flavor. A good keeper. Grows 10 to 12 inch roots. Many gardeners prefer to leave parsnips in the ground over winter. Freezing is not harmful to this vegetable and improves the flavor. Postpaid: Pkt. 10c; oz., 25c; ¼ lb., 70c; ½ lb., \$1.25.

CULTURE

Plant as early as anything in garden. Light freezing does not hurt peas. Make successive plantings about one week apart. Peas will grow on poorer soils than most crops. Smooth varieties are hardiest, wrinkled varieties of finest quality. Plant about 2 inches apart, 2 inches deep.

Early and Mid-Season Peas

465—EARLY FILLBASKET. 24 inch—70 days. Pods 3 to 3½ inches long, slender and straight. Excellent for home gardens, canning or freezing. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

458—FREEZONIAN. 24 inch—70 days. Pods 3 inches long, medium green, slightly curved, containing 6 to 8 large tender peas. An excellent mid-season canning and freezing variety of fine quality. Be sure and try this variety in your garden this season. Postpaid: ¼ lb., 20c; ½ lb., 30c; 1 lb., 55c; 3 lbs., \$1.50.

468—EVERBEARING. 28 inch—75 days. A long bearing, large seeded variety for home and market gardens. Wilt resistant and hardy with a superior flavor. A very popular mid-season variety. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

476—DWARF GREY SUGAR OR EDIBLE POD. Grows 2 to 2½ feet tall—65 days. A sweet, tender, and delicious edible podded variety that is very productive and wilt resistant. Small, smooth, sweet flavored. Postpaid: ¼ lb., 18c; ½ lb., 28c; 1 lb., 50c; 3 lbs., \$1.35.

Freezonian

BERRY'S FAVORITE PEA COLLECTIONS

An early all season pea collection. Plant these four varieties on the same day and have a succession of peas for table, canning and freezing. They will mature in the order listed: **450—**¼ lb. Alaska W.R.; ½ lb. Little Marvel; ½ lb. Fillbasket; ½ lb. Everbearing. 2 lbs.—4 varieties only 92c; 4 lbs.—4 varieties only \$1.70. Postpaid. Save money on peas. Our stock is Western grown and will produce peas of unsurpassed flavor.

Culture: Sow seed ¼ inch deep in hotbed during February and March and when all danger of frost is over, transplant in the open in rows 3 feet apart and plants 2 feet apart in the row. Peppers require a warm, mellow rich soil.

HOT VARIETIES

521—HUNGARIAN YELLOW WAX. 65 days. Peppers pungent and measuring 5 to 6 inches in length, rather slender but meaty, and tapering to a somewhat twisted point. They are waxy canary yellow in color, presenting a handsome appearance, and turn to a beautiful crimson at maturity. Very prolific and desirable. Postpaid: Pkt., 10c; ½ oz., 45c; oz., 80c; ¼ lb., \$2.40; ½ lb., \$4.50.

512—CAYENNE. 70 days. A favorite hot variety used largely for canning, pickles and drying. Plants large and productive. Fruits long, tapering; deep green changing to brilliant red. Postpaid: Pkt., 10c; ½ oz., 40c; oz., 75c; ¼ lb., \$2.25; ½ lb., \$4.25.

519—CHILI. 80 days. Used for canning and drying. Fruits long and tapering, deep green changing to bright scarlet; extremely hot. Postpaid: Pkt., 10c; oz., 40c; oz., 75c; ¼ lb., \$2.25; ½ lb., \$4.25.

Berry's HIGH QUALITY PEPPERS

GRO-COATED

SWEET VARIETIES

518—CALIFORNIA WONDER. 75 days. One of the finest mild sweet flavored peppers, with thicker flesh than other varieties. Upright, prolific, vigorous grower. Very attractive, smooth, uniform and deep green. Excellent for shipping home or market gardening. Postpaid: Pkt., 10c; ½ oz., 45c; oz., 80c; ¼ lb., \$2.60.

514—GOLDEN QUEEN. 78 days. A large yellow variety with sweet and mild flavor. Resembles Ruby King in size and shape. A deep green turning to attractive yellow. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$2.60; ½ lb., \$3.75.

513—KING OF THE NORTH. 65 days. A sweet pepper like Ruby King but earlier. 65-70 days from time of setting out until fruit is ready to use. Plants 22-26" tall, erect, very heavy yielding and hardy. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

517—PIMIENTO. 85 days. A good canning variety. Fruits heart shaped and very smooth; color dark green changing to crimson. Flesh thick, sweet and mild. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.80; ½ lb., \$3.50.

515—RUBY KING. 70 days. Excellent for home and market garden and shipping. Plants medium dwarf, erect, productive. Fruits dark green turning to ruby red. Flesh thick, mild and sweet. Used for mangoes. Postpaid: Pkt., 10c; ½ oz., 35c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

Ruby King Pepper

Berry's ONION

SEED AND SETS

YELLOW ONION

435—YELLOW GLOBE DANVERS. 105 days. A splendid variety for home gardens and market. Nearly globe shaped with pure yellow skin, white flesh, and mild flavor. Very productive with fine keeping qualities. Postpaid: Pkt., 10c; oz., 55c; ¼ lb., \$1.65; ½ lb., \$2.95.

425—YELLOW SWEET SPANISH. 110 days. The most popular onion grown. Golden yellow, extra large and mild, very pleasant

Yellow Sweet Spanish

flavored white flesh. An unusually heavy yielder. Postpaid: Pkt., 10c; oz., 60c; ¼ lb., \$1.80; ½ lb., \$3.50.

RED VARIETIES

432—SOUTHPORT RED GLOBE. 110 days. The finest of the red onion. Good for sets or storage. Uniform in size, handsome perfect globe shaped. An excellent keeper. Skin glossy red, flesh white, fine grained and tender. Postpaid: Pkt. 10c; oz. 60c; ¼ lb. \$1.80; ½ lb. \$3.50.

GARLIC SETS

448—GARLIC SETS. A bulbous root of the onion type, easily grown, used for flavoring. When leaves turn yellow, dig and dry in shade. Postpaid: ½ lb., 40c; 1 lb., 70c.

PUMPKINS

Culture: Plant seed in moderate rich soil when ground has become warm and danger of frost has past, in hills about 6 feet apart, covering lightly. Keep each variety separate as they are liable to mix. Pumpkin seed may be planted with corn with very satisfactory results.

481—MAMMOTH PRIZE. 115 days. The largest of all Pumpkins. Valuable for stock feeding, but is also fine for pies. Flesh is thick, of a beautiful bright yellow, fine grained, solid and tender. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 70c; ½ lb., \$1.35; 1 lb., \$2.50.

483—SWEET, OR SUGAR PIE. 105 days. Standard variety for pies. Flesh thick, dry and sweet, orange-yellow and of superior quality. Fruits weigh 6 to 8 lbs., keep well. Will make pies that will melt in your mouth. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

485—KENTUCKY FIELD. 115 days. Used largely for canning. Grow large, flat, weigh 10 to 15 lbs. Flesh deep yellow, coarse, thick and nutritious, and of good flavor. Also used for stock feeding. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

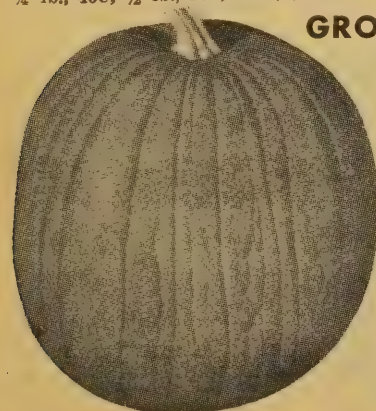

486—CONNECTICUT FIELD. 115 days. The standard cornfield pumpkin. Fruits grow large, weigh 15 to 25 lbs. Smooth, hard, orange-red skin; flesh orange-yellow, thick, coarse, and sweet. Fine for pies, canning, or feeding to stock. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

484—CUSHAW OR CROOKNECK. 110 days. Very popular variety. Very large, often 2 ft. long, crook-neck shape. Creamy white shell; flesh yellow, solid, sweet. Excellent for pies; use also for stock feeding. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

487—GREEN STRIPED CUSHAW. 110 days. Cream with dark green stripe, 16-20 in. long, weigh 12 to 16 lbs. Yellow flesh. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 40c; ½ lb., 80c; 1 lb., \$1.50.

Mammoth Prize

NEW CROP—HIGH GERMINATION—Gro-Coated Brand

Culture: Onion seed germinates well in cool weather and may be planted very early in spring as soon as the ground can be prepared, in rows 12 to 15 inches apart, covering about ½ inch with fine soil well pressed down. When plants are 3 or 4 inches high, thin to 4 inches apart in the row.

WHITE ONION

434—WHITE SWEET SPANISH. 110 days. The largest and mildest of all onions. Globe shaped, pure white flesh, very firm, and mild. An unusual producer. Postpaid: Pkt. 10c; oz. 70c; ¼ lb. \$2.10; ½ lb. \$3.95.

440—WHITE BERMUDA OR CRYSTAL WAX. 93 days. Clear white, mild, delicate flavored large flat onion of superior quality. You can grow Bermudas from seed. Postpaid: Pkt. 10c; oz. 55c; ¼ lb. \$1.65; ½ lb. \$2.95.

433—SOUTHPORT WHITE GLOBE. 110 days. A splendid commercial onion, attractive in color, size and shape. A smooth globe type, flesh mild, fine grained and tender. A very heavy producer. Postpaid: Pkt., 10c; oz., 55c; ¼ lb., \$1.65; ½ lb., \$2.95.

441—WHITE PORTUGAL OR SILVER SKIN. 100 days. The most widely used white onion. This all purpose variety can be used for sets, pickling, green bunching or storage. Bulbs are medium size, flat, clear white, hard, fine grained, and of pleasing flavor. At picking stage bulbs are small, smooth and round. Raise your own this year. Postpaid: Pkt., 10c; oz., 55c; ¼ lb., \$1.65; ½ lb., \$2.95.

ONION SETS

Our onion sets are small sets. This means they are produced under the most ideal conditions. Berry's sets are long keepers, uniform in size and of finest quality. We guarantee delivery of your set order free from sprouts.

444—YELLOW. Postpaid: ½ gal., 60c; 1 gal., \$1.10.

Onion sets will be available from February 15th until supply is exhausted. We cannot ship onion sets after April 15th.

QUALITY ONION PLANTS. SEE
PAGE 52.

Southport Yellow Globe

Berry's CRISP RADISHES

GRO-COATED

Culture: Sow seed as early as ground can be worked in rows about 15 inches apart. Cover with ½ inch of fine soil firmly pressed down. Sow the winter varieties in the last summer or early fall. Like the turnip they make their growth in the autumn.

530—EARLY WHITE TURNIP. 20 days. This popular radish is the earliest white radish and ready for the table in 24 days. Pure white, crisp and tender. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

526—CRIMSON GIANT. 28 days. The largest early radish. Will still be crisp and tender after growing to a huge size. We have had radishes two inches in diameter that were still sweet and crisp. The best all season radish in our trials. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

525—SPARKLER OR SCARLET TURNIP WHITE TIP. 26 days. The best of the white tip radishes from our observation. A very solid, tender, sweet, flavored radish, second only to Crimson Giant in ability to withstand pithiness. A most attractive variety, the scarlet top contrasts with the white bottom producing a showy product. Very popular with market gardeners as well as home gardeners. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

528—EARLY SCARLET TURNIP. 25 days. An early maturing variety. Roots small, round with red skin. Flesh very white, mild and crisp. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

553—FRENCH BREAKFAST. 25 days. A popular variety for forcing or early outdoor planting. Gets hollow in warm weather. Medium sized, olive shaped. Scarlet with white tip. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

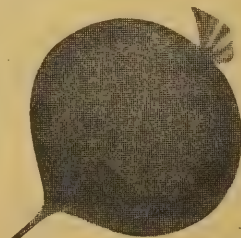

541—ICICLE. 27 days. The most popular white variety. Grows long and slender, free from side roots. Flesh clear white, brittle, mild flavored. Postpaid: Pkt., 10c; oz., 18c; ¼ lb., 45c; 1 lb., \$1.20.

542—CHINA ROSE WINTER. 52 days. Bright rose-red in color, 4 to 6 inches long, 2 inches in diameter, cylindrical shape. Flesh white, crisp, and mild flavored. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 50c; 1 lb., \$1.35.

543—LONG BLACK SPANISH. 50 days. One of the hardest and best winter keeping varieties. Large, firm, jet black skin, flesh snow white. Solid, crisp and pungent. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 50c; 1 lb., \$1.35.

Sparkler

Crimson Giant

3 DELICIOUS SNAPPY RADISHES

The three best radishes for the home garden. Extra early, tender, snappy, delicious. Each one a superior variety. No. 539—35c Value at 24c. Postpaid.

1 Pkt. Cherry Belle
1 Pkt. Crimson Giant
1 Pkt. White Icicle

24c Postpaid

Berry's TABLE SQUASH

552—GOLDEN HUBBARD. 100 days. Earlier than improved Hubbard. Fruits 8 to 10 pounds with a hard warty orange skin. Thick, yellow, fine grained, dry flesh; excellent quality for canning and freezing. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

554—IMPROVED HUBBARD. 100 days. Standard winter variety for home and market gardens. The best shipper. Our strain is very early. Dark bronze-green, rind hard and tough, slightly warted. Fruits weigh about 12 pounds, flesh very thick; orange-yellow, fine grained, sweet and dry. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

558—BUTTERNUT. 100 DAYS. An ideal home garden baking type, of highest quality. Flesh dry, light yellow with nutty flavor. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c.

Improved Hubbard Squash

Berry's SURE TO GROW TURNIPS

601—PURPLE TOP STRAP LEAF. 46 days. An early, very productive variety. One of the most extensive grown kinds for home or market gardens. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

607—PURPLE TOP WHITE GLOBE. 57 days. The most popular home and market garden variety. A good shipper. Very attractive appearance, fine in quality. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

606—SEVEN TOP. 45 days. Grown for the tops which are excellent for greens and stock grazing. The roots are fibrous and of poor quality. May be left standing in the open ground during the winter, except in the extremely northern states. Extensively cultivated in the South. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

604—SNOWBALL. 75 days. A late white variety grown largely in the South. Tops are large with cut leaves. Postpaid: Pkt., 10c; oz., 20c; ¼ lb., 40c; ½ lb., 65c; 1 lb., \$1.20.

Value \$1.53
Our Special Price \$1.33
Save 50c.

Culture: Plant in hills 4 to 6 feet apart each way. Put about 6 to 8 seeds in a hill and after plants are well established, thin out to three or four of the most vigorous plants.

556—BUTTERCUP. 100 days. A new introduction just the right size for baking. Grows exceptionally well in the Great Plains region. Of excellent quality, flavor is similar to sweet potatoes. Flesh dry, deep rich orange, texture and keeping qualities the best. Postpaid: Pkt. 10c; oz., 35c; ¼ lb., 95c.

557—TABLE QUEEN OR DES MOINES. 58 days. Individual size squash. Desirable for home or market garden; also a good shipper. Fruits acorn-shaped, smooth, thin shelled, dark green. Flesh light yellow, with sweet flavor. Makes splendid pies, bakes well. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

SUMMER SQUASH

561—MAMMOTH WHITE BUSH SCALLOP. 56 days. A favorite with all our trade. An early maturing round flat squash, largest of the summer varieties. Fruit is clear white, and excellent for stewing. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

553—GIANT GOLDEN STRAIGHTNECK. 55 days. A new variety selected from the crookneck. The straight neck permits easy packing and handling. Fruits 18 to 20 inches long, heavily warted, deep orange color. Thick and meaty flesh. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.40; 1 lb. \$2.50.

560—CASERTA. 50 days. All America Selection Gold Medal Winner. Earliest of all squash. Fruits 15 to 18 inches long, 4 to 5 inches wide. Attractive color, excellent flavor. Postpaid: Pkt. 10c; oz. 45c; ¼ lb. \$1.35.

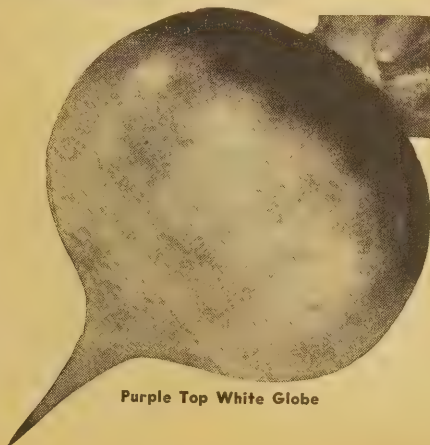

551—BLACK ZUCCHINI. 60 days. Fruits very nearly cylindrical, straight, smooth, dark green-black. Flesh greenish white at eating stage, very good flavor. Postpaid: Pkt. 10c; oz. 25c; ¼ lb. 75c; ½ lb. \$1.45; 1 lb. \$2.50.

Culture: For summer use, sow seed during the early months of the year, ½ inch deep, covering with fine soil well pressed down. When very young thin plants to 4 or 5 inches apart. For fall and winter crop, sow in the late summer in the same manner as directions for an early crop.

603—SHOGGIN. 30 days. The most popular foliage turnip. Grown for early greens and small roots. Tops 18 to 20 inches tall, erect, bright green, strap leaved. Roots round, white, tender and mild. The fastest grower of all. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

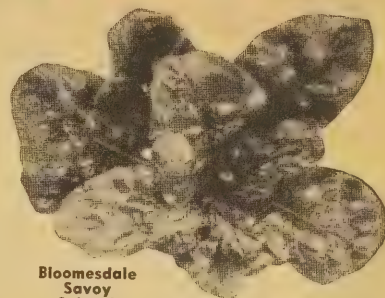

609—COWHORN. 70 days. A stock-feeding turnip. Roots 12 to 15 inches long, tapering. Flesh is sweet and tender. A good keeper. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

612—RUTABAGA, AMERICAN PURPLE TOP. 90 days. A dependable variety for home or market garden. Roots are large, round, yellow with purple top; flesh is light yellow, firm, sweet and tender. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.10.

Purple Top White Globe

SPINACH

Bloomsdale Savoy Spinach

585—NOBLE GIANT. 45 days. Easy to wash. Leaves medium thick, green, very large, broad and smooth, with slight crumpling. Very good quality. The best of the large smooth-leaved type. A long-standing variety. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 45c; ½ lb., 75c; 1 lb., \$1.40.

583—BLOOMSDALE SAVOY. 40 days. An early variety. Popular for local and long distance markets, for canning, and home use. A long keeper after cutting. Leaves medium size, crumpled, glossy dark green. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 45c; ½ lb., 75c; 1 lb., \$1.40.

582—LONG STANDING. 45 days. A quick-growing, long-bearing variety for mid-summer use. Plants grow low and spreading, with pointed dark green leaves. Postpaid: Pkt. 10c; oz., 15c; ¼ lb., 45c; ½ lb., 75c; 1 lb., \$1.40.

581—NEW ZEALAND. 70 days. It thrives in hot, dry weather, and almost any soil. May be cut throughout the summer, but can not stand frost. Leaves small, broad and pointed, while plants are large and spreading. Postpaid: Pkt., 10c; oz., 30c; ¼ lb., 75c.

MUSTARD

712—TENDERGREEN OR SPINACH MUSTARD. 50 days. A quick-growing variety that does not go to seed as soon as other varieties. Resistant to heat and drought. Distinctive superior flavor. Rich in vitamins and iron. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.05.

713—SOUTHERN GIANT CURLED. 65 days. The most popular and best-known mustard for greens. Leaves long, wide, light green, heavily crumpled and curled at the edges. Best known in the South. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.05.

711—FLORIDA BROAD LEAF. 55 days. A large upright plant with unusually large, thick, bright green, smooth leaves. A popular variety. Postpaid: Pkt., 10c; oz., 15c; ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.05.

TOBACCO

720—JUDY'S PRIDE. Broad attractive leaves. Easy to cure. Used for fillers and wrappers; smoking or chewing. Postpaid: Pkt., 10c.

727—HAVANA. An early variety used largely for cigar wrappers on account of thinness and fine quality. Postpaid: Pkt., 10c.

SALSIFY

571—MAMMOTH SANDWICH ISLAND. Vegetable Oyster. An improved variety with roots 6 to 8 inches long, thick, tapering, smooth. Decided oyster-like flavor. Fine for soups, etc. Postpaid: Pkt., 10c; ½ oz., 30c; oz., 50c; ¼ lb., \$1.25.

MAMMOTH SUNFLOWER

MAMMOTH SUNFLOWER. This variety has a high feeding value and is easy to grow. Bears large heads 12 to 20 inches in diameter and sometimes yields 1000 pounds per acre. ¼ lb., 20c; ½ lb., 35c; 1 lb., 55c.

Berry's SOUTHERN GROWN PLANTS

50 of a variety minimum.

We cannot ship plants to California

If you do not specify the date you want your plants shipped, we will ship at the proper planting time for your territory. Plants are guaranteed to arrive in perfect condition for transplanting or we will replace plants or refund your money. Days listed after each variety indicates the time it takes for your plants to produce a crop. Plants often bleach to a yellowish-green or wilt when shipped. This does not hurt the plants and they will resume their natural green soon after transplanting. Complete planting instructions sent with your order.

CERTIFIED TOMATO PLANTS

They have proved to be the most satisfactory for large canning factory and home gardeners. Ready April, May, June.

EARLIANA. 66 days from plants. First early. Bright red.

MARGLOBE. 77 days from plants. Fruit thick, round, deep scarlet, wilt resistant.

RUTGERS. 86 days from plants. It ripens from inside out, wilt resistant. Bright red fruit.

Please state variety and shipping date. Tied 25 of one variety to a bundle.

Postpaid: 25 for 74c; 50 for \$1.14; 100 for \$1.74; 200 for \$2.29; 500 for \$3.98; 1000 for \$6.98; 2000 for \$12.25.

50 of a variety minimum.

CABBAGE PLANTS

Will withstand a temperature of 20 degrees above zero without injury. Ready for shipment October 15th to June. State when you want them. Tied 50 of one variety to a bundle.

EARLY JERSEY WAKEFIELD. 65 days. Pointed heads.

COPENHAGEN MARKET. 70 days. Solid round heads.

CHARLESTON WAKEFIELD. 75 days. Pointed and large.

GOLDEN ACRE. 65 days. Heads round and very solid.

1240—FOUR O'CLOCKS. (A) This old-fashioned flower bears profusely flowers of white, yellow, crimson and pink. Use it for hedges, for foundation plantings, and large beds for public places. Pkt. 10c.

Berry's

SEEDING THE LAWN

The best time to sow the lawn is in early spring. However, beautiful lawns can be obtained from early fall seedings. If the seed is to be sown by hand it should be divided into two equal amounts. Sow one part East to West about six feet in width, and the second part North to South covering the same distance. This method assures equal distribution of seed and prevents patchy, uneven lawns. After seeding the lawn, rake it lightly and roll with a light roller. Keep the entire area moist for about twelve to fifteen days.

1 lb. sows 200 square feet, 10x20.
5 lbs. sows 1000 square feet, 20x50.

BERRY'S SUPREME LAWN SEED

This makes a fine, smooth lawn in the northern half of the United States. Contains chiefly Blue Grass, Red Top, Fescues and Rye Grasses. The quicker growing grasses provide a nice green stand while the slower kinds are coming on. It is our most popular mixture, because it gives such wonderful satisfaction. Postpaid Price: 1 lb., \$1.85; 3 lbs., \$5.25; 5 lbs., \$8.50.

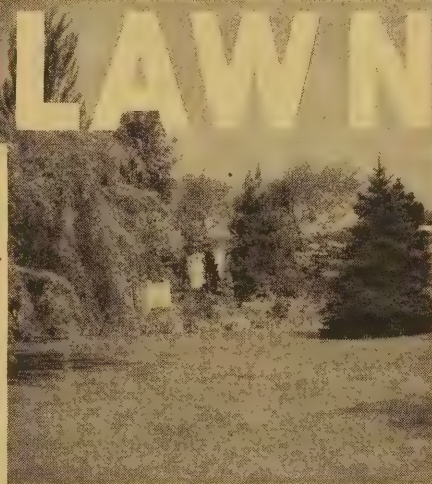

SHUR-GRO GRASS MIXTURE

Though less expensive than our Supreme Lawn Seed, this mixture gives very good results. It will produce a quick cover of green grasses. This mixture contains some White Dutch Clover. High germinating and free from chaff. Postpaid: 1 lb., \$1.35; 3 lbs., \$3.75; 5 lbs., \$6.00.

GRASS STAYS SHORT

when sprayed with STOP-GRASS! New chemical discovery keeps your grass edges short and trim looking, beautifully green. It won't have to be cut again for MONTHS!
1 1/2 oz. (for 400 sq. ft.) \$1.00
4 oz. (for 1100 sq. ft.) 2.25
1 lb. (for 4400 sq. ft.) 6.95

There is nothing that will enhance the attractiveness, and add to the value of a home more than a well planned and well kept lawn.

BERRY'S SYLVAN FOR SHADY AREAS

This contains grasses naturally adapted to growing in shade, such as Chewings Fescue and Poa Trivialis. Fine for grounds shaded by trees or buildings. In heavy shade a light application of lime in addition to fertilizer will improve results. This is a dandy mixture. Postpaid: 1 lb., \$1.80; 3 lbs., \$5.25; 5 lbs., \$8.50.

WHITE DUTCH LAWN CLOVER

The small white clover so popular for lawns. This may be mixed with any lawn grass you have on hand or sown on an old lawn in the early spring. Very drought resistant. Helps soil fertility. Seed is very small. A pound sows 1,000 or more square feet, depending on how heavy percentage of clover is desired. Postpaid: 1 lb., \$1.25; 3 lbs., \$3.30; 5 lbs., \$5.25; 10 lbs., \$10.00.

Seed

EXTRA FANCY KENTUCKY BLUE GRASS See also page 17

Most satisfactory all purpose lawn grass for the entire U. S. except for extreme southern areas where Bermuda grass will do better. Stands drought. Makes excellent turf. Grows from early spring to late fall. Postpaid: 1 lb. \$2.00; 3 lbs. \$5.85; 5 lbs. \$9.50; 10 lbs. \$18.00.

OTHER GRASSES FOR LAWN

CHEWINGS FESCUE. Does well on any kind of soil. Produces a fine firm matted turf. Plant spreads by a development of new shoots and a single plant often covers an area several feet in diameter. Sow 1 lb. to 200 square feet. Postpaid: 1 lb., \$1.05; 3 lbs., \$2.70; 5 lbs., \$4.25.

CREeping RED FESCUE. Fine round bladed grass, and has a deep green color. This grass thrives on all types of soil. It maintains its color the year round and is excellent for shady places. Can withstand wear and will not winter kill. Ideal for lawns and playgrounds. Very hardy, slightly red at the base. Sow 1 lb. to 150 square feet. Postpaid: 1 lb. \$1.05; 3 lbs. \$2.70; 5 lbs. \$4.25.

ILLAHEE FESCUE. A new strain of creeping red, spreading from the roots, creeping under the ground. The texture is fine and the color delightful green. This strain is desirable for areas subject to heavy wear. Should be sown with a nurse crop. Postpaid: 1 lb. \$1.50; 3 lbs. \$4.20; 5 lbs. \$6.25.

HIGHLAND BENT. A popular grass for golf courses. Also used as a lawn grass. Makes a beautiful lawn. Rain will not wash ditches in your terrace, or your sidewalk will not be covered with dirt if you use bent grass. Sow 1 lb. to 200 square feet. Postpaid: 1 lb., \$1.50; 3 lbs. \$4.20; 5 lbs., \$6.25.

RED TOP. A fine blade grass that succeeds on most any soil. Does best under moist conditions. Used in almost all lawn mixtures. Sow 1 lb. to 200 square feet. Postpaid: 1 lb., \$1.50; 3 lbs. \$4.20; 5 lbs., \$6.25.

RYE GRASS. Provides green growth while other grasses are getting started. Used in most lawn mixtures as a nurse crop and thrives well in most any soil. Sow 1 lb. to 200 square feet. Postpaid: 1 lb., 55c; 3 lbs., \$1.35; 5 lbs., \$2.15.

BERMUDA GRASS. Most valuable grass for the South. Will withstand drouth and the hot summer heat. Makes a beautiful lawn and gives quick results. Unhulled only. Sow 1 lb. to 500 square feet. Postpaid: 1 lb., 80c; 3 lbs., \$2.10; 5 lbs., \$3.25.

Berry's QUALITY NURSERY STOCK is Guaranteed

All NURSERY PRICES ARE PREPAID Save an Extra 20%

Berry's guaranteed nursery stock is grown by experts, wherever possible in northern sections for extra-hardiness. Transplanted, pruned and root pruned, to insure sturdy, well rooted, well branched plants that will thrive anywhere. Do not be misled by claims of superior quality—we offer high quality at very low prices.

If you can not plant your stock when you receive it, dig a shallow trench or hole, lay the water thoroughly, then rake some dry soil over the top. Keep moist but not water-plants in this, covering the roots with earth. When planting be sure the holes are plenty large to allow full spread of the roots. Sprinkle fine top soil around the roots, logged until growing.

For better success, a trial package of GRO-STUF will be enclosed with each spring order of nursery stock. See page 38 for larger quantities.

LIBERAL GUARANTEE
 Berry's guarantee all their Nursery Stock to be as good or better than described and to reach you in proper planting condition. If not, we will replace it free of charge but you must notify us within 45 days after you receive it. Our Nursery Stock is guaranteed true to name. If proven otherwise we will replace such stock free or refund the exact amount paid us but you should notify us during the first blooming or fruiting season. Vigorous growth depends upon proper planting, pruning, soil, climatic conditions and other factors we can not control. But if any stock does not start growth, we will share the loss with you by replacing such stock at half the catalog price. To take advantage of this very liberal offer, you must notify us before August 1st, next. The half price replacement will be shipped prepaid during the next planting season.

SEEDLING TREES FOR WINDBREAKS

Our tree seedlings are well rooted, for both hardy and vigorous. They are easy to start, planting instructions being furnished. We ship prepaid at proper planting time early in the Spring and guarantee satisfaction.

We suggest planting all sizes of tree seedlings in rows where it is convenient to cultivate them often the first two or three years—rows about 36 inches apart with the seedlings 12 to 24 inches apart in the row—they grow more bushy when planted 24 inches apart. After 2 years, when the trees are well rooted and about 5 feet tall, transplant into permanent location.

Berry's QUALITY FRUITS ARE ALL Prepaid

FINEST QUALITY

Our enviable reputation is built on high quality at low prices—superior values. We have developed the largest business of its kind in the country on this sound policy.

These same high standards prevail in our nursery department. Each and every item is carefully tested before Berry's will put their name behind it. You can order our nursery stock with full confidence that it is accurately and honestly described, that the quality is of the highest and the prices the lowest.

In the fall, we can supply all nursery stock except Cannas, Dahlias, and Gladiolus Bulbs, Peaches, Sweet Cherries, Apricots and Roses. Most kinds of nursery stock can be very successfully planted in the Fall, even in severe climates.

Save Money

ON NURSERY STOCK

NO EXPENSIVE COLOR PHOTOS, BUT EXTRA VALUE

IN EVERY ITEM

WHEN WE SHIP

In the spring, we study the weather reports and ship at the proper planting time in your locality. Don't be alarmed if your shipment is not received on the first warm day, for you may be sure your order is having careful attention.

When spring opens up all over the Central States, we are not always able to ship as promptly as we would like because of the manpower problem. As your order will be shipped as soon as possible, it is not necessary to write us. You may be sure that even in the rush season, your order will be received in time for successful planting.

Strawberries, Cannas, Dahlias, Peonies, Gladiolus and Perennials are shipped separately and not included in the same package with Fruits, Shrubs, etc.

HIGH QUALITY

STRAWBERRY PLANTS

FOR YOUR GARDEN

Here are the best strawberry varieties recommended by several state experiment stations. Exhaustive tests with over 200 varieties were conducted in recent years and covered such features as yield, size, season of maturity, firmness, color, flavor, freezing value and resistance to diseases. It's Berry's for the latest and best in new varieties. Plants are available from October 1 to June 1. Dormant plants through the winter months and late spring. Guaranteed to grow.

JUNE BEARING

No. 4005—SENATOR DUNLAP (Midseason) Old reliable favorite for home or market. Strong, extra hardy grower—heaviest yielder of big solid red berries.

No. 4004—BLAKEMORE (Early) New market berry. Extra vigorous grower, heavy bearer, very drouth resistant, healthy and good plant maker. Recommended for Northern States. Mild flavor, beautiful color, early maturity. For home or market.

No. 4007—PREMIER (Early midseason) Famous for flavor and huge crops in any soil or climate. Berry's plants are true early strain—heavy bearers, big red berries.

No. 4021—ROBINSON (Midseason) An excellent producer over a long fruiting season. Grows about anywhere and is particularly good in light soils. Berries cardinal red color. Good freezing and canning quality.

No. 4017—ARMORE (Late midseason) BIG is the word for Armore. BIG producer, BIG berries, BIG harvest when the other June bearers are through. It proved more productive than other varieties; unrivaled for flavor.

No. 4022—VERMILLION (Early midseason) Vermillion has under-

gone continuous and extensive testing at the University of Illinois. It is tops on the list in quality and attractiveness. Berries medium large, bright red, resistant to Red Stele and Leaf spotting diseases.

No. 4018—BELLMAR (Early midseason) Looking for the best freezing June berry of them all? This is it—BELLMAR. The berry that stood head and shoulders above others in University freezing tests.

No. 4023—WISCONSIN 214 (Early midseason) Here's a rare one... an extra big full bodied berry that rates tops for freezing. Brilliant red in color. Handles well, excellent for canning and preserves.

No. 4020—JUMBO (Trade Mark) (Midseason) Our choice for the All American June bearing. Jumbo has everything the home gardener and commercial grower demand in an all-purpose berry. Deep red all the way through.

No. 4019—CRIMSON FLASH (Early) (Pat. Applied for) Sssh... we're just whispering about this new one. Listed—it's highly productive—its berries are big and wonderfully sweet. Quantity is extremely limited.

BLUEBERRIES

2 FOR \$2.85 POSTPAID

You can now grow these large, sweet, tasty and cultivated blueberries in your own garden. Have plenty of luscious berries for your table, for pies, muffins, etc. Do best in a moist, acid soil. If your soil is sweet you can easily acidify it by the use of peat moss or partially rotted vegetable matter around the plants. The bushes grow 3 to 4 ft. high and should be planted 4 ft. apart in the home garden. Plant at least two varieties for the best fruiting.

No. 6820—**JERSEY**. Extra large, firm, sweet berries. Make delicious blueberry pies. Midseason, 2 yr. plants, 2 for \$2.85; 6 for \$7.50; 3 yr. plants, 2 for \$3.60; 6 for \$9.75.

No. 6819—**RUBEL**. Ripens late. Clusters of large delicious dark blue berries. 2 yr. plants, 2 for \$2.85; 6 for \$7.50; 3 yr. plants, 2 for \$3.60; 6 for \$9.75.

No. 6818—**RANCOCAS**. A good producer of large berries that are sweet and tender. Early to midseason. 2 yr. plants, 2 for \$2.85; 6 for \$7.50; 3 yr. plants, 2 for \$3.60; 6 for \$9.75.

Blueberry Garden: 1 each Jersey, Rubel and Rancocas.

No. 6821—2 yr. plants, 3 for \$3.75.

No. 6822—3 yr. plants, 3 for \$4.75.

GOOSEBERRIES

Delicious for pies, sauce, jelly or canning. Lots of fruit with no work. Extremely hardy, bear every year. Sturdy, well rooted 2 yr. No. 1 plants.

No. 6841—**DOWNING**. Very large, light green, juicy berries of extra quality. Strong, vigorous, hardy. Commercial variety.

Postpaid: 80c each; 5 for \$3.50

No. 6840—PIXWELL GOOSEBERRY

A new, improved variety—very fine quality. Heavy producer. Fruit hangs below branches for easy picking. Postpaid: 95c each; 5 for \$4.25.

No. 6845—GOOSEBERRY GARDEN

2 Downing and 1 Pixwell
3 for \$2.15

We can not make C.O.D. shipments as all nursery stock is shipped direct from our growers.

Quick Crop Berries

These Quick Crop Berry bushes are larger, more mature plants than our regular sized. Extra well rooted, husky bushes that will bear quicker for you. Ideal for the home owner.

No. 6710—**LATHAM RASPBERRY**. 5 for \$1.65; 10 for \$3.00; 25 for \$6.75.

No. 6711—**CUMBERLAND RASPBERRY**. 5 for \$2.35; 10 for \$4.25; 25 for \$9.50.

No. 6817—**ELDORADO BLACKBERRY**. 5 for \$1.15; 10 for \$2.00; 25 for \$4.25.

No. 6834—**RED LAKE CURRANT**. 90c each; 5 for \$3.95.

No. 6847—**DOWNING GOOSEBERRY**. \$1.20 each; 5 for \$5.00.

Blueberries and Black Raspberries available for Spring only.

CURRANTS

Extremely hardy, easy to grow. 2 yr. No. 1 plants that will bear quickly for you. Rich, delicious flavor, makes fine jelly or jam.

Each 5
Prepaid Prices all Currants..... 60c \$2.50
No. 6831—**PERFECTION**. Largest of the reds. Long stems. Beautiful bright red berries. Favorite commercial variety.

No. 6830—**RED LAKE**. The best Red Currant in all climates. The bushes are absolutely hardy, highly productive, and exceedingly vigorous. The extra large red berries are borne on big, well filled clusters, on extra long stems for easy picking. Excellent flavor. Mid-season, but holds on late. Best of all Currants.

No. 6833—**CURRENT GARDEN**
2 Red Lake and 1 Perfection
3 for \$1.35

SHIPPED PREPAID

We ship nursery stock by prepaid parcel post whenever possible. Some trees are too large for Parcel Post and are shipped Prepaid Express. Be sure to give your nearest Express Office address when ordering large sizes.

Raspberries

SAVE WITH SAFETY AT BERRY'S NEW PREPAID PRICES

Order all Grapes in Spring or Fall

BERRY SEED COMPANY Clarinda, Iowa

January 1, 1954 Price List

Special discount of 3% on orders mailed on or before January 20th.

These prices are guaranteed to March 1st., providing a new price list is not mailed before that date. Higher markets are anticipated. We can handle orders more economically before the spring rush and therefore make this special discount from these prices to prompt buyers. Figure your order at prices shown and then take off 3% from the total amount. This will pay the freight for many customers. On orders between January 20th and February 10th, the discount is 2%. After that, no discount.

Prices are F.O.B., Clarinda, Iowa or Streator, Illinois and Marion, Ohio as shown. These are mail order prices. They are a little lower than store prices, so this plus the discount above will more than pay freight on many shipments. Individual store service increases cost a little. See Guarantee of Better Stands and Satisfaction on pages 2, and 33 of our catalog. Address mail to Clarinda, Iowa only. Specify place from which you want seed shipped and remit prices shown for that place. Prices include bags which are weighed in with the seed. Same discounts apply in stores on retail store prices.

Pears

Pears are one of the easiest fruits to grow and thrive in any climate where other fruit grows. Plant at least 2 varieties for good cross-pollination. Douglas, Kieffer, and Parker are blight resistant. Pears can be ordered in Spring or Fall.

Description of Grades below	1-3	4-7	8 or more
Commercial 3/5'			
Home Orchard 4/6'	\$1.40	\$1.30	\$1.20
Quick Crop 5/7'	1.65	1.55	1.45
Giant Size 5/7'	2.15	1.95	1.85
Dwarf Size 3/4'	2.50	2.30	
	2.75	2.60	

No. 6201—BARTLETT. Favorite commercial variety. Heavy bearer of large, juicy, high flavored fruit. Strong growing tree—fairly hardy. GIANT No. 6260. DWARF No. 6215.

No. 6202—DOUGLAS. Best for Middle West. Vigorous and hardy. Often bears second year. Considered blight proof. Fruit large, golden yellow with bluish. Fine texture and flavor.

No. 6203—KIEFFER. Large golden yellow, meaty pear for canning. Tree is extra hardy, blight resistant and bears young. GIANT No. 6261.

No. 6209—PARKER. Fruit is medium to large size. Yellow with a distinct bluish. Fine and tender, sweet, juicy, and full of flavor. Heavy producer. Blight resistant. Extremely hardy, excellent for colder climates.

HOME PEAR ORCHARD

A choice selection for eating, canning, or pickles. Regular grade trees, Commercial and Quick Crop size. One each—Douglas, Bartlett, and Kieffer. No. 6270—3/4', 3 trees.....\$3.45 Prepaid

No. 6271—5/6', 3 trees.....\$5.35 Express Prepaid

\$3.45
PREPAID

No. 6200—MAX-RED BARTLETT PEAR—Patent No. 741. Newest and finest ever! This new, bright red pear is as delicious as it is beautiful. The creamy white flesh is firm, and has more natural sugar content by actual test than the parent Bartlett that we all know. Be one of the first to enjoy this new, delicious pear.

Prepaid Price 3 to 4 ft. trees \$2.50 each; 4 or more \$2.35.

NO. 6220—DWARF MAX-RED BARTLETT PEAR

Same wonderful fruit as described above. Dwarf sized tree. Postpaid Price. \$3.50 each; 4 or more \$3.25.

Cherries

EVERY HOME SHOULD HAVE SOME

SWEET CHERRIES

These varieties are deliciously sweet, and especially adapted for eastern states. Not as hardy as Sour Cherries, so not recommended for severe climates. Order in Spring only.

Prepaid Prices 1-3 4-7 8 or more
Commercial 3/5', 3/4".....\$1.60 \$1.50 \$1.45
Home Orchard 4/6', 5/8".....2.00 1.90 1.80
Quick Crop 5/7', 1/2".....2.35 2.20 2.10

No. 6301—BLACK TARTARIAN. Very large, purplish-black cherries of finest flavor. Rich, juicy. Excellent for eating fresh. Popular in the East.

No. 6303—SCHMIDT'S BIG. New attractive sweet cherry, rich mahogany in color. Grows in clusters. Yields an abundant crop.

No. 6304—YELLOW GLASS. Hardest of all sweet cherries. Golden yellow fruit is juicy and well flavored.

No. 6307—BING. Unusually large, heart-shaped, dark maroon fruit that is extremely attractive for market. Flesh is firm and juicy, full of rich, delicious flavor. Vigorous grower. Ripens in late June.

SOUR CHERRIES

These varieties are hardy anywhere and bear young. A big profit crop used for eating, canning, preserves and pies. 8 or more

Prepaid Prices 1-3 4-7
Commercial 3/4', 1/2".....\$1.40 \$1.30 \$1.20
Home Orchard 4/4 1/2', 1/2".....1.70 1.60 1.50
Quick Crop 4 1/2/5', 1/2".....2.15 2.00 1.90

No. 6308—EARLY RICHMOND. The favorite early cherry. The fruit is bright red, juicy and of delicious flavor. Hardy, prolific grower, heavy producer.

No. 6310—LARGE MONTMORENCY. Does well everywhere. Extra hardy, it bears large crops regularly ripening 10 days after Early Richmond. Very large fruit, firm flesh and finest flavor.

GIANT SIZE CHERRY TREES

No. 6361—MONTMORENCY—Sour Cherry
No. 6362—BING—Sweet Cherry
Prepaid Price 7/8" to 1" Dia. Trees \$2.65 ea.

Plums

2 YEARS \$1.20 IN LOTS OF 8
3 TO 4 FT. 1 Each

European and Japanese Group

These favorite varieties are not as hardy as American varieties so they are especially suited for states east of Illinois. Fine for eating or market. Plant at least 2 for proper cross pollination.

No. 6506—ITALIAN BLUE PRUNE. Old favorite Italian dark blue Prune Plum. Juicy and well flavored. Excellent for eating fresh or canning. Not used for jelly.

No. 6507—GREEN GAGE. Large sweet yellowish green fruit. Juicy and tasty for eating fresh or canning. One of the best late Plums. Stemmy cling stone.

No. 6508—STANLEY PRUNE. The most profitable Plum for Commercial or Home Orchard. Earliest, hardest European variety. Consistent bearer of large, blue, richly full flavored fruit. Freestone, sub-acid.

Hardy American Varieties

No. 6500—SUPERIOR. Qualities of California Plums, extra hardy, will quickly bear large crops. The huge dark red plums have juicy, full flavored tender yellow meat. Best for eating fresh, canning or plum butter. Giant Size No. 6566 (5/7', 3/4") \$2.35 each. Prepaid.

No. 6501—RED WING. An unusually large, dull red Plum developed in Minnesota. Flesh is rich, yellow, firm, juicy and sweet. Fine for eating or canning.

No. 6502—UNDERWOOD. Freestone. Extra large, deep red fruit. Ripens early and bears large crops. Very hardy.

No. 6504—TOKA. Highly recommended as a pollinizer for other Plums. Fruit is quite large and freestone. Apricot color with firm yellow, rich flavored flesh. Very hardy.

No. 6525—PIPESTONE. Very large, red fruit. Firm, juicy plums with a wonderful flavor. Extra hardy, ripens early and yields heavily.

PREPAID PRICES ON ALL PLUMS

	1-3	4-7	8 or more
Commercial 3/4', 1/2".....	\$1.35	\$1.25	\$1.20
Home Orchard 4/6', 5/8".....	1.65	1.55	1.50
Quick Crop 5/7', 1/2".....	2.10	1.90	1.80

GIANT FRUIT TREES

These are larger than regular sizes. Have grown at least 3 yrs. in the nursery, making them extra well rooted and branched. Will bear 2 to 3 years, quicker than regular size.

DWARF FRUIT TREES

Low growing compact trees. Fine for limited space, growing only 8 to 10 ft. tall. Same fruit as larger growing trees. 3/4 ft. tall. 1/2 inch trunk diameter.

HOME PLUM ORCHARD

A selection of three hardy plums for eating, home canning and preserving. Selected to insure proper pollination and long season bearing. 1 each of Toka, Underwood, Red Wing. Read description at right.

All Apples Can Be Shipped in Spring or Fall

The Apples that can be furnished in Dwarf or Giant size have the lot number shown in descriptions below. See opposite column and page 60 for information on these special sizes.

WINTER APPLES

No. 6107—**DELICIOUS YELLOW.** GIANT NO. 6169. Considered even better than Red Delicious. Superior in flavor, texture, and keeping qualities. The very best golden apple.

No. 6108—**DELICIOUS NEW RED.** GIANT NO. 6160, DWARF NO. 6145. America's Sweetheart! Supreme in flavor and keeping qualities. Young bearing. Thrive anywhere.

No. 6104—**McINTOSH, RED.** DWARF NO. 6147. GIANT NO. 6165. Extra hardy, strong long lived trees. Fruit uniformly well shaped and colored. Juicy, full flavored. Especially recommended for Northern States.

No. 6112—**STAYMAN'S WINESAP.** GIANT NO. 6166. The extra large, hardy Winesap. Fine for eating or cooking. Good keeper.

No. 6118—**NORTHWEST GREENING.** Keeps until spring. Excellent for eating or cooking after Xmas. Bears young.

No. 6116—**JONATHAN—DARK RED.** DWARF NO. 6149. Most profitable apple in many localities. Heavy, consistent bearer of rich, juicy, tart, good keeping apples.

No. 6111—**RED ROME BEAUTY.** Large, juicy, pleasantly flavored red winter apple. Excellent for eating or cooking. Good keeper. Vigorous, hardy, and a heavy yielder. Bears young.

No. 6101—**CRIMSON WINESAP.** Large, very dark red, full flavored. Excellent for eating or cooking. Best for late storage. Best Winesap for home or commercial orchards.

No. 6103—**GRIMES GOLDEN.** Golden yellow apple with firm, white flesh, and sparkling, cidery flavor. Not recommended in severe climates.

SUMMER APPLES

No. 6102—**DUCHESS.** Best and hardiest red summer apple. Tart. Fine for cooking, sauce, pies, apple butter, etc.

No. 6119—**ANOKA.** An extra hardy variety, bears young. Bright yellow fruit striped with red. Excellent for cooking. Often bears 2 or 3 years after planting.

No. 6123—**RED JUNE.** A very good early summer sweet red apple. Perfectly hardy. Fruit is bright red with crisp, white flesh. Excellent for eating and cooking.
